QSFP-100G-ER4-MSA-AT

Universally Coded MSA Compliant 100GBase-ER4 QSFP28 Transceiver

Hot Pluggable, +3.3V, MPO, 1310nm, up to 40km, Commercial Temperature

FEATURES

- Four-channel full-duplex transceiver modules
- Transmission data rate up to 26Gbit/s per channel
- Up to 40km
- Low power consumption <3.5W
- Commercial Operating Temperature Range: 0 to 70°C
- 3.3V power supply voltage
- RoHS 6 compliant
- Hot Pluggable QSFP form factor
- MPO connector receptacle
- Built-in digital diagnostic function

APPLICATIONS

- IEEE 802.3bm 100GBASE-ER4 and 40GBASE-ER4
- Proprietary High-Speed Interconnections
- Data center

DESCRIPTION

ATGBICS® Universally Coded MSA Compliant QSFP-100G-ER4-MSA-AT Transceiver is a Four-Channel, Pluggable, Parallel, Fibre-Optic QSFP28 Transceiver for IEEE 802.3bm, 100GBASE-ER4 Applications, or 40 Gigabit Ethernet and InfiniBand FDR/EDR Applications. The QSFP28 full-duplex optical module offers 4 independent transmit and receive channels, each capable of 26Gbps operation for an aggregate data rate of 104Gbps 70m using OM3 Fibre. These modules are designed to operate over multimode Fibre systems using 1310nm VCSEL laser array. An optical Fibre ribbon cable with an MPO/MTPTM connector can be plugged into the QSFP module receptacle. QSFP28 ER4 is one kind of parallel transceiver which provides increased port density and total system cost savings.

Notes:

1. Module circuit ground is isolated from module chassis ground within the module. GND is the symbol for signal and supply (power) common for QSFP modules.
2. The connector pins are each rated for a maximum current of 500mA.

MODSELL PIN

The ModSelL is an input pin. When held low by the host, the module responds to 2-wire serial communication commands. The ModSelL allows the use of multiple QSFP modules on a single 2-wire interface bus. When the ModSelL is “High”, the module will not respond to any 2-wire interface communication from the host. ModSelL has an internal pull-up in the module.

RESETL PIN

Reset. LPMode_Reset has an internal pull-up in the module. A low level on the ResetL pin for longer than the minimum pulse length ($t_{\text{Reset_init}}$) initiates a complete module reset, returning all user module settings to their default state. Module Reset Assert Time (t_{init}) starts on the rising edge after the low level on the ResetL pin is released. During the execution of a reset (t_{init}) the host shall disregard all status bits until the module indicates a completion of the reset interrupt. The module indicates this by posting an IntL signal with the Data_Not_Ready bit negated. Note that on power up (including hot insertion) the module will post this completion of reset interrupt without requiring a reset.

LP MODE PIN

ATGBICS QSFP28 ER4 operate in the low power mode (less than 1.5 W power consumption) This pin active high will decrease power consumption to less than 1W.

MODPRSL PIN

ModPrsL is pulled up to Vcc on the host board and grounded in the module. The ModPrsL is asserted “Low” when the module is inserted and deasserted “High” when the module is physically absent from the host connector.

INTL PIN

IntL is an output pin. When “Low”, it indicates a possible module operational fault or a status critical to the host system. The host identifies the source of the interrupt by using the 2-wire serial interface. The IntL pin is an open collector output and must be pulled up to Vcc on the host board.

POWER SUPPLY FILTERING

The host board should use the power supply filtering shown in Figure 1.

OPTICAL INTERFACE LANES AND ASSIGNMENT

The optical interface port is a male MPO connector. The four Fibre positions on the left as shown in Figure 2, with the key up, are used for the optical transmit signals (Channel 1 through 4). The Fibre positions on the right are used for the optical receive signals (Channel 4 through 1). The central four Fibres are physically present.

Transmit Channels: 1 2 3 4
Unused positions: x x x x
Receive Channels: 4 3 2 1

DIAGNOSTIC MONITORING INTERFACE

Digital diagnostics monitoring function is available on all ATGBICS QSFP28 ER4. A 2-wire serial interface provides user to contact with module. The structure of the memory is shown in Figure 3. The memory space is arranged into a lower, single page, address space of 128 bytes and multiple upper address space pages. This structure permits timely access to addresses in the lower page, such as Interrupt Flags and Monitors. Less time critical time entries, such as serial ID information and threshold settings, are available with the Page Select function. The interface address used is A0xh and is mainly used for time critical data like interrupt handling in order to enable a one-time-read for all data related to an interrupt situation. After an interrupt, IntL, has been asserted, the host can read out the flag field to determine the affected channel and type of flag.

Parameter	Symbol	Min.	Max	Unit	Notes
Temperature monitor absolute error	DMI_Temp	-3	+3	degC	Over operating temp
Supply voltage monitor absolute error	DMI_VCC	-0.1	0.1	V	Full operating range
Channel RX power monitor absolute error	DMI_RX	-3	3	dB	Per channel
Channel Bias current monitor	DMI_Ibias	-10%	10%	mA	Per channel

MECHANICAL DIMENSIONS (units: mm)

ESD

This transceiver is specified as ESD threshold 1KV for high-speed data pins and 2KV for all others electrical input pins, tested per MIL-STD-883, Method 3015.4 /JESD22-A114-A (HBM). However, normal ESD precautions are still required during the handling of this module. This transceiver is shipped in ESD protective packaging. It should be removed from the packaging and handled only in an ESD protected environment.

Laser Safety

This is a Class 1 Laser Product according to IEC 60825-1:2007. This product complies with 21 CFR 1040.10 and 1040.11 except for deviations pursuant to Laser Notice No. 50, dated (June 24, 2007)
