

### INDUSTRY'S LOWEST INPUT CAPACITANCE MONOLITHIC DUAL N-CHANNEL JFET

Absolute Maximum Ratings	
@ 25 °C (unless otherwise stated)	
Maximum Temperatures	
Storage Temperature	-55 to +150°C
Junction Operating Temperature	-55 to +150°C
Maximum Power Dissipation, TA = 25°C	
Continuous Power Dissipation, per side <sup>4</sup>	300mW
Power Dissipation, total <sup>5</sup>	500mW
Maximum Currents	
Gate Forward Current	I <sub>G(F)</sub> = 10mA
Maximum Voltages	
Gate to Source	V <sub>GSS</sub> = 60V
Gate to Drain	V <sub>GDS</sub> = 60V
Features	
Low Noise (f = 1kHz, NBW = 1Hz)	e <sub>n</sub> = 1.8nV/√Hz
Low Input Capacitance	C <sub>iss</sub> = 4pF

\* For equivalent single version, see LSK189

#### Features

- Low Noise: e<sub>n</sub> = 1.8nV/√Hz (typ), f = 1kHz, NBW = 1Hz
- Very Low Common Source Input Capacitance of C<sub>ISS</sub> = 4pF – typ
- High Slew Rate
- Low Offset/Drift Voltage
- Low Gate Leakage I<sub>GSS</sub> and I<sub>G</sub>
- High CMRR 102 dB

#### Benefits

- Tight Differential Voltage Match vs. Current
- Improved Op Amp Speed Settling Time Accuracy
- Minimum Input Error Trimming Error Voltage
- Lower Intermodulation Distortion Due to Low Input Capacitance

#### Applications

- Wideband Differential Amplifiers
- High Speed Temperature Compensated Single Ended Input Amplifier
- High Speed Comparators
- Impedance Converters
- Sonobouys and Hydrophones
- Acoustic Sensors

#### Description

The LSK489 is the industry's lowest input capacitance and low-noise monolithic dual N-Channel JFET. Low input capacitance substantially reduces intermodulation distortion. In addition, these dual JFETs feature tight offset voltage and low drift over temperature range, and are targeted for use in a wide range of precision instrumentation and sensor applications. The LSK489 is available in surface mount plastic SOIC 8L and SOT-23 6L, as well as thru-hole metal TO-71 6L packages. For an equivalent single N-Channel version refer to the LSK189 datasheet. LSK489 TO-71 6L and SOIC 8L are fit, form and pin compatible to the same LSK389 product.

The LSK489 provides a dramatic increase in capabilities for a wide range of low-noise applications. The most significant aspect of the LSK489 is how it combines a noise level nearly as low as the LSK389 while having much lower gate-to-drain capacitance, 4pF versus the 25pF. The slightly higher noise of the LSK489, versus the LSK389, is not significant in most instances, while the much lower capacitance enables designers to produce simpler, more elegant circuit designs with fewer devices that cost less in production. Also notice that the LSK489 and LSK389 TO-71 and SOIC packages are the same and pin compatible, therefore, they can be used interchangeably.

Like the Linear Systems LSK389, the LSK489 features a unique design construction of interleaving both JFETs on the same piece of silicon to provide excellent matching and thermal tracking, as well a low-noise profile having nearly zero popcorn noise. I<sub>BSS</sub> range is divided into two segments providing designers improved resolution, which are A grade (ΔI<sub>BSS</sub> = 6mA) and B grade (ΔI<sub>BSS</sub> = 7mA). Contact Linear Systems for improved E<sub>n</sub>, I<sub>BSS</sub>, V<sub>Gs(off)</sub>, ΔV<sub>Gs</sub> or any other limits. Based on new limits, LS will assign a new SELXXXX code to be used in shipments.

Notes

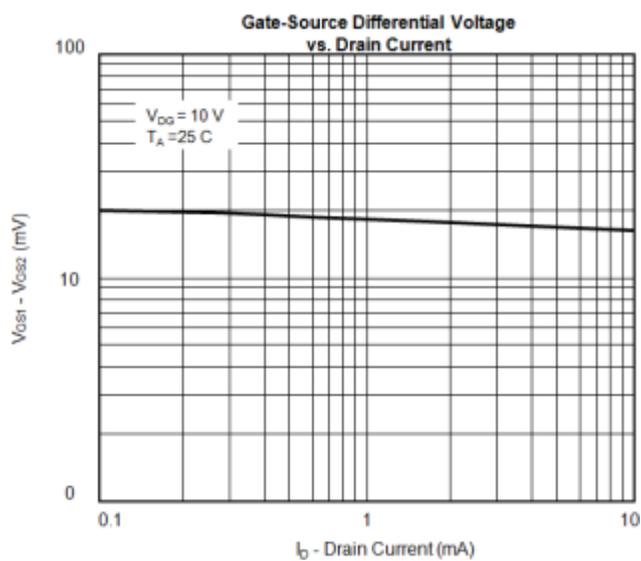

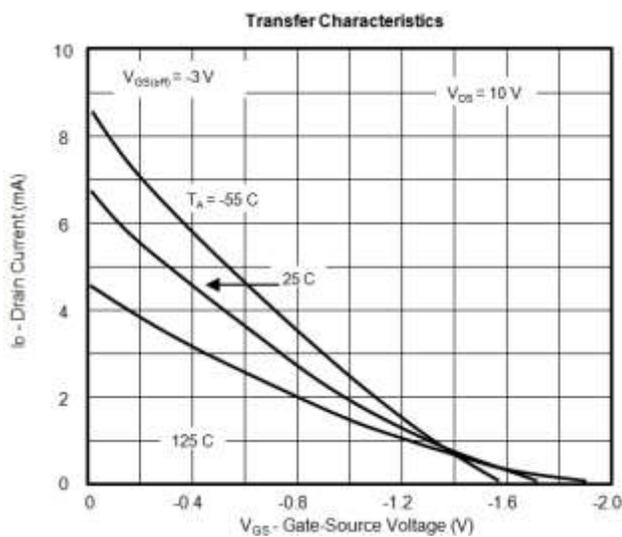

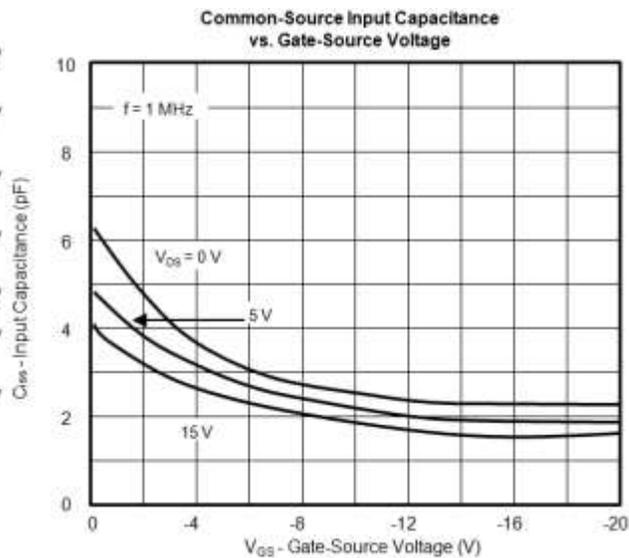

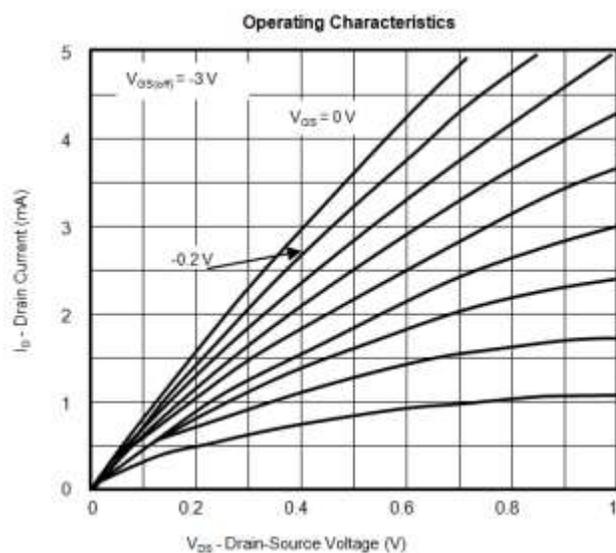

1. Absolute maximum ratings are limiting values above which serviceability may be impaired.
2. Pulse width  $\leq 2$ ms.
3. All MIN/TYP/MAX Limits are absolute values. Negative signs indicate electrical polarity only.
4. Derate 2.4 mW/°C above 25°C.
5. Derate 4 mW/°C above 25°C.
