

MPZ Auto Series Ferrite Bead Kit

Automotive Grade Ferrite Power Chip Bead Kit

The TDK MPZ Series ferrite power chip beads are used to suppress noise in **power** supply circuits. They are effective at reducing noise simply by being placed into the circuit in series. Multilayer chip beads consist of ferrite material and a conductive paste layered together. Static characteristics of a chip bead are typically described as the impedance value Z at a frequency of 100MHz. While several different chip beads could have the same impedance value at 100MHz, it is important to look at their individual frequency characteristics to determine which bead will work best for the circuit within the required frequency range. TDK offers several material types which provide various frequency characteristics for the MPZ series chip beads.

Features

- Noise reduction solution for power line
- Has low direct current resistance for compatibility with large currents, optimal for low power consumption
- Conforms to RoHS directive, halogen free, & compatible with lead-free soldering
- Standard operating temperature range of -55°C to $+125^{\circ}\text{C}$
- Storage temperature range of -55°C to $+125^{\circ}\text{C}$ (after PC board mounting)

Applications

- Various ECUs
- Powertrains
- Body Controls
- Car Multimedia (Telematics)

Automotive

AEC-Q200

Power Line

MPZ Auto Series Ferrite Chip Bead Kit Includes:

Case Size	Impedance	DC Resistance	Current Rating	Pieces/Reel	Kit Quantity
1608	26-1000 Ω	0.007-0.300 Ω max.	6.0-0.8A max.	4,000	20 pieces per value
2012	30-1000 Ω	0.010-0.150 Ω max.	6.0-1.5A max.	4,000	20 pieces per value
