Small interlock switch with five poles and solenoid.

Ideal for applications in tight spaces.

- Compact body: 75 × 15 × 75 mm
- 15-mm-wide, thinnest solenoid interlock switch in the world.
- Reversible mounting and angled cable allow four actuator insertion directions.
- Energy saving. 24V DC, 110 mA (solenoid: 100 mA, LED: 10 mA). Can be driven directly by a controller.
- Manual unlocking possible on three sides.
- LED indicator shows solenoid operation

Spring Lock

- Automatically locks the actuator without power applied to the solenoid.
- After the machine stops, unlocking is completed by the solenoid.
- Manual unlocking is possible on three sides in the event of power failure or maintenance.

Solenoid Lock

- The actuator is locked when energized.
- The actuator is unlocked when de-energized.
- Flexible locking function can be achieved, for an application where locking is not required and sudden stopping of a machine must be prevented.

Ratings

Actuator

| Shape | Part No. | Remarks | | |
|-----------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Straight Actuator | HS9Z-A61 | The retention force of HS9Z-A61 actuator is 500N maximum. Do no apply excessive load, otherwise the actuator may fall off the door. | | |
| Right-angle Actuator | HS9Z-A62 | The retention force of HS9Z-A62 actuator is 100N maximum. Do no apply excessive load, otherwise the actuator may fall off the door. When retention force of 100N or more is required, use the HS9Z- A62S actuator. | | |
| Right-angle Actuator with Mounting Plate | HS9Z-A62S | The retention force of HS9Z-A62S actuator is 500N maximum. Do no apply excessive load, otherwise the actuator may fall off the door. | | |
| Horizontal/Vertical Angle Adjustable Actuator | HS9Z-A65 | The HS9Z-A65 and HS9Z-A66 have the metal key installed in opposite directions. Select actuator by determining the required moving direction in consideration of the door and interlock switch. | | |
| Horizontal/Vertical Angle Adjustable Actuator | HS9Z-A66 | See pages 17, 22, and 23. The retention force of HS9Z-A65 and HS9Z-A66 actuators is 500 maximum. | | |

Part No. Development

4: 24V DC/Spring Lock 7Y: 24V DC/Solenoid Lock

Dimensions

Interlock Switch

When using straight actuator (HS9Z-A61) (12.6^{±1})* (5)

When using right-angle actuator (HS9Z-A62Š)

When using horizontal/vertical angle adjustable actuator (HS9Z-A65/A66)

Note 1: Remove the actuator stop after mounting the actuator. Note 2: 41.4 when using HS9Z-A62.

* The retention force of the HS9Z-A62 actuator is 100N. When tensile force exceeding 100N is expected, use the HS9Z-A62S actuator (with a mounting plate).

Actuator Mounting Reference Position

As shown in the figure on the right, the mounting reference position of the actuator when inserted in the interlock switch is: The actuator stop on the actuator lightly touches the interlock switch.

Note: After mounting the actuator, remove the actuator stop from the actuator.

Dimensions

Straight Actuator (HS9Z-A61)

Main circuit: Connected to the machine drive control circuit, sending the interlock signals of the protective door.

Monitor circuit: Sends the monitoring signals of open/closed and lock/unlocked statuses of the protective door.

Operation Characteristics (reference)

• The characteristics shown in the chart above are of the HS9Z-A61, -A62, -A65, and -A66 actuators. For the HS9Z-A62S actuator, subtract 0.6 mm.

Connected to the machine drive control circuit, sending the interlock signals of the protective door. Main circuit:

Monitor circuit: Sends the monitoring signals of open/closed and lock/unlocked statuses of the protective door. Note 1: Do not attempt manual unlocking while the solenoid is energized. Note 2: Do not energize the solenoid for a long period of time while the door is open or while the door is unlocked manually using the manual unlock key.

Operation Characteristics (reference)

• The characteristics shown in the chart above are of the HS9Z-A61, -A62, -A65, and -A66 actuators.

For the HS9Z-A62S actuator, subtract 0.6 mm.

Monitor circuit: Sends the monitoring signals of open/closed and lock/unlocked statuses of the protective door. Note 1: Do not attempt manual unlocking while the solenoid is energized. Note 2: Do not energize the solenoid for a long period of time while the door is open or while the door is unlocked manually using the manual unlock key.

Operation Characteristics (reference)

| Lock Monitor Circuit (locked, NC) | | | | | |

• The characteristics shown in the chart above are of the HS9Z-A61, -A62, -A65, and -A66 actuators.

For the HS9Z-A62S actuator, subtract 0.6 mm.

Safety Precautions

- In order to avoid electric shock or fire, turn power off before installation, removal, wiring, maintenance, or inspection of the interlock switch.
- If relays are used in the circuit between the interlock switch and the load, use only safety relays, since welded or sticking contacts of standard relays may invalidate the functions of the interlock switch. Perform a risk assessment and make a safety circuit which satisfies the requirements of the safety category.
- Do not place a PLC in the circuit between the interlock switch and the load. Safety security can be endangered in the event of a malfunction of the PLC.

Instructions

- Regardless of door types, do not use the interlock switch as a door stop. Install a mechanical door stop at the end of the door to protect the interlock switch against excessive force.
- Do not apply excessive shock to the interlock switch when opening or closing the door. A shock to the interlock switch exceeding 1,000 m/s² may cause damage to the interlock switch.
- When unlocking, the switch may not be unlocked if a load is applied to the actuator.
- If the operating atmosphere is contaminated, use a protective cover to prevent the entry of foreign objects into the interlock switch through the actuator entry slots.
- Entry of a considerable amount of foreign objects into the interlock switch may affect the mechanism of the interlock switch and cause a malfunction.
- Do not store the interlock switches in a dusty, humid, or organic-gas atmosphere, or in an area subjected to direct sunlight.
- Use dedicated actuators only. When other actuators are used, the interlock switch may be damaged.
- For correct operation, install the interlock switch on a flat surface and provide sufficient strength to the surface so that it is not disfigured. Do not insert any object between the interlock switch and installation surface.
- Do not cut the actuator. modification of the actuator may cause damage.
- The locking strength is rated at 500N. Do not apply a load higher than the rated value. When a higher load is expected, provide an additional system consisting of another interlock switch without lock (such as the HS6B/HS7A interlock switch) or a sensor to detect door opening and stop the machine.
- Regardless of door types, do not use the interlock switch as a door lock. Install a separate lock using a latch or other measures.
- While the solenoid is energized, the switch temperature rises approximately 35°C above the ambient temperature (to approximately 85°C while the ambient temperature is 50°C). Do not touch to prevent burns. If cables come into contact with the switch, use heat-resistant cables.
- Solenoid has polarity. Be sure of correct polarity when wiring, otherwise solenoid will be damaged. Do not apply voltage over the rated voltage, otherwise the solenoid will be burnt.
- Bouncing will occur on the lock monitor contact during locking and unlocking (reference value: 20 ms).

- Do not disassemble or modify the interlock switch, otherwise a malfunction or an accident may occur.
- Do not install the actuator in a location where a human body may come into contact. Otherwise injury may occur.
- Solenoid lock is locked when energized, and unlocked when de-energized. When energization is interrupted due to wire disconnection or other failures, the interlock switch may be unlocked causing possible danger to the operators. Solenoid lock must not be used in applications where locking is strictly required for safety. Perform a risk assessment and determine whether solenoid lock is appropriate.
- Although the HS9Z-A61/A62/A62S actuators alleviate shock when the actuator enters a slot in the interlock switch, make sure that excessive shock is not applied. If the rubber bushings become deformed or cracked, replace with new ones.

Minimum Radius of Hinged Door

- When using the interlock switch on hinged doors, refer to the minimum radius of doors shown below. When using on doors with small minimum radius, use the angle adjustable actuator (HS9Z-A65 and HS9Z-A66).
- Note: Because deviation or dislocation of hinged doors may occur in actual applications, make sure of the correct operation before installation.

When Using the HS9Z-A62/A62S Right-angle Actuator

• When the door hinge is on the extension line of the interlock switch surface:

• When the door hinge is on the extension line of the actuator mounting surface:

For Manual Unlocking

When using the HS9Z-A65/HS9Z-A66 Angle Adjustable Actuator

· When the door hinge is on the extension line of the interlock switch surface

· When the door hinge is on the extension line of the actuator mounting surface

Actuator Angle Adjustment for the HS9Z-A65/HS9Z-A66

- Using the angle adjustment screw, the actuator angle can be adjusted (see figures on page 17). Adjustable angle: 0 to 20°
- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.
- After installing the actuator, open the door. Then adjust the actuator so that its edge can enter properly into the actuator entry slot of the interlock switch.
- · After adjusting the actuator angle, apply Loctite to the adjustment screw so that the screw will not become loose.

Mounting Examples

Mount the interlock switch on a fixated machine or guard, and mount the actuator on the hinged door. Do not mount both interlock switch and actuator on hinged doors, otherwise malfunction will occur.

that the actuator enters the slot in the correct direction, as shown on the right.

The HS6E allows manual unlocking of the actuator to pre-check proper door operation before wiring or turning power on, as well as for emergency use such as a power failure.

Solenoid lock

Spring lock

The HS6E can be unlocked manually in emergency.

When using the manual unlock key

- When locking or unlocking the interlock switch manually, turn the key fully using the manual unlock key supplied with the switch.
- Using the interlock switch with the key not fully turned (less than 90°) may cause damage to the interlock switch or operation failures (when manually unlocked, the switch will keep the main circuit disconnected and the door unlocked).
- Do not apply excessive force (0.45 N·m or more) to the manual unlock part, otherwise the manual unlock part will become damaged.
- Do not leave the manual unlock key attached to the switch during operation. This is dangerous because the switch can always be unlocked while the machine is in operation.

(supplied with the interlock switch)

When unlocking pushing the plate inside the interlock switch

- Remove the screw at the side of the interlock switch (the same side where actuator is inserted) and insert a small screwdriver.
- Push the plate inside the interlock switch toward the LED indicator using the screwdriver until the actuator is unlocked.
- Tighten the screw to a proper torque (0.3 to 0.5 N·m). Do not tighten with excessive force, otherwise the interlock switch will be damaged. Be sure to reinstall the screw, otherwise the waterproof capability will be lost.

Caution

Before manually unlocking the interlock switch, make sure that the machine has come to a complete stop. Manual unlocking during operation may unlock the interlock switch before the machine stops, and the function of the interlock switch with solenoid is lost. While the solenoid is energized, do not unlock the switch manually (solenoid lock).

Recommended Tightening Torque of Mounting Screws

- \bullet Interlock switch: 1.0 to 1.5 N·m (three M4 screws)
- Actuators: 1.0 to 1.5 N·m (two M4 screws)
- The above recommended tightening torques of the mounting screws are the values with hex socket head bolts. When other screws are used and tightened to a smaller torque, make sure that the screws do not become loose after mounting.
- Mounting bolts are not supplied with the interlock and must be supplied by the user.
- To avoid unauthorized or unintended removal of the interlock switch and the actuator, it is recommended that the interlock switch and the actuator are installed in an unremovable manner, for example using special screws, rivets, or welding the screws.
- When installing the HS9Z-A62S actuator, use the mounting plate (supplied with the actuator) on the hinged door, and secure the actuator tightly using two M4 screws.
- The mounting plate has orientation.
- Do not lose the mounting plate.

Cables

- Do not fasten or loosen the gland at the bottom of the interlock switch.
- When bending the cable during wiring, make sure that the cable radius is kept at 30 mm minimum.
- When wiring, make sure that water or oil does not enter from the end of the cable.
- Do not open the lid of the interlock switch. Otherwise the interlock switch will be damaged.
- The solenoid has polarity. Make sure of the correct polarity when wiring.

Gland

Wire Identification

• Wires can be identified by the color and or a white line printed on the wire.

| No. | Insulation Color | No. | Insulation Color |
|-----|------------------|-----|------------------|
| 1 | Blue/White | 7 | White |
| 2 | Gray | 8 | Black |
| 3 | Pink | 9 | Pink/White |
| 4 | Orange | 10 | Brown/White |
| 5 | Orange/White | 11 | Brown |
| 6 | Gray/White | 12 | Blue |

Note: Wires of gray or gray/white are not used and should not be connected. Colored Insulation

Terminal Number Identification

- When wiring, identify the terminal number of each contact by the color of insulation.
- The following table shows the identification of terminal numbers.
- When wiring, cut unused wires at the end of the jacket to avoid incorrect wiring.

| Mo el | ontact Arrange ent | | | | | |
|---------|--------------------------------------------------------|--|--|--|--|--|
| | Door Monitor Lock Monitor | | | | | |
| HS6E-L | $\begin{array}{c ccccccccccccccccccccccccccccccccccc$ | | | | | |
