

FDS7064N 30V N-Channel PowerTrench[®] MOSFET

General Description

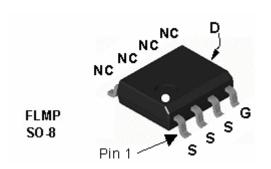

This N-Channel MOSFET has been designed specifically to improve the overall efficiency of DC/DC converters using either synchronous or conventional switching PWM controllers. It has been optimized for "low side" synchronous rectifier operation, providing an extremely low $R_{DS(ON)}$ in a small package.

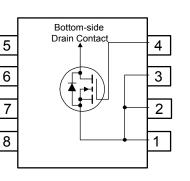

Applications

- Synchronous rectifier
- DC/DC converter

Features

- 16 A, 30 V $R_{DS(ON)} = 7.5 \text{ m}\Omega @ V_{GS} = 4.5 \text{ V}$
- High performance trench technology for extremely low $R_{\text{DS}(\text{ON})}$
- High power and current handling capability
- Fast switching
- FLMP SO-8 package: Enhanced thermal performance in industry-standard package size

Absolute Maximum Ratings T_A=25°C unless otherwise noted
