AON7804

30V Dual N-Channel MOSFET

General Description

The AON7804 is designed to provide a high efficiency synchronous buck power stage with optimal layout and board space utilization. It includes two low $R_{DS(ON)}$ MOSFETs in a dual DFN3x3 package. The AON7804 is well suited for use in compact DC/DC converter applications.

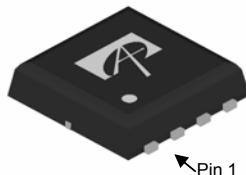

Product Summary

V_{DS}	30V
I_D (at $V_{GS}=10V$)	22A
$R_{DS(ON)}$ (at $V_{GS}=10V$)	< 21mΩ
$R_{DS(ON)}$ (at $V_{GS} = 4.5V$)	< 26mΩ

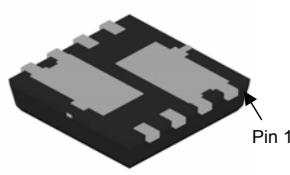

100% UIS Tested
100% R_g Tested
ESD protected

A. The value of R_{IA} is measured with the device mounted on 1 in² FR-4 board with 2oz. Copper, in a still air environment with $T_A=25^\circ\text{C}$. The Power dissipation P_{DSM} is based on R_{IA} t $\leqslant 10\text{s}$ value and the maximum allowed junction temperature of 150°C . The value in any given application depends on the user's specific board design.

B. The power dissipation P_D is based on $T_{J(\text{MAX})}=150^\circ\text{C}$, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

C. Repetitive rating, pulse width limited by junction temperature $T_{J(\text{MAX})}=150^\circ\text{C}$. Ratings are based on low frequency and duty cycles to keep initial $T_J=25^\circ\text{C}$.

D. The R_{IA} is the sum of the thermal impedance from junction to case R_{AJC} and case to ambient.

E. The static characteristics in Figures 1 to 6 are obtained using <300 μs pulses, duty cycle 0.5% max.

F. These curves are based on the junction-to-case thermal impedance which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of $T_{J(\text{MAX})}=150^\circ\text{C}$. The SOA curve provides a single pulse rating.

G. The maximum current rating is package limited.

H. These tests are performed with the device mounted on 1 in² FR-4 board with 2oz. Copper, in a still air environment with $T_A=25^\circ\text{C}$.
