Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

- t_{ON} and t_{OFF} include the propagation delay time of the internal drive IC. $t_{C(ON)}$ and $t_{C(OFF)}$ are the switching times of IGBT itself under the given gate driving condition internally. Refer to Figure 6 for detailed information.
- Stray inductance L_s is sum of stray inductance of module & setup.
- Verified by design and bench-testing only.
- Short-circuit current protection is functional only for low side.
- T_{LVIC} is the junction temperature of the LVIC itself.
