

**COMPLEMENTARY SILICON  
HIGH-POWER TRANSISTORS**

General-Purpose Power Amplifier and Switching Applications

**FEATURES:**

- \* Low Collector-Emitter Saturation Voltage -  
 $V_{CE(SAT)} = 1.0V(\text{Max.}) @ I_C = 15 A$
- \* Excellent DC Current Gain -  
 $hFE = 20 \sim 100 @ I_C = 10 A$

ACTIVE-REGION SAFE OPERATING AREA (SOA)

There are two limitation on the power handling ability of a transistor: average junction temperature and second breakdown safe operating area curves indicate  $I_c$ - $V_{CE}$  limits of the transistor that must be observed for reliable operation i.e., the transistor must not be subjected to greater dissipation than curves indicate.

The data of SOA curve is base on  $T_{J(PK)}=200^\circ\text{C}$ ;  $T_c$  is variable depending on conditions. second breakdown pulse limits are valid for duty cycles to 10% provided  $T_{J(PK)} \leq 200^\circ\text{C}$ . At high case temperatures, thermal limitation will reduce the power that can be handled to values less than the limitations imposed by second breakdown.
