

## 4-line ESD protection for high speed lines

μQFN-10L package

Functional schematic (top view)

### Product status

HSP061-4M10

### Features

- Flow-through routing to keep signal integrity
- Ultralarge bandwidth: 8.7 GHz
- Ultralow capacitance: 0.3 pF
- Very Low dynamic resistance: 0.48 Ω
- Low leakage current: 70 nA at 25 °C
- 100 Ω differential impedance
- Extended operating junction temperature range: -40 °C to 150 °C
- Thin package: 0.5 mm max.
- RoHS compliant
- High ESD robustness of the equipment
- Suitable for high density boards
- Complies with following standards:
  - MIL-STD 883G Method 3015-7 Class 3B: – 8 kV
  - IEC 61000-4-2 level 4: 8 kV (contact discharge), 15 kV (air discharge)

### Applications

The HSP061-4M10 is designed to protect against electrostatic discharge on sub micron technology circuits driving:

- HDMI 1.3 and 1.4
- USB3.0
- Digital Video Interface
- Display Port
- Serial ATA
- Thunderbolt

### Description

The HSP061-4M10 is a 4-channel ESD array with a rail to rail architecture designed specifically for the protection of high speed differential lines.

The ultralow variation of the capacitance ensures very low influence on signal-skew. The large bandwidth make the device compatible with 3.4 Gbps.

The device is packaged in μQFN 2.5 mm x 1 mm with a 500 μm pitch, which minimizes the PCB area.

## 2 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com). ECOPACK® is an ST trademark.

### 3 Recommendation on PCB assembly

**Figure 13.  $\mu$ QFN-10L dimension definitions**

#### 3.1 Solder paste

1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
2. “No clean” solder paste is recommended.
3. Offers a high tack force to resist component movement during high speed.
4. Solder paste with fine particles: powder particle size is 20-45  $\mu\text{m}$ .

#### 3.2 Placement

1. Manual positioning is not recommended.
2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
3. Standard tolerance of  $\pm 0.05$  mm is recommended.
4. 3.5 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

### 3.3 PCB design preference

1. To control the solder paste amount, the closed via is recommended instead of open vias.
2. The position of tracks and open vias in the solder area should be well balanced. A symmetrical layout is recommended, to avoid any tilt phenomena caused by asymmetrical solder paste due to solder flow away.

### 3.4 Reflow profile

Figure 15. ST ECOPACK® recommended soldering reflow profile for PCB mounting

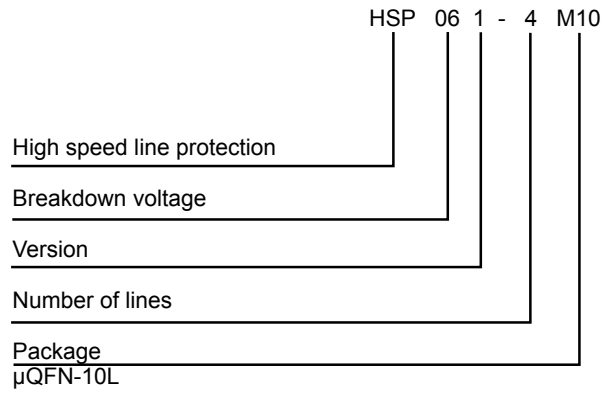

Note: Minimize air convection currents in the reflow oven to avoid component movement.

Note: Maximum soldering profile corresponds to the latest IPC/JEDEC J-STD-020.
