Maximum Driving Torque [Nm]		
Terminals	Female	Male
		M6
	4	7
Bolt M12	12	

Qualifications

Reference Standards	IEC 61071 - EN61071 - VDE0560 – UL810 Construction only - E208772
Reference Standard for traction applications	According to UNI EN 45545-2: 2015 for Hazard Levels HL1 - HL2 for Requirements Set R22 and Hazard Levels HL1 - HL2 - HL3 for Requirements Set R23 Available with C-spec
Climatic Category	40/85/56
Damp Heat	IEC 60068-2-78
Change of Temperature	IEC 60068-2-14
Vibration Strength	IEC 60068-2-6

General Technical Data

Dielectric	Polypropylene Metallized Film, non-inductive type, self-healing property
Application	DC Filtering/DC Link
Special features	UL 810 Construction Only qualified - E208772
Climatic Category	40/85/56
Maximum T _{AMB}	85°C
Maximum T _{HS}	90°C
Standard	IEC 61071 - EN61071 - VDE0560 – UL810 Construction only
Harsh-Environmental Withstanding	1,000 hours at V _R , 85°C, 85% Relative Humidity
Protection	Aluminium case with or without, threaded bolt M12
	Plastic deck flame retardant execution UL 94 V-0
	Plastic cap flame retardant execution UL 94 V-0
	Thermosetting resin sealing
Installation	Any position
Leads	High current M6 or M8 terminals
Packaging	Packed in cardboard boxes with protection for the terminals
RoHS Compliant	Compliant with Directive 2002/95/EC and Directive 2011/65/EU of the European Parliament and of the Council on 8 June 2011, including Commission Delegated Directive (EU) 2015/863 amending Annex II to Directive 2011/65/EU.

Electrical Characteristics

Capacitance Tolerance	$\pm 10\%$ at $+25^{\circ}\text{C} \pm 5^{\circ}\text{C}$
Dielectric Dissipation Factor (DF)	≤ 0.0002 at 10 kHz with $T = 25^{\circ}\text{C} \pm 5^{\circ}\text{C}$
Surge Voltage	$1.5 \times V_{\text{NDC}}$ for maximum 10 times in lifetime at $+25^{\circ}\text{C} \pm 5^{\circ}\text{C}$
Over-Voltage (IEC 61071)	$1.15 \times V_{\text{NDC}}$ for maximum 30 minutes, once per day
	$1.3 \times V_{\text{NDC}}$ for maximum 1 minute, once per day
Peak Non-Repetitive Current	$1.5 \times I_{\text{pkf}}$ maximum 1,000 times in lifetime
Insulation Resistance	$IR \times C \geq 30,000$ seconds at 100 VDC 1 minute at $+25^{\circ}\text{C} \pm 5^{\circ}\text{C}$
Capacitance Deviation in Operation	$\pm 1.5\%$ maximum on capacitance value measured at $+25^{\circ}\text{C}$
Storage Ambient Temperature Limits	-40 to $+85^{\circ}\text{C}$

Test Method

Test Voltage Between Terminals	$1.5 \times U_{\text{NDC}}$ for 10 seconds or $1.65 \times V_{\text{NDC}}$ for 2 seconds at 25°C
Test Voltage Between Terminals and Case	4.0 kVAC 50 Hz for 2 seconds

(1): $\geq 100,000$ hours at V_{NDC} at Hot-Spot temperature $T_{\text{HS}} = 70^{\circ}\text{C}$

Lifetime Expectancy/Failure Quota Graphs

900 VDC, diameter 85 and 116 mm

900 VDC, diameter 136 mm

1,100 VDC, diameter 85 and 116 mm

1,100 VDC, diameter 136 mm

Environmental Compliance

As a leading global supplier of electronic components and an environmentally conscious company, KEMET continually aspires to improve the environmental effects of our manufacturing processes and our finished electronic components.

In Europe (RoHS Directive) and in some other geographical areas such as China (China RoHS), legislation has been enacted to prevent or otherwise limit the use of certain hazardous materials, including lead (Pb), in electronic equipment. KEMET monitors legislation globally to ensure compliance and endeavors to adjust our manufacturing processes and/or electronic components as may be required by applicable law.

For military, medical, automotive, and some commercial applications, the use of lead (Pb) in the termination is necessary and/or required by design. KEMET is committed to communicating RoHS compliance to our customers. Information related to RoHS compliance will be provided in data sheets and using specific identifiers on the packaging labels.

All KEMET power film capacitors are RoHS compliant.

Materials & Environment

The selection of raw materials that KEMET uses for the production of its electronic components is the result of extensive experience. KEMET directs specific attention toward environmental protection. KEMET selects its suppliers according to ISO 9001 standards and performs statistical analyses on raw materials before acceptance for use in manufacturing our electronic components. All materials are, to the best of KEMET's knowledge, non-toxic and free from cadmium; mercury; chrome and compounds; polychlorine triphenyl (PCB); bromide and chlorinedioxins bromurate clorurate; CFC and HCFC; and asbestos.

Sealing

Hermetically Sealed Capacitors

As the temperature increases, the pressure inside the capacitor increases. If the internal pressure is high enough, it can cause a breach in the capacitor. Such a breach can result in leakage, impregnation, filling fluid, or moisture susceptibility.

Barometric Pressure

The altitude at which hermetically sealed capacitors are operated controls the capacitor's voltage rating. As the barometric pressure decreases, the susceptibility to terminal arc-over increases. Non-hermetic capacitors can be affected by internal stresses due to pressure changes. These effects can be in the form of capacitance changes, dielectric arc-over, and/or low insulation resistance. Altitude can also affect heat transfer. Heat that is generated in an operation cannot be dissipated properly, and high RI^2 losses and eventual failure can result.

Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.

PRELIMINARY

KEMET is a registered trademark of KEMET Electronics Corporation.
