Overview

The Z8 Encore! XP[®] F08xA Series Flash microcontrollers are based on the ZiLOG's eZ8 CPU. The Z8 Encore! XP[®] F08xA Series MCU family of devices sets a new standard of performance and on-chip peripherals. The Z8 Encore! XP[®] F08xA Series devices support 8 KB of Flash program memory and 1 KB register RAM.

The Z8 Encore! XP[®] F08xA Series features 10-bit sigma-delta analog-to-digital converter (ADC). The ADC facilitates up to 8 single-ended/differential channels of 10-bit A/D conversion with 1x or 20x differential input gain and a transimpedance amplifier for current measurement.

An on-chip temperature sensor allows die temperature measurement over a range of -40°C to $+105^{\circ}\text{C}$. These devices include two enhanced 16-bit reloadable timers. These timers featuring PWMs and Capture and Compare. Up to 18 vectored interrupts with programmable priorities provide increased application flexibility.

The Z8 Encore! XP[®] F08xA Series features an on-chip Internal Precision Oscillator (5 MHz/32 KHz) as a trimmable clock source that requires no external components. The new single-pin on-chip debugger and programming interface simplifies code development and allows for easy in-circuit programming.

The full-duplex UART provides serial communications and IrDA encoding and decoding capability. The UART baud rate generator (BRG) can be configured and used as a basic 16-bit timer.
