Evaluating the ADP199 High-Side Load Switch

FEATURES

Ultrasmall, 0.8 mm \times 0.8 mm, 4-ball, 0.4 mm pitch WLCSP Low RDS_{ON} of 40 m Ω Low input voltage range of 0.9 V to 3.6 V 500 mA continuous operating current Operating temperature range: $T_J = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$

GENERAL DESCRIPTION

The ADP199 evaluation board (ADP199CB-EVALZ) is used to demonstrate the functionality of the ADP199 high-side load switch.

Simple device measurements such as $V_{\rm IN}$ to $V_{\rm OUT}$ resistance (RDS_{ON}), ground current, and shutdown current can be demonstrated with only a single voltage source, a voltage meter, a current meter, and a load resistor.

Complete information about the ADP199 high-side load switch is available in the ADP199 data sheet, which should be consulted when using the ADP199CB-EVALZ.

EVALUATION BOARD SCHEMATIC AND HARDWARE

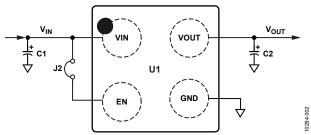

Figure 2. Evaluation Board Schematic

Table 1. Evaluation Board Hardware Components

Component	Function	Description
U1	Load switch	ADP199ACBZ-R7 high-side load switch.
C1	Input capacitor	Input bypass capacitor, 0.1 μF. Optional to improve transient performance. Connect C1 from VIN to GND.
C2	Output capacitor	Output capacitor, 0.1 µF. Optional to improve transient performance. Connect C2 from VOUT to GND.
J2	Jumper	Jumper. Connects EN to VIN for automatic startup.

VIN TO VOUT RESISTANCE (RDSON) MEASUREMENTS

 RDS_{ON} is defined as the input-to-output voltage differential divided by load current. The voltage meter reading divided by the load current value gives the equivalent RDS_{ON} value.

RDSoN can be measured using the configuration shown in Figure 4. For more accurate measurements, a second voltage meter can be used to monitor the input voltage across the input capacitor. The input supply voltage may need to be adjusted to account for IR drops, especially if large load currents are used. Figure 3 shows a typical curve of RDSoN measurements with different load currents.

Follow these steps to connect the evaluation board to a voltage source and voltage meter:

- 1. Connect the negative terminal (–) of the voltage source to the GND pad on the evaluation board.
- 2. Connect the positive terminal (+) of the voltage source to the VIN pad on the evaluation board.
- Connect a load between the VOUT pad and the GND pad on the evaluation board.
- 4. Connect the negative terminal (–) of the voltage meter to the VOUT pad on the evaluation board.

5. Connect the positive terminal (+) of the voltage meter to the VIN pad on the evaluation board.

The voltage source can now be turned on. If J2 is inserted (connecting EN to VIN for automatic startup), the switch powers up.

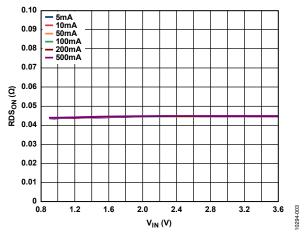

Figure 3. RDSon vs. Input Voltage (VIN)

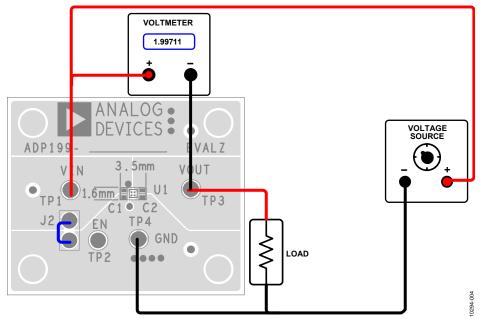

Figure 4. RDS_{ON} Measurement

GROUND CURRENT MEASUREMENTS

Figure 6 shows how the evaluation board can be connected to a voltage source and a current meter (ammeter) for ground current measurements. A resistor can be used as the load for the switch. Ensure that the resistor has a power rating adequate to handle the power expected to be dissipated across it. An electronic load can be used as an alternative.

Ensure that the voltage source used can supply enough current for the expected load levels. If voltage meters are connected at the input or output terminals, subtract the current resulting from the shunt resistance of the voltage meter for accurate ground current measurement.

Follow these steps to connect the evaluation board to a voltage source and current meter:

- 1. Connect the positive terminal (+) of the voltage source to the VIN pad on the evaluation board.
- 2. Connect the positive terminal (+) of the current meter to the GND pad on the evaluation board.
- 3. Connect the negative terminal (–) of the current meter to the negative terminal (–) of the voltage source.
- 4. Connect a load between the VOUT pad on the evaluation board and the negative terminal (–) of the voltage source.

The voltage source can now be turned on. If J2 is inserted (connecting EN to VIN for automatic startup), the switch powers up.

GROUND CURRENT CONSUMPTION

Ground current measurements can determine how much current the internal circuits of the switch consume while the circuits perform the load switch function. To be efficient, the load switch must consume as little current as possible. Figure 5 shows the typical ground current consumption for various load levels.

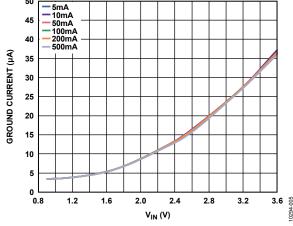

Figure 5. Ground Current vs. Input Voltage (V_{IN})

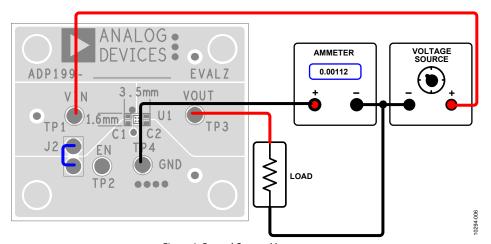

Figure 6. Ground Current Measurement

SHUTDOWN CURRENT MEASUREMENTS

Figure 8 shows how the evaluation board can be connected to a voltage source and a current meter (ammeter) for shutdown current measurements. The current meter can also be connected to the VIN pad to measure the ground current, which is equal to the shutdown current when EN is tied to ground. Figure 7 shows the typical shutdown current consumption for various input voltages.

Follow these steps to connect the evaluation board to a voltage source and current meter:

- 1. Connect the positive terminal (+) of the voltage source to the positive terminal (+) of the current meter.
- 2. Connect the negative terminal (–) of the voltage source to the GND pad and the EN pad on the evaluation board.
- 3. Connect the negative terminal (–) of the current meter to the VIN pad on the evaluation board.

The voltage source can now be turned on.

NOTES

ESD Caution

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Condition

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. "("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the ROHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer, Customer agrees to return to ADI the Evaluation Board at that time, LIMITATION OF LIABILITY, THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTIES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL. SPECIAL. INDIRECT. OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL, ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
