

150mA Low Supply Current LDO REGULATOR

No. EA-239-220328

OUTLINE

The RP110x Series is a voltage regulator (LDO) IC, which has been developed using the CMOS process technology, with high output voltage accuracy, ultra-low supply current, and low ON-resistance transistor. The IC contains the following components: a voltage reference unit, an error amplifier, a resistor-net for output voltage setting, a current limit circuit for preventing short-circuit, a soft-start circuit, and a chip enable circuit.

By minimizing the supply current to 1 μ A, the IC is able to prolong the battery life of each system. The external capacitor is 0.1 μ F with phase compensation. The IC also has a constant slope circuit as a soft-start circuit, which does not require any external capacitor. It minimizes the inrush current and prevents the output voltage overshoot at the start-up.

In addition to the small packaged SOT-23-5 and SC-88A, the RP110x Series offers the ultra-small DFN(PL)0808-4 package and DFN1010-4, which enables the high density mounting of LDO regulator.

FEATURES

- Supply Current Typ. 1.0 μ A
(Except the current through CE pull down circuit)
- Standby Current Typ. 0.1 μ A
- Dropout Voltage Typ. 0.28V ($I_{OUT}=150mA$, $V_{OUT}=2.8V$)
- Output Voltage Accuracy $\pm 1.0\%$
- Temperature-Drift Coefficient of Output Voltage ... Typ. $\pm 100ppm/^{\circ}C$
- Line Regulation Typ. 0.02%/V
- Packages DFN(PL)0808-4, DFN1010-4,
SC-88A, SOT-23-5
- Input Voltage Range 1.4V to 5.25V
- Output Voltage Range 0.8V to 3.6V (0.1V steps)
(For other voltages, please refer to MARK INFORMATION.)
- Built-in Fold Back Protection Circuit Typ. 50mA (Current at short mode)
- Ceramic capacitors are recommended to be used with this IC 0.1 μ F or more
- Built-in Constant Slope Circuit

APPLICATIONS

- Power source for portable communication equipment.
- Power source for electrical appliances such as cameras, VCRs and camcorders.
- Power source for battery-powered equipment.

BLOCK DIAGRAMS

SELECTION GUIDE

The output voltage, chip enable circuit, auto discharge function, package for the ICs can be selected at the user's request.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
RP110Kxx1*-TR	DFN(PL)0808-4	10,000 pcs	Yes	Yes
RP110Lxx1*-TR	DFN1010-4	10,000 pcs	Yes	Yes
RP110Qxx2*-TR-FE	SC-88A	3,000 pcs	Yes	Yes
RP110Nxx1*-TR-FE	SOT-23-5	3,000 pcs	Yes	Yes

xx: Output voltage (V_{OUT}) is selectable from 0.8V to 3.6V in 0.1V increments.
The second decimal point is described as below.

Ex. 1.25V: RP110x12xx5

2.85V: RP110x28xx5

*: Selections of CE pin and Auto-discharge function are as shown below.

B: CE "H" active, Auto-discharge function: No

C: CE is unavailable, Auto-discharge function: No

D: CE "H" active, Auto-discharge function: Yes

PIN CONFIGURATIONS

• DFN(PL)0808-4

• DFN1010-4

• SC-88A

• SOT-23-5

PIN DESCRIPTIONS

• DFN(PL)0808-4

Pin No	Symbol	Pin Description
1	V_{OUT}	Output Pin
2	GND	Ground Pin
3	CE / NC	Chip Enable Pin ("H" Active) / No connection
4	V_{DD}	Input Pin

*) Tab is GND level. (They are connected to the reverse side of this IC.)

The tab is better to be connected to the GND, but leaving it open is also acceptable.

• DFN1010-4

Pin No.	Symbol	Description
1	V_{OUT}	Output Pin
2	GND	Ground Pin
3	CE / NC	Chip Enable Pin ("H" Active) / No connection
4	V_{DD}	Input Pin

*) Tab is GND level. (They are connected to the reverse side of this IC.)

The tab is better to be connected to the GND, but leaving it open is also acceptable.

● SC-88A

Pin No.	Symbol	Description
1	CE / NC	Chip Enable Pin ("H" Active) / No connection
2 *	NC	No connection
3	GND	Ground Pin
4	V _{OUT}	Output Pin
5	V _{DD}	Input Pin

*) Pin No. 2 is connected to the bottom of the IC. It is recommended that the pin be connected to the ground plane on the board, or otherwise be left floating so that there is no contact with other potentials.

● SOT-23-5

Pin No	Symbol	Pin Description
1	V _{DD}	Input Pin
2	GND	Ground Pin
3	CE / NC	Chip Enable Pin ("H" Active) / No connection
4	NC	No Connection
5	V _{OUT}	Output Pin

ABSOLUTE MAXIMUM RATINGS

Symbol	Item	Rating	Unit	
V _{IN}	Input Voltage	6.0	V	
V _{CE}	Input Voltage (CE Pin)	6.0	V	
V _{OUT}	Output Voltage	-0.3 to V _{IN} +0.3	V	
I _{OUT}	Output Current	180	mA	
P _D	Power Dissipation*	DFN(PL)0808-4 Standard Land Pattern	286	mW
		DFN1010-4 JEDEC STD. 51	1000	
		SC-88A Standard Land Pattern	380	
		SOT-23-5 JEDEC STD. 51	660	
T _{opt}	Operating Temperature Range	-40 to 85	°C	
T _{stg}	Storage Temperature Range	-55 to 125	°C	

*) For Power Dissipation, please refer to PACKAGE INFORMATION.

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

ELECTRICAL CHARACTERISTICS

Unless otherwise noted,

$V_{IN} = \text{Set } V_{OUT} + 1.0V$ ($V_{OUT} > 1.5$), $V_{IN} = 2.5V$ ($V_{OUT} \leq 1.5V$), $I_{OUT} = 1mA$, $C_{IN} = C_{OUT} = 0.1\mu F$.

The specifications surrounded by are guaranteed by Design Engineering at $-40^{\circ}C \leq T_a \leq 85^{\circ}C$.

RP110xxxxx

$T_a=25^{\circ}C$

Symbol	Item	Conditions	Min.	Typ.	Max.	Unit	
V_{OUT}	Output Voltage	$T_a = 25^{\circ}C$	$V_{OUT} > 2.0V$	$\times 0.99$		$\times 1.01$	V
			$V_{OUT} \leq 2.0V$	-20		20	mV
		$-40^{\circ}C \leq T_a \leq 85^{\circ}C$	$V_{OUT} > 2.0V$	× 0.97		× 1.025	V
			$V_{OUT} \leq 2.0V$	-60		50	mV
I_{OUT}	Output Current		150			mA	
$\frac{\Delta V_{OUT}}{\Delta I_{OUT}}$	Load Regulation	$1mA \leq I_{OUT} \leq 150mA$	-20	0	20	mV	
V_{DIF}	Dropout Voltage	Please refer to "Dropout Voltage".					
I_{SS}	Supply Current	$I_{OUT} = 0mA$		1	2.0	μA	
Istandby	Standby Current	$V_{CE} = 0V$		0.1	1.0	μA	
$\frac{\Delta V_{OUT}}{\Delta V_{IN}}$	Line Regulation	Set $V_{OUT} 0.5V \leq V_{IN} \leq 5.0V$		0.02	0.10	%/V	
V_{IN}	Input Voltage *		1.4		5.25	V	
$\frac{\Delta V_{OUT}}{\Delta T_a}$	Output Voltage Temperature Coefficient	$-40^{\circ}C \leq T_a \leq 85^{\circ}C$		± 100		ppm/ $^{\circ}C$	
I_{SC}	Short Current Limit	$V_{OUT} = 0V$		50		mA	
I_{CE}	CE Pull-down Current (Only applied to B/D versions)			0.3		μA	
V_{CEH}	CE input Voltage "H" (Only for B/D versions)		1.0			V	
V_{CEL}	CE Input Voltage "L" (Only applied to B/D versions)				0.4	V	
R_{LOW}	LOW Output Nch ON Resistance (Only applied to D version)	$V_{IN} = 4.0V, V_{CE} = 0V$		60		Ω	

All test categories were tested on the products under the pulse load condition ($T_j \approx T_a = 25^{\circ}C$) except "Output Voltage Temperature Coefficient".

*) The maximum input voltage (electrical characteristics) is 5.25V. In case of exceeding this value, the maximum input voltage cannot be over 5.5V and the total operating time has to be within 500hrs.

The specifications surrounded by are guaranteed by Design Engineering at $-40^{\circ}\text{C} \leq T_a \leq 85^{\circ}\text{C}$.

• Dropout Voltage

$T_a=25^{\circ}\text{C}$

Output Voltage V_{OUT} (V)	Dropout Voltage V_{DIF} (V)		
	Condition	Typ.	Max.
$0.8 \leq V_{\text{OUT}} < 0.9$	$I_{\text{OUT}}=150\text{mA}$	0.96	1.40
$0.9 \leq V_{\text{OUT}} < 1.0$		0.87	1.25
$1.0 \leq V_{\text{OUT}} < 1.2$		0.78	1.15
$1.2 \leq V_{\text{OUT}} < 1.4$		0.64	1.00
$1.4 \leq V_{\text{OUT}} < 1.7$		0.52	0.80
$1.7 \leq V_{\text{OUT}} < 2.0$		0.40	0.60

$2.5 \leq V_{\text{OUT}} < 3.0$		0.28	0.40
$3.0 \leq V_{\text{OUT}} \leq 3.6$		0.25	0.35

RECOMMENDED OPERATING CONDITIONS (ELECTRICAL CHARACTERISTICS)

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

TYPICAL APPLICATION

(External Components)

C2 0.1 μ F MURATA: GRM155B31C104KA87B

TECHNICAL NOTES

When using these ICs, consider the following points:

Phase Compensation

In these ICs, phase compensation is made for securing stable operation even if the load current is varied. For this purpose, use a capacitor C2 with good frequency characteristics and ESR (Equivalent Series Resistance). (Note: If additional ceramic capacitors are connected with parallel to the output pin with an output capacitor for phase compensation, the operation might be unstable. Because of this, test these ICs with as same external components as ones to be used on the PCB.)

PCB Layout

Make V_{DD} and GND lines sufficient. If their impedance is high, noise pickup or unstable operation may result. Connect a capacitor C1 with a capacitance value as much as 0.1 μ F or more between V_{DD} and GND pin, and as close as possible to the pins.

Set external components, especially the output capacitor C2, as close as possible to the ICs, and make wiring as short as possible.

CONSTANT SLOPE CIRCUITS

The RP110x Series is equipped with a constant slope circuit as a soft-start circuit, which allows the output voltage to start up gradually when the CE is turned on.

The constant slope circuit minimizes the inrush current at the start-up and also prevents the overshoot of the output voltage.

The capacitor to create the start-up slope is built in the IC that does not require any external components. The start-up time and the start-up slope angle are fixed inside the IC.

If the capacitance of the external output capacitor (C_{OUT}) becomes more than the certain capacitance, the output current limit circuit minimizes the incoming current of the output capacitor at the start-up. As a result, the start-up time becomes longer and the start-up slope angle becomes more gentle. As “Inrush Current Characteristics Example” below shows, if the C_{OUT} is less than $4.7\mu\text{F}$, the constant slope circuit easily starts to function at the start-up, likewise, if the C_{OUT} is over $10\mu\text{F}$, the output current limit circuit easily starts to function at the start-up. The boundary point of using these two circuits is inversely proportional to the output voltage. If the output voltage is higher, the output current limit circuit easily starts to function even if the C_{OUT} capacitance is small. For more details, please refer to the graph 14 of “Inrush Current Characteristics Example”.

Inrush Current Characteristics Example ($C_1=\text{none}$, $I_{OUT}=0\text{mA}$, $T_{opt}=25^\circ\text{C}$)

PACKAGE INFORMATION

• Power Dissipation (DFN (PL) 0808-4)

Power Dissipation (P_D) depends on conditions of mounting on board. This specification is based on the measurement at the condition below:

Measurement Conditions:

	Standard Test Land Pattern
Environment	Mounting on Board (Wind velocity=0m/s)
Board Material	Glass cloth epoxy plastic (Double-sided)
Board Dimensions	40mm × 40mm × 1.6mm
Copper Ratio	Top side: Approx. 50%, Back side: Approx. 50%
Through-holes	φ 0.5mm × 24pcs

Measurement Results:

($T_a=25^{\circ}\text{C}$)

	Standard Test Land Pattern
Power Dissipation	286mW ($T_{jmax}=125^{\circ}\text{C}$) 358mW ($T_{jmax}=150^{\circ}\text{C}$)
Thermal Resistance	$\theta_{ja} = (125-25^{\circ}\text{C})/0.286\text{W} = 350^{\circ}\text{C/W}$ $\theta_{jc} = 90^{\circ}\text{C/W}$

Power Dissipation

Measurement Board Pattern

○ IC Mount Area (Unit: mm)

The above graph shows the Power Dissipation of the package under the conditions of $T_{jmax}=125^{\circ}\text{C}$ and $T_{jmax}=150^{\circ}\text{C}$.

The operation of the IC within the shaded range in the graph might have an affect on the IC's lifetime. The operation time of the IC must be remained within the time limit described in the table below.

Operating Time	Estimated Years (Operating four hours/day)
13,000 hours	9 years

● **Power Dissipation (DFN1010-4)**

The power dissipation of the package is dependent on PCB material, layout, and environmental conditions. The following measurement conditions are based on JEDEC STD. 51-7.

Measurement Conditions

Item	Measurement Conditions
Environment	Mounting on Board (Wind Velocity = 0 m/s)
Board Material	Glass Cloth Epoxy Plastic (Four-Layer Board)
Board Dimensions	76.2 mm × 114.3 mm × 0.8 mm
Copper Ratio	Outer Layer (First Layer): Less than 95% of 50 mm Square Inner Layers (Second and Third Layers): Approx. 100% of 50 mm Square Outer Layer (Fourth Layer): Approx. 100% of 50 mm Square
Through-holes	φ 0.2 mm × 11 pcs

Measurement Result

(Ta = 25°C, Tjmax = 125°C)

Item	Measurement Result
Power Dissipation	1000 mW
Thermal Resistance (θ_{ja})	$\theta_{ja} = 100^\circ\text{C/W}$
Thermal Characterization Parameter (ψ_{jt})	$\psi_{jt} = 41^\circ\text{C/W}$

θ_{ja} : Junction-to-Ambient Thermal Resistance
 ψ_{jt} : Junction-to-Top Thermal Characterization Parameter

Power Dissipation vs. Ambient Temperature

● **Power Dissipation (SC-88A)**

Power Dissipation (P_D) depends on conditions of mounting on board. This specification is based on the measurement at the condition below:

Measurement Conditions:

	Standard Land Pattern
Environment	Mounting on Board (Wind velocity=0m/s)
Board Material	Glass cloth epoxy plastic (Double Layers)
Board Dimensions	40mm × 40mm × 1.6mm
Copper Ratio	Top side: Approx. 50%, Back side: Approx. 50%
Through-hole	φ0.5mm × 44pcs

Measurement Results: (Ta=25°C)

	Standard Land Pattern	Free Air
Power Dissipation	380mW (Tjmax=125°C) 475mW (Tjmax=150°C)	150mW
Thermal Resistance	$\theta_{ja}=(125-25^\circ\text{C})/0.38\text{W}=263^\circ\text{C/W}$ $\theta_{jc}=75^\circ\text{C/W}$	$\theta_{ja}=(125-25^\circ\text{C})/0.15\text{W}=667^\circ\text{C/W}$ -

Power Dissipation

Measurement Board Pattern

○ IC Mount Area (Unit: mm)

The above graph shows the Power Dissipation of the package under the conditions of $T_{jmax}=125^\circ\text{C}$ and $T_{jmax}=150^\circ\text{C}$. The operation of the IC within the shaded range in the graph might have an affect on the IC's lifetime. The operation time of the IC must be remained within the time limit described in the table below.

Operating Time	Estimated Years (Operating four hours/day)
13,000 hours	9 years

● **Power Dissipation (SOT-23-5)**

The power dissipation of the package is dependent on PCB material, layout, and environmental conditions. The following measurement conditions are based on JEDEC STD. 51-7.

Measurement Conditions

Item	Measurement Conditions
Environment	Mounting on Board (Wind Velocity = 0 m/s)
Board Material	Glass Cloth Epoxy Plastic (Four-Layer Board)
Board Dimensions	76.2 mm × 114.3 mm × 0.8 mm
Copper Ratio	Outer Layer (First Layer): Less than 95% of 50 mm Square Inner Layers (Second and Third Layers): Approx. 100% of 50 mm Square Outer Layer (Fourth Layer): Approx. 100% of 50 mm Square
Through-holes	φ 0.3 mm × 7 pcs

Measurement Result

(Ta = 25°C, Tjmax = 125°C)

Item	Measurement Result
Power Dissipation	660 mW
Thermal Resistance (θja)	θja = 150°C/W
Thermal Characterization Parameter (ψjt)	ψjt = 51°C/W

θja: Junction-to-Ambient Thermal Resistance

ψjt: Junction-to-Top Thermal Characterization Parameter

Power Dissipation vs. Ambient Temperature

Measurement Board Pattern

ESR vs. Output Current

When using these ICs, consider the following points:

The relations between I_{OUT} (Output Current) and ESR of an output capacitor are shown below.

The conditions when the white noise level is under $40\mu\text{V}$ (Avg.) are marked as the hatched area in the graph.

Measurement conditions

Frequency Band : 10Hz to 2MHz

Temperature : -40°C to 85°C

Hatched Area : Noise level is under $40\mu\text{V}$ (Avg.)

C_{IN}, C_{OUT} : $0.1\mu\text{F}$

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to our sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without the prior written consent of us.
3. This product and any technical information relating thereto are subject to complementary export controls (so-called KNOW controls) under the Foreign Exchange and Foreign Trade Law, and related politics ministerial ordinance of the law. (Note that the complementary export controls are inapplicable to any application-specific products, except rockets and pilotless aircraft, that are insusceptible to design or program changes.) Accordingly, when exporting or carrying abroad this product, follow the Foreign Exchange and Foreign Trade Control Law and its related regulations with respect to the complementary export controls.
4. The technical information described in this document shows typical characteristics and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under our or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death should first contact us.
 - Aerospace Equipment
 - Equipment Used in the Deep Sea
 - Power Generator Control Equipment (nuclear, steam, hydraulic, etc.)
 - Life Maintenance Medical Equipment
 - Fire Alarms / Intruder Detectors
 - Vehicle Control Equipment (automotive, airplane, railroad, ship, etc.)
 - Various Safety Devices
 - Traffic control system
 - Combustion equipment

In case your company desires to use this product for any applications other than general electronic equipment mentioned above, make sure to contact our company in advance. Note that the important requirements mentioned in this section are not applicable to cases where operation requirements such as application conditions are confirmed by our company in writing after consultation with your company.

6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. The products have been designed and tested to function within controlled environmental conditions. Do not use products under conditions that deviate from methods or applications specified in this datasheet. Failure to employ the products in the proper applications can lead to deterioration, destruction or failure of the products. We shall not be responsible for any bodily injury, fires or accident, property damage or any consequential damages resulting from misuse or misapplication of the products.
8. **Quality Warranty**
 - 8-1. **Quality Warranty Period**

In the case of a product purchased through an authorized distributor or directly from us, the warranty period for this product shall be one (1) year after delivery to your company. For defective products that occurred during this period, we will take the quality warranty measures described in section 8-2. However, if there is an agreement on the warranty period in the basic transaction agreement, quality assurance agreement, delivery specifications, etc., it shall be followed.
 - 8-2. **Quality Warranty Remedies**

When it has been proved defective due to manufacturing factors as a result of defect analysis by us, we will either deliver a substitute for the defective product or refund the purchase price of the defective product.
Note that such delivery or refund is sole and exclusive remedies to your company for the defective product.
 - 8-3. **Remedies after Quality Warranty Period**

With respect to any defect of this product found after the quality warranty period, the defect will be analyzed by us. On the basis of the defect analysis results, the scope and amounts of damage shall be determined by mutual agreement of both parties. Then we will deal with upper limit in Section 8-2. This provision is not intended to limit any legal rights of your company.
9. Anti-radiation design is not implemented in the products described in this document.
10. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
11. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
12. Warning for handling Gallium and Arsenic (GaAs) products (Applying to GaAs MMIC, Photo Reflector). These products use Gallium (Ga) and Arsenic (As) which are specified as poisonous chemicals by law. For the prevention of a hazard, do not burn, destroy, or process chemically to make them as gas or power. When the product is disposed of, please follow the related regulation and do not mix this with general industrial waste or household waste.
13. Please contact our sales representatives should you have any questions or comments concerning the products or the technical information.
