Absolute Maximum Ratings^{5,6}

| Parameter | Absolute Maximum |
|-----------------------------------|------------------|
| LO Power | 23 dBm |
| RF or IF Power | 20 dBm |
| Junction Temperature ⁷ | +150°C |

- Exceeding any one or combination of these limits may cause permanent damage to this device.
- MACOM does not recommend sustained operation near these survivability limits.
- Operating at nominal conditions with $T_J \leq +150^\circ\text{C}$ will ensure $\text{MTTF} > 1 \times 10^6$ hours. Thermal resistance, Θ_{JC} is 85°C/W .

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices with the following rating:

HBM Class 1B
CDM Class C5

Assembly Information

- Do not subject the device to excessive force, especially at elevated temperatures $> 60^\circ\text{C}$.
- No-clean flux is required for assembly. Post SMT washing is not recommended.
- Additional handling information is contained on page 6.

No external parts required for operation of MAMX-011035.

Guidelines for Engineering Lab Assembly and Rework replacement

A. Reflow Oven with Brand New PCB

1. Apply paste evenly using screen to new PCB, or use manual dispenser (difficult to apply evenly).
2. Place component on top of solder paste, ensuring correct positioning relative to pin 1.
3. Set reflow oven to required profile for a leadfree paste, see profile in Application Note S2083.
4. Ensure correct speed of the conveyor belt (needs to be checked for a particular oven type).
5. Place remaining parts onto board.
6. Measure board.

B. Replacing Existing Part with Hot Plate - Heat Applied Underneath the PCB

(Recommending using a hot plate with localised heat to the mixer area).

1. Firstly prepare the new MAMX-011035 part to be installed.
2. Flip MAMX-011035 and apply a thin layer of solder on each pad. Ensure an appropriate amount of solder is applied to middle ground paddle also.
3. Next step is to remove existing mixer part already attached to the board.
4. Set the hot plate at 285°C temperature.
5. Place block underneath mixer from base plate to localise heat to mixer area only.
6. Remove existing mixer part when solder reflows.
7. Apply flux to PCB pins and centre ground area.
8. Ensure sufficient solder is visible on pads.
9. Align and position MAMX-011035 to correct position on PCB, relative to pin 1.
10. Observe solder reflow.
11. Then remove PCB from hot plate.
12. Allow to cool and measure.

- **Do not apply heat from above the MAMX-011035 with heat gun.**
- **Post SMT washing is not recommended.**
