

# **CRD1611-8W**

## **8 Watt Reference Design**

### **Features**

- Quasi-resonant Flyback with Constant-current Output
- Flicker-free Dimming
- Line Voltage 230VAC, ±10%
- Rated Input Power: 8.0W
- Rated Output Power: 6.6W
- Output Voltage: 11.0V to 12.6V
- Efficiency: 83% at 550mA, for 4×LEDs in series
- Low Component Count
- Supports Cirrus Logic Product CS1611

### **General Description**

The CRD1611-8W reference design demonstrates the performance of the CS1611 resonant mode AC/DC dimmable LED driver IC with a 550mA output driving 4×LEDs in series. It offers best-in-class dimmer compatibility with leading-edge, trailing-edge, and digital dimmers. The form factor is targeted to fit into many LED bulb applications (A19, PAR).

### **DIMENSIONS (OVERALL)**

Length	Width	Height
2.284"(58mm)	1.181"(29.9mm)	0.652"(16.5mm)

For more information, see Figure 3.

## IMPORTANT SAFETY INSTRUCTIONS

**Read and follow all safety instructions prior to using this demonstration board.**

This Engineering Evaluation Unit or Demonstration Board must only be used for assessing IC performance in a laboratory setting. This product is not intended for any other use or incorporation into products for sale.

This product must only be used by qualified technicians or professionals who are trained in the safety procedures associated with the use of demonstration boards.

### **⚠ DANGER Risk of Electric Shock**

- The direct connection to the AC power line and the open and unprotected boards present a serious risk of electric shock and can cause serious injury or death. Extreme caution needs to be exercised while handling this board.
- Avoid contact with the exposed conductor or terminals of components on the board. High voltage is present on exposed conductor and it may be present on terminals of any components directly or indirectly connected to the AC line.
- Dangerous voltages and/or currents may be internally generated and accessible at various points across the board.
- Charged capacitors store high voltage, even after the circuit has been disconnected from the AC line.
- Make sure that the power source is off before wiring any connection. Make sure that all connectors are well connected before the power source is on.
- Follow all laboratory safety procedures established by your employer and relevant safety regulations and guidelines, such as the ones listed under, OSHA General Industry Regulations - Subpart S and NFPA 70E.

**⚠ WARNING** Suitable eye protection must be worn when working with or around demonstration boards. Always comply with your employer's policies regarding the use of personal protective equipment.

**⚠ WARNING** All components and metallic parts may be extremely hot to touch when electrically active.

## 1. INTRODUCTION

The CS1611 is a 230VAC quasi-resonant flyback mode dimmable LED controller IC. The CS1611 uses a digital control algorithm that is optimized for high efficiency and >0.9 power factor over an input voltage range (207VAC to 253VAC). The CS1611 integrates a critical conduction mode (CRM) boost converter that provides power factor correction and dimmer compatibility with a constant output current, quasi-resonant flyback stage. An adaptive dimmer compatibility algorithm controls the boost stage and dimmer compatibility operation mode to enable flicker-free operation to <2% output current with leading-edge, trailing-edge, and digital dimmers.

The CRD1611-8W board is optimized to deliver low system cost in a high-efficiency, flicker-free, phase-dimmable, solid-state lighting (SSL) solution for incandescent lamp replacement applications. The feedback loop is closed through an integrated digital control system within the IC. The variation in switching frequency also provides a spread-frequency spectrum, thus minimizing the conducted EMI filtering requirements. Protection algorithms such as output open/short, current-sense resistor open/short, and overtemperature thermistors protect the system during abnormal conditions. Details of these features are provided in the CS1611 data sheet.

The CRD1611-8W board demonstrates the performance of the CS1611. This reference board has been designed for an output load of 4×LEDs in series at 550mA (12.0V typical).

This document provides the schematic for the board. It includes oscilloscope screen shots that indicate various operating waveforms. Graphs are also provided that document the performance of the board in terms of Efficiency vs. Line Voltage, Output Current vs. Line Voltage, and Output Current vs. Dim Angle for the CS1611 dimmable LED controller IC. Extreme caution needs to be exercised while handling this board. This board is to be used by trained professionals only.

## 7. INDUCTOR CONSTRUCTION

The CRD1611-8W includes a critical conduction mode (CRM) boost converter that provides power factor correction and dimmer compatibility with a constant output current, quasi-resonant flyback stage. The following sections describe the boost and flyback inductors installed on the CRD1611-8W.

### 7.1 Boost Inductor

The CS1611 uses an adaptive dimmer compatibility algorithm to control the boost inductor stage, which guarantees dimmer compatibility operation plus enables flicker-free operation with leading-edge, trailing-edge, and digital dimmers (dimmers with an integrated power supply). The boost auxiliary winding is used for zero-current detection (ZCD) and supplies power to the CS1611.

**Figure 10. Boost Inductor Schematic**

#### 7.1.1 Electrical Specifications

Characteristics conditions:

- Operating temperature range: -25 °C to +120 °C (including coil heat)

Parameter	Condition	Symbol	Min	Typ	Max	Unit
<b>Boost Inductor</b>						
Primary Inductance (Note 7)	$f_{\text{resonant}} = 10 \text{ kHz}$ , 0.3V at 20°C	$L_P$	6.12	6.8	7.48	mH
Primary DC Resistance (Note 7)	$t_{\text{DCR}} = 20^\circ\text{C}$		12	15	18	$\Omega$
Auxiliary DC Resistance (Note 8)	$t_{\text{DCR}} = 20^\circ\text{C}$		0.84	1.05	1.26	$\Omega$

Notes:

- 7. Measured across pins 1 and 2.
- 8. Measured across pins 5 and 4.

## 7.2 Flyback Transformer

The flyback transformer stage is a quasi-resonant peak current-regulated DC-DC converter capable of delivering the highest possible efficiency with constant current output while minimizing line frequency ripple. The auxiliary winding is used for zero-current detection and overvoltage protection.

**Figure 11. Flyback Transformer Schematic**

### 7.2.1 Electrical Specifications

Characteristics conditions:

- Operating temperature range: -25 °C to +120 °C (including coil heat)

Parameter	Condition	Symbol	Min	Typ	Max	Unit
<b>Flyback Transformer</b>						
Electrical Strength (Note 9)	$f_{operate}=50/60\text{Hz}$		-	4K	-	V <sub>RMS</sub>
Primary Inductance (Note 10)	$f_{resonant}=10\text{kHz}$ , 0.3V at 20°C	L <sub>P</sub>	13.05	14.5	15.95	mH
Primary Leakage Inductance (Note 10)	$f_{resonant}=10\text{kHz}$ , 0.3V at 20°C	L <sub>K</sub>	-	106	-	μH
Primary DC Resistance (Note 10)	$t_{DCR}=20^\circ\text{C}$		5.25	7.0	8.75	Ω
Secondary DC Resistance (Note 11)	$t_{DCR}=20^\circ\text{C}$		-	120	-	mΩ
Auxiliary DC Resistance (Note 12)	$t_{DCR}=20^\circ\text{C}$		-	400	-	mΩ

Notes: 9. Time = 2sec.

- 10. Measured across pins 3 and 4.
- 11. Measured across pins B and A.
- 12. Measured across pins 2 and 1.
