

**5V TTL-TO-DIFFERENTIAL PECL
AND DIFFERENTIAL PECL-TO-TTL
TRANSLATOR**

**SY10ELT28
SY100ELT28
FINAL**

■ **Guaranteed AC parameters over temperature:**

- $f_{MAX} > 160\text{MHz}$ (TTL)
- $< 5.5\text{ns}$ PECL-to-TTL propagation delay
- $< 1.5\text{ns}$ t_r / t_f ; PECL output
- $< 1.3\text{ns}$ TTL-to-PECL propagation delay

■ **Wide temperature range: -40°C to $+85^{\circ}\text{C}$**

■ **5V power supply**

■ **Q_{TTL} output will default low with inputs left open or $< 1.3\text{V}$**

■ **Q_{ECL} output will default high with inputs left open**

■ **Internal PECL input pulldown resistors**

■ **Available in 8-pin MSOP and SOIC packages**

The SY10/100ELT28 is a differential PECL-to-TTL translator and a TTL-to-differential PECL translator in a single package. Because PECL (Positive ECL) levels are used, only +5V and ground are required. The small outline 8-pin package and the dual translation design of the ELT28 makes it ideal for applications which are sending and receiving signals across a backplane.

NOTE:

1. Permanent device damage may occur if ABSOLUTE MAXIMUM RATINGS are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to ABSOLUTE MAXIMUM RATING conditions for extended periods may affect device reliability.
