Introduction

The **iMX6 Quad COM Board** provides a quick and easy solution for implementing a high-performance ARM quad-core Cortex-A9 based design. The system is ideal for running an OS like **Linux**.
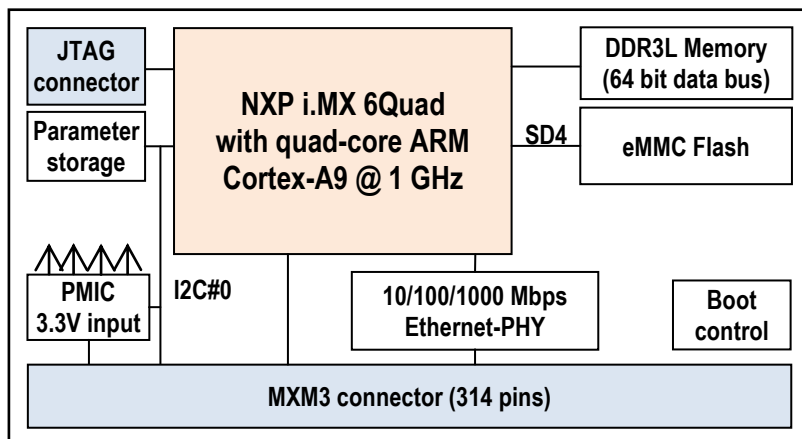

The i.MX 6Quad supports **2D/3D graphical acceleration** and has multiple display outputs (RGB, LVDS, HDMI and MIPI-DSI).
The design has a **low-power implementation** with DDR3L memories and a PMIC supporting DVFS techniques, making the board ideal for portable applications. Other typical applications are graphical interface solutions, communication solutions and connected real-time systems.
