

Schmartboard RLC Divider Board

The RLC Divider board was developed to easily implement passive filters and various R, L and C networks. This is accomplished by placing the necessary components on the board and then “programming” the board through the proper placement of shunts. 6 Shunts are included in the package as well as a 49.9 Ohm and 15KOhm Resistor and a 0.1 micro Farad capacitor for your convenience.

Although the schematic component labels indicate, R, C or L, other components, such as diodes, can be used.
