Section 1

Overview

1.1 Scope

The AT91SAM7L-STK rev.A starter kit enables evaluation capabilities and code development of applications running on an AT91SAM7L64/128.

This guide focuses on the AT91SAM7L-STK rev.A board as an evaluation platform.

1.2 Deliverables

The AT91SAM7L-STK rev.A package contains the following items:

- An AT91SAM7L-STK rev.A board
- Two AAA batteries

1.3 The AT91SAM7L-STK Rev. A Starter Board

The board is equipped with an AT91SAM7L128 (128-lead LQFP package) together with the following:

- One DBGU serial communication port
- One ZIGBEE extension connector
- One JTAG/ICE debug interface
- Five user- input push buttons
- One WakeUP input push button
- One Reset Push Button
- One Battery Socket for two AAA batteries
- One 400 segments dot matrix LCD

Section 2

Setting Up the AT91SAM7L-STK Rev. A Board

2.1 Electrostatic Warning

The AT91SAM7L-STK rev.A starter board is shipped in a protective anti-static package. The board must not be subjected to high electrostatic potentials. A grounding strap or similar protective device should be worn when handling the board. Avoid touching the component pins or any other metallic element.

2.2 Requirements

In order to set up the AT91SAM7L-STK rev.A starter board, the following items are needed:

- The AT91SAM7L-STK rev.A starter board
- Two AAA batteries

2.3 Layout

Figure 2-1. AT91SAM7L-STK Rev. A Board Layout

2.4 Powering Up the Board

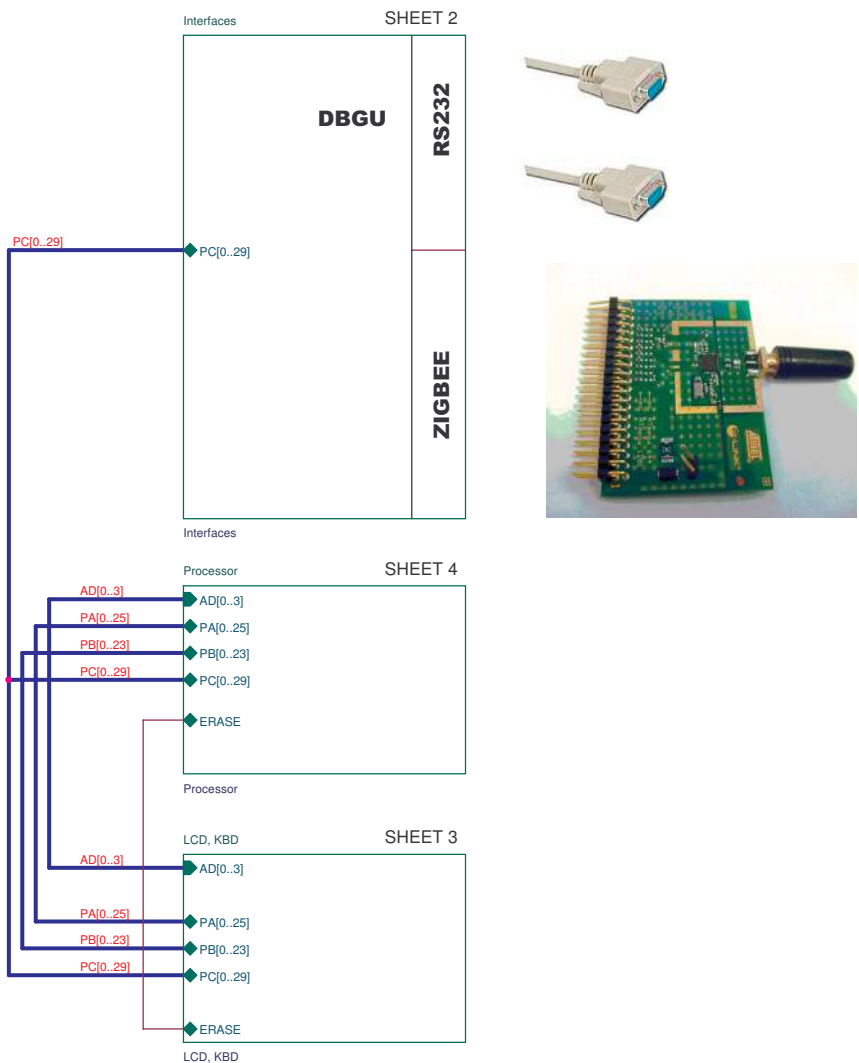

The AT91SAM7L-STK rev.A requires 3.0V (2.2V-3.6V) DC input. The power is supplied to the board via 2 AAA batteries or 3.0V VCC pads.

2.5 Getting Started

Please refer to the [AT91SAM product pages on the Atmel web site](#), for the most up-to-date information on getting started with the AT91SAM7L-STK rev.A.

2.6 AT91SAM7L-STK Rev. A Block Diagram

Figure 2-2. AT91SAM7L-STK Block Diagram

3.1 AT91SAM7L64/128 Microcontroller

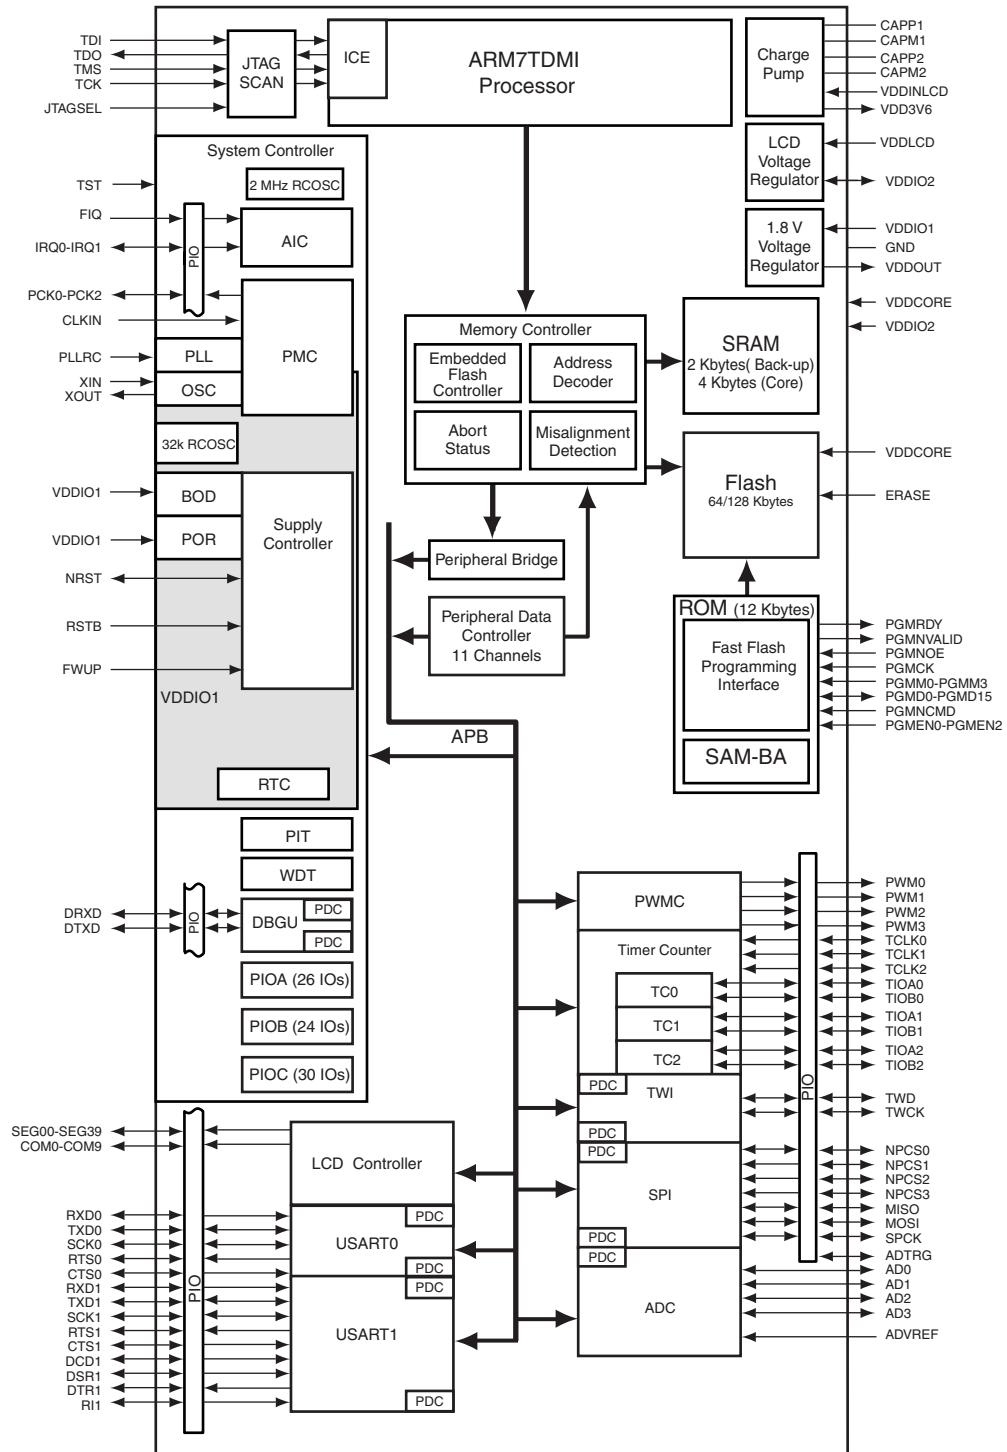

- Incorporates the ARM7TDMI® ARM® Thumb® Processor
 - High-performance 32-bit RISC Architecture
 - High-density 16-bit Instruction Set
 - Leader in MIPS/Watt
 - EmbeddedICE™ In-circuit Emulation, Debug Communication Channel Support
- Internal High-speed Flash
 - 128 Kbytes (AT91SAM7L128), Organized in 512 Pages of 256 Bytes Single Plane
 - 64 Kbytes (AT91SAM7L64), Organized In 256 Pages of 256 Bytes Single Plane
 - Single Cycle Access at Up to 15 MHz in Worst Case Conditions
 - 128-bit Read Access
 - Page Programming Time: 4.6 ms, Including Page Auto Erase, Full Erase Time: 10 ms
 - 10,000 Write Cycles, 10-year Data Retention Capability, Sector Lock Capabilities, Flash Security Bit
 - Fast Flash Programming Interface for High Volume Production
- Enhanced Embedded Flash Controller (EEFC)
 - Interface of the Flash Block with the 32-bit Internal Bus
 - Increases Performance in ARM and Thumb Mode with 128-bit Wide Memory Interface
- Internal High-speed SRAM, Single-cycle Access at Maximum Speed
 - 6 kbytes
 - 2 Kbytes Directly on Main Supply that Can Be Used as Backup SRAM
 - 4 Kbytes in the Core
- Memory Controller (MC)
 - Enhanced Embedded Flash Controller, Abort Status and Misalignment Detection
- Reset Controller (RSTC)
 - Based on Brownout Reset and Low-power Factory-calibrated Brownout Detector
 - Provides External Reset Signal Shaping and Reset Source Status
- Clock Generator (CKGR)
 - Low-power 32 kHz RC Oscillator, 32 kHz On-chip Oscillator, 2 MHz Fast RC Oscillator and one PLL
- Supply Controller (SUPC)
 - Minimizes Device Power Consumption
 - Manages the Different Supplies On Chip
 - Supports Multiple Wake-up Sources
- Power Management Controller (PMC)
 - Software Power Optimization Capabilities, Including Slow Clock Mode (Down to 500 Hz) and Idle Mode
 - Three Programmable External Clock Signals
 - Handles Fast Start Up
- Advanced Interrupt Controller (AIC)
 - Individually Maskable, Eight-level Priority, Vectored Interrupt Sources
 - Two External Interrupt Sources and One Fast Interrupt Source, Spurious Interrupt Protected

Board Description

- **Debug Unit (DBGU)**
 - Two-wire UART and Support for Debug Communication Channel interrupt, Programmable ICE Access Prevention
- **Periodic Interval Timer (PIT)**
 - 20-bit Programmable Counter plus 12-bit Interval Counter
- **Windowed Watchdog (WDT)**
 - 12-bit Key-protected Programmable Counter
 - Provides Reset or Interrupt Signals to the System
 - Counter may be Stopped While the Processor is in Debug State or in Idle Mode
- **Real-time Clock (RTC)**
 - Two Hundred Year Calendar with Alarm
 - Runs Off the Internal RC or Crystal Oscillator
- **Three Parallel Input/Output Controllers (PIOA, PIOB, PIOC)**
 - Eighty Programmable I/O Lines Multiplexed with up to Two Peripheral I/Os
 - Input Change Interrupt Capability on Each I/O Line
 - Individually Programmable Open-drain, Pull-up resistor and Synchronous Output
- **Eleven Peripheral DMA Controller (PDC) Channels**
- **One Segmented LCD Controller**
 - Display Capacity of Forty Segments and Ten Common Terminals
 - Software Selectable LCD Output Voltage (Contrast)
- **Two Universal Synchronous/Asynchronous Receiver Transmitters (USART)**
 - Individual Baud Rate Generator, IrDA[®] Infrared Modulation/Demodulation
 - Support for ISO7816 T0/T1 Smart Card, Hardware Handshaking, RS485 Support
 - Manchester Encoder/Decoder
 - Full Modem Line Support on USART1
- **One Master/Slave Serial Peripheral Interface (SPI)**
 - 8- to 16-bit Programmable Data Length, Four External Peripheral Chip Selects
- **One Three-channel 16-bit Timer/Counter (TC)**
 - Three External Clock Inputs, Two Multi-purpose I/O Pins per Channel
 - Double PWM Generation, Capture/Waveform Mode, Up/Down Capability
- **One Four-channel 16-bit PWM Controller (PWMC)**
- **One Two-wire Interface (TWI)**
 - Master, Multi-Master and Slave Mode Support, All Atmel[®] Two-wire EEPROMs and I²C compatible Devices Supported
 - General Call Supported in Slave Mode
- **One 4-channel 10-bit Analog-to-Digital Converter, Four Channels Multiplexed with Digital I/Os**
- **SAM-BA[®] Boot Assistant**
 - Default Boot Program
 - Interface with SAM-BA Graphic User Interface
 - In Application Programming Function (IAP)
- **IEEE[®] 1149.1 JTAG Boundary Scan on All Digital Pins**
- **I/Os, including Four High-current Drive I/O lines, Up to 4 mA Each**
- **Power Supplies**
 - Embedded 1.8V Regulator, Drawing up to 60 mA for the Core with Programmable Output Voltage
 - Single Supply 1.8V - 3.6V
 - Zero-power Power-on Reset and Brownout Detector, Fully Programmable
- **Fully Static Operation: Up to 36 MHz at 85°C**
- **Available in a 128-lead LQFP Green and a 144-ball LFBGA Green Package**

3.2 AT91SAM7L64/128 Block Diagram

Figure 3-1. AT91SAM7L64/128 Block Diagram

3.3 Memory

- 6 Kbytes of Internal single-cycle access High-speed SRAM
- 64/128 Kbytes of Internal single-cycle access High-speed Flash

3.4 Clock Circuitry

- 32.768 KHz standard crystal for the oscillator

3.5 Reset Circuitry

- Internal reset controller with a bi-directional reset pin
- External reset push button

3.6 Shut Down controller

- Programmable shutdown and Wake-Up
- Wake-up push button.

3.7 Power Supply Circuitry

- For dynamic power consumption, the AT91SAM7L64/128 consumes a maximum of 30 mA on VCC at full speed 36MHz
- On board 2 AAA batteries or 3V DC input power pad directly supplied to VCC

3.8 User Interface

- Five user- input push buttons, four direction buttons and one ok button

3.9 Debug Interface

- 20-pin JTAG/ICE interface connector
- One Serial interface (DBGU COM Port) via RS-232 DB9 male socket

3.10 Expansion Slot

- One ZIGBEE expansion connector for Atmel AT86RF230 adaptor
- All PIO signals of the AT91SAM7L64/128 are routed to peripheral extension connector (J6). This allows the developer to add external hardware components or boards.

3.11 PIO Usage

4.1 Configuration Straps

Table 4-1 gives details of configuration straps on the AT91SAM7L-STK rev. A starter board and their default settings.

Table 4-1.

Designation	Default Setting	Feature
J6 pins 39-40	Opened	Closed for internal flash erase ⁽¹⁾
J8	Closed	VCC jumper ⁽²⁾
SD1	Opened	Disables VDDIO2 to VDDLCD connection
SD2	2-3	Selects VCC or VDD3V6 to VDDLCD
SD3	Closed	Enables VDDOUT applying to VDDCORE
SD4	2-3	Selects VDDINLCD input
R20	IN	Enables the ICE NRST input
TP1	N.A	RX
TP2	N.A	TX
TP3	N.A	CLKIN
TP4	N.A	FWUP
TP5	N.A	ADREF
TP6	N.A	XOUT
TP7	N.A	NRSTB
TP8	N.A	VDDIO2
TP9	N.A	VDD3V6
TP10	N.A	VDDOUT

- Notes:
1. This jumper is used to erase and reinitialize the internal flash content and some of the NVM bits.
 2. This jumper is provided for power consumption measurement. By default, it is closed. To use this feature, the user has to open the strap and insert an ammeter.

6.1 Q1 Footprint Incorrect

Transistor Q1 is incorrectly connected. The schematic is right but the PCB connections of pins S and D are swapped => the protection diode is polarized forward (permanent current flow across the bridge) and the MOS is not operating properly (non accurate battery level measurement).

Problem Fix/Workaround

Remove Q1 in order to avoid the parasitic 150 μ A battery drain. If battery measurement is really mandatory for some applications, Q1 has to be removed and soldered bottom up, taking care to apply the correct polarity. Additionally, a 100 K Ω pull-up resistor is needed across gate and source.

6.2 MAX3318 Control Pull-ups

The default configuration of the MAX3318 is ON. This leads to extra power consumption discharging the batteries when the AT91SAM7L128 enters OFF mode (or does not even drive PC7 and PC12 to put the MAX3318 in OFF mode).

Problem Fix/Workaround

Remove R1, R2 and R3 and add a 10M Ω pull-down resistor on PC7. This allows to Force OFF the MAX3318 when the AT91SAM7L128 enters OFF mode and to turn it on when the AT91SAM7L128 wakes up. The user can save power consumption by driving PC7 connected to the FORCEOFF pin of the MAX3318.
