

Amplifier-separated
Digital Laser Sensor
LS-500 SERIES

LS-500 SERIES

 This product is classified as a Class 1 Laser Product in IEC / JIS standards and in FDA* regulations. Do not look at the laser beam through optical system such as a lens.

*This product complies with 21 CFR 1040.10 and 1040.11 Laser Notice No. 50, dated June 24, 2007, issued by CDRH (Center for Devices and Radiological Health) under the FDA (Food and Drug Administration).

-  Self-diagnosis
-  Test input
-  PNP output type available
-  Timer
-  Light intensity monitor
-  Interference prevention
-  Automatic sensitivity setting

Industry's smallest*

*Amplifier-separated type laser sensor head as of September 2014, in-company survey

Industry's smallest* + Stainless steel (SUS) enclosure

*Amplifier-separated type laser sensor head as of September 2014, in-company survey

LS-H101

Stainless steel (SUS) body

Featuring stainless steel (SUS) enclosure that won't break when bumped during installation or maintenance.

One-point M6 installation

The LS-H101 features an easy-to-install design.

1 m 3.281 ft sensing range

(In STD amplifier response time mode)

Industry's smallest* + IP67

*Amplifier-separated type laser sensor head as of September 2014, in-company survey

LS-H102

Waterproof IP67

Featuring waterproof IP67 to allow use in the presence of large amounts of water or dust.

Simple positioning

Check the optimal receiving location at a glance while watching the red spot on the beam axis adjustment screen.

Two-point installation

The thru-beam type LS-H102 features the same form as the EX-L200 amplifier built-in ultra-compact laser sensor. And it can be used as an EX-L200 with a digital indicator.

LS-H102

EX-L211 / EX-L212

Same installation pitch as the EX-L200 series

1 m 3.281 ft sensing range (In STD amplifier response time mode)

The LS-H102 delivers sufficient sensing range for use with 450 mm 17.717 in wafers.

APPLICATIONS**Lead frame position detection****Wafer inclination detection****IC float detection****Detection of workpieces through a workbench****Detection of gaskets in caps****Detection of the top of DVDs, substrate, etc.****Industry's smallest* + Thinnest profile****Featuring a 60% smaller design (by volume) than previous coaxial reflective models**

Our smallest unit is smaller in every dimension at just $W8 \times H23 \times D18$ mm $W0.315 \times H0.906 \times D0.709$ in (excluding indicators).

*Amplifier-separated type laser sensor head as of September 2014, in-company survey **LS-H201**

**Coaxial design**

By using a laser with high linearity in a coaxial design, the **LS-H201** is able to deliver stable sensing in confined spaces as well as simple installation.

**Small, long-range spot**

The **LS-H201** produces a spot with a diameter of 2 mm 0.079 in at a sensing range of up to 300 mm 11.811 in (in STD amplifier response time mode).

**Easy-to-see operation indicator**

The **LS-H201**'s operation indicator is visible from all directions.

Industry's smallest* + Horizontal symmetry

*Amplifier-separated type laser sensor head as of September 2014, in-company survey **LS-H901**

Horizontal symmetry

Featuring a simple system design process thanks to a light source that is placed in the center of the sensor head and a coaxial design.

Industry's smallest* and thinnest design

The **LS-H901** is even thinner than previous models, measuring just W8 × H23 (excluding indicators) × D18 mm W0.315 × H0.906 × D0.709 in.

*Amplifier-separated type laser sensor head as of September 2014, in-company survey

Sensing range of 10 mm to 1 m

0.394 in to 3.281 ft

(In STD amplifier response time mode)

The **LS-H901** supports close-range sensing

Among industry's fastest response times* 60 μs

*Amplifier-separated type laser sensor head as of September 2014, in-company survey **LS-501**

Maximum compatibility with fiber sensors

The **LS-500** series features the same operation, menu displays, and form factor as the **FX-500** series for increased compatibility with fiber sensors.

**Detection of beam axis misalignment
Dual outputs (self-diagnosis output)**

The **LS-500** series can detect any reduction in incident light intensity, for example due to the accumulation of dirt such as dust, and issue an alarm. Sensing output 2 can be set as self-diagnosis output. When you teach the threshold for sensing output 1, sensing output 2 is set accordingly, allowing you to shift the threshold by a previously set margin.

Stable sensing over the long term

The **LS-500's** threshold-tracking function helps maintain stable sensing over the long term and reduce maintenance man-hours. The incident light intensity can be checked and the threshold automatically reset at a user-selected interval to track changes in light intensity due to environmental changes (such as dust, etc.) over extended periods of time.

Logic operations

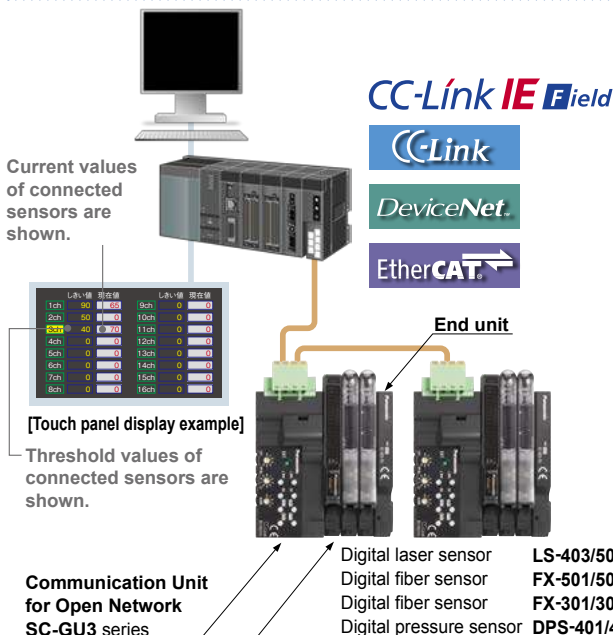

The **LS-500's** ability to perform three logic operations (AND, OR, and XOR) on a standalone basis eliminates the need for a dedicated controller, cuts down on wiring, and lowers costs. This functionality can also be combined with the **FX-500** series.

Data bank

Eight sets of amplifier settings can be stored in the unit's built-in memory. The ability to save and load settings reduces workload when changing the setup in a multi-model production environment.

Network communication possible

LS-501

Can connect to Open Network CC-Link IE Field / CC-Link / DeviceNet / EtherCAT via Communication Unit for Open Network **SC-GU3** series. Monitoring and various settings can be done from PLC, PC, etc.

*CC-Link and CC-Link IE Field are a registered trademark of Mitsubishi Electric Corporation.
DeviceNet is a registered trademark of ODVA (Open DeviceNet Vender Association, Inc.).
EtherCAT is a registered trademark of Beckhoff Automation GmbH.

- Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +23 °C **+73.4 °F**.
- 2) When using the thru-beam type **LS-H101** or **LS-H102**, do not set the receiving light sensitivity (gctL) of the applicable **LS-500** series amplifier to level 2 or less. This is because there is a possibility of sensing becoming unstable.
- 3) The sensing range of the coaxial reflective type sensor is specified for white non-glossy paper (100 × 100 mm **3.937 × 3.937 in**) as the object.
- 4) The sensing ranges for coaxial retroreflective type sensors are values for the **RF-330** reflector. In addition, the sensing range is the possible setting range for the reflector. The sensor can detect an object less than 0.01 m **0.033 ft** away. Note that if there are white papers or specular objects near the sensor head, reflected light from these objects may be received. In such cases, use the amplifier unit's receiving sensitivity function to lower the sensitivity, change the response time, or move the sensor head away from the target object. The incident light intensity may vary with the condition of the reflector surface. When using one of the applicable **LS-500** series amplifiers, leave an adequate safety margin when setting the threshold.
- 5) Make sure to confirm detection with an actual sensor before use.
- 6) This product complies with 21 CFR 1040.10 and 1040.11 Laser Notice No. 50, dated June 24, 2007, issued by CDRH (Center for Devices and Radiological Health) under the FDA (Food and Drug Administration).
- 7) Cable cannot be extended.

PRECAUTIONS FOR PROPER USE

- This catalog is a guide to select a suitable product. Be sure to read the instruction manual attached to the product prior to its use.

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet regulations and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Cautions for laser beams

- These products are Class 1 laser in compliance with IEC, JIS standards and FDA* regulations. To reduce the risk of danger, do not look directly at the laser beam or view it through an optical system.
- A label with instructions as found at the below is affixed to the product. Handle this sensor as per the instruction on the labels.

Panasonic Industrial Devices SUNX Co., Ltd.
2431-1, Ushiyama-cho, Kasugai,
Aichi 486-0901 Japan
Complies with 21 CFR 1040.10 and 1040.11
except for deviations pursuant to Laser Notice
No.50, dated June 24, 2007.
MANUFACTURED

*This product complies with 21 CFR 1040.10 and 1040.11 Laser Notice No. 50, dated June 24, 2007, issued by CDRH (Center for Devices and Radiological Health) under the FDA (Food and Drug Administration).

Safety standards for laser beam products

- A laser beam can harm human being's eyes, skin, etc., because of its high energy density. IEC has classified laser products according to the degree of hazard and the stipulated safety requirements. **LS-H□** is classified as Class 1 laser.

Classification by IEC 60825-1

Classification	Description
Class 1	Lasers that are safe under reasonably foreseeable conditions of operation, including the use of optical instruments for intrabeam viewing.

Safe use of laser products

- For the purpose of preventing users from suffering injuries by laser products, IEC 60825-1 (Safety of laser products). Please check the standards before use.

Part description (Amplifier)

Mounting

Amplifier

<How to mount the amplifier>

- (1) Fit the rear part of the mounting section of the amplifier on a 35 mm 1.378 in width DIN rail.
- (2) Press down the rear part of the mounting section of the unit on the 35 mm 1.378 in width DIN rail and fit the front part of the mounting section to the DIN rail.

<How to remove the amplifier>

- (1) Push the amplifier forward.
- (2) Lift up the front part of the amplifier to remove it.

Note: Be careful. If the front part is lifted without pushing the amplifier forward, the hook on the rear portion of the mounting section is likely to break.

<How to mount the sensor head>

- (1) Insert the sensor head connector into the inlet until it clicks.
- (2) Fit the cover to the connector.

Sensor head

LS-H101□

- The tightening torque should be 0.98 N·m or less.

LS-H102□

- In case mounting this product, use a metal plate **MS-EXL2-2** (accessory).
- The tightening torque should be 0.5 N·m or less with M3 screws.

- In case using the dedicated sensor head mounting bracket **MS-EXL2-1** (optional) when mounting this product, the metal plate **MS-EXL2-2** (accessory) is required depending on the mounting direction. Mount as the diagram below indicates.

<Not requiring the metal plate>

<Requiring the metal plate>

LS-H201□, LS-H901□

- The tightening torque should be 0.5 N·m or less.
- When placing the sensor head horizontally or vertically, the reflector must also be positioned horizontally or vertically as shown in Fig. 1 below. If the sensor head is placed horizontally or vertically but the reflector is tilted as shown in Fig. 2 below, the reflection amount will decrease, which may cause unstable detection.

PRECAUTIONS FOR PROPER USE

Fig. 1 Proper positioning

When placing the sensor head horizontally or vertically, the reflector shall also be positioned horizontally or vertically.

<Correct>

When placing the reflector tilted even when the sensor head is positioned horizontally or vertically.

Wiring

- Make sure that the power supply is off while wiring.
- Verify that the supply voltage variation is within the rating.
- Take care that if a voltage exceeding the rated range is applied, or if an AC power supply is directly connected, the sensor may get burnt or damaged.
- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- Make sure to use the optional quick-connection cable for the connection of the amplifier [connector type **LS-501(P)**]. Extension up to total 100 m **328.084 ft** is possible with 0.3 mm², or more, cable. However, in order to reduce noise, make the wiring as short as possible. Set the supply voltage after considering the voltage drop caused by the cable's resistance.
- When adding units, wiring length must not exceed 50 m **164.042 ft** (for 5 to 8 amplifiers) or 20 m **65.617 ft** (for 9 to 16 amplifiers).

Others

- Do not use during the initial transient time (0.5 sec. approx.) after the power supply is switched on.
- Because the sensitivity is higher in U-LG and HYPER modes than in other modes, it can be more easily affected by extraneous noise. Check the operating environment before use.
