

### 86mm 1U Front End AC-DC Power Supply

NB: D1U86P-W-1600-12-HB3DC Model Shown

#### **FEATURES**

| 1600W output power   |
|--|
| 94% minimum efficiency at 50% load                                     |
| 12V main output  |
| 12V standby output of 30W  |
| 1U height: 3.4" x 7.78" x 1.59"  |
| 38.6 Watts per cubic inch density                                      |
| N+1 redundancy, including hot plugging (up to 8                        |
| in parallel)   |
| Droop Current sharing both outputs                                     |
| Overvoltage, overcurrent, overtemperature                              |
| protection   |
| Internal cooling fan (variable speed)                                  |
| PMBus <sup>™</sup> / I <sup>2</sup> C interface monitoring and control |
| RoHS compliant   |
| Two Year Warranty  |

### **PRODUCT OVERVIEW**

The D1U86P-W-1600-12-HBxDC products are high efficiency 1600 watt, power factor corrected front end supplies with a 12V main output and a 12V (30W) standby. They have current sharing and up to 8 supplies may be operated in parallel. The supplies may be hot plugged, they recover from over-temperature faults, and have logic and PMBus<sup>™</sup> monitoring and control. Their low profile 1U package and >38.6W/cubic inch power density make them ideal for delivering reliable, efficient power to servers, workstations, storage systems and other 12V distributed power systems.

<sup>1</sup>Ripple and noise measured with a parallel combination of a 1.0µF ceramic and 10µF tantalum capacitor on each of the power module outputs. A short coaxial cable connected directly to the input of a scope is required. <sup>2</sup>To meet ripple and transient step load specifications a minimum load of 4A is required.

86mm 1U Front End AC-DC Power Supply

#### OUTPUT CHARACTERISTICS

| Parameter   | Conditions                        | Min. | Тур. | Max. | Units |  |
|---|-----------------------------------|------|------|------|-------|--|
| Output Rise Monotonicity                                    | No voltage excursion              |      |      |      |       |  |
| Startup Time  | AC ramp up                        |      | 1.5  | 3    | S     |  |
| Transiant Despanse  | 12V, 50% load step, 1.0Aµs di/dt  |      | 600  |      | m\/   |  |
| Transient Response  | 12VSB, 50% load step,1.0Aµs di/dt |      | 600  |      | IIIV  |  |
| Current sharing accuracy (up to 8 in parallel) <sup>3</sup> | At 100% load                      |      |      | ±5   | %     |  |
| Hot Swap Transients   | All outputs remain in regulation  |      |      | 5    | %     |  |
| Holdup Time   | At full load                      | 12   |      |      | ms    |  |
| A   |                                   |      |      |      |       |  |

<sup>3</sup> Load current of 100% applies to each power module max load connected in an N+1 configuration; therefore the total load will be "N" x 100%. The share accuracy of ±5% is a fixed percentage irrespective of total loading and number of units connected in parallel.

| STATUS AND CUNTRU  | JL SIGNAL           | S (CONTINUED)   |  |
|--------------------|---------------------|---|--|
| Signal Name        | I/O                 | Description   | Interface Details  |
| SCL (Serial Clock) | Both                | A serial clock line compatible with PMBus <sup>™</sup> Power Systems Management Protocol Part 1 – General Requirements Rev 1.1.<br>No additional internal capacitance is added that would affect the speed of the bus.<br>The signal is provided with a series isolator device to disconnect the internal power supply bus in the event that the power module is unpowered, | VIL is 0.8V maximum<br>Vo∟ is 0.4V maximum when sinking<br>3mA<br>VIH is 2.1V minimum  |
| SDA (Serial Data)  | Both                | A serial data line compatible with PMBus <sup>™</sup> Power Systems Management Protocol Part 1 – General Requirements Rev 1.1.<br>The signal is provided with a series isolator device to disconnect the internal power supply bus in the event that the power module is unpowered,   | $ \begin{array}{l} V_{I\!L} \text{ is } 0.8V \text{ maximum} \\ V_{0L} \text{ is } 0.4V \text{ maximum when sinking} \\ 3mA \\ V_{I\!H} \text{ is } 2.1V \text{ minimum} \end{array} $ |
| <u>IMONITOR</u>    | Analogue<br>Voltage | An analogue DC output voltage signal directly proportional to load current and can be used as an<br>indication of the power supply's load current. This signal of multiple connected units should not be<br>tied together.  | Analogue output voltage:<br>60.15mV/Amp  |

### STATUS INDICATOR CONDITIONS

|    | LED State             | Mode        | Operating Condition  |
|----|-----------------------|-------------|--|
| 1. | Off                   | AC Turn-off | The incoming AC source is below the minimum power module turn-on specification                         |
| 2. | Green – blinking 1Hz  | Standby     | The power module VStandby output is operating within normal parameters and main output is disabled     |
| 3. | Green – solid         | Power-good  | The power module active; VStandby & Main outputs are operating within normal parameters and delivering |
| 4. | Yellow – blinking 1Hz | Warning     | A warning condition within the power supply has been detected  |
| 5. | Yellow – solid        | Fault       | A fault condition within the power supply has been detected.   |

\*NOTE: The PSOK levels after the loss of the incoming AC source may be either 1.1V or 2.2V depending on the relative timing of the TACPOK\_OFF and TPWRP\_GOOD\_HOLD-Up

| TIMING SPECIFICATIONS |   |     |      |      |
|-----------------------|---|-----|------|------|
| Parameter             | Description   | Min | Max  | Unit |
| Tsb_On                | Delay from AC being applied to standby output being within regulation     | 0   | 3000 | ms   |
| Tsb_Vout              | Delay from standby output to main output voltage being within regulation  | 50  | 500  | ms   |
| TPWR_GOOD_On          | Delay from output voltages within regulation limits to PWR_GOOD assertion | 20  | 500  | ms   |
| TAC_OK_OFF            | Delay from loss of AC to deassertion of AC_OK                             | 20  | 60   | ms   |
| TAC_OK_On             | Delay from AC being applied to assertion of AC_OK                         | 1   | 3000 | ms   |
| TPWR_GOOD_Hold-up     | Delay from loss of AC to deassertion of PWR_GOOD                          | 7   | 30   | ms   |
| TVout_Hold-up         | Delay from loss of AC to main output being out of regulation              | 12  | 20   | ms   |
| Tsb_Hold-up           | Delay from loss of AC to standby output being out of regulation           | 20  | 2000 | ms   |
| TPWR_GOOD_OFF         | Delay from deassertion of PWR_GOOD to output falling out of regulation    | 0   | 2    | ms   |
| TPSON_On_Delay        | Delay from PSON assertion to output being within regulation               | 1   | 200  | ms   |

### **DERATING CURVES**

86mm 1U Front End AC-DC Power Supply

#### WIRING DIAGRAM FOR OUTPUT

#### CURRENT SHARING NOTES

Main Output: Current share is achieved using the droop method. Nominal output voltage (12.20V) is achieved at 50% load and output voltage varies at a rate of 3.10mv per amp increase/decrease. Startup of parallel power supplies is not internally synchronized. If more than 1600W combined power is needed, start-up synchronization must be provided by using a common PS\_ON signal. To account for  $\pm$ 5% full load current sharing accuracy and the reduction in full load output voltage due to droop, available output power must be derated by 10% when units are operated in parallel.

The Standby output can be tied together for redundancy however the total combined power must not exceed the Standby rail capability (30W) of a single supply. Internal MOSFET ORING devices are employed.

86mm 1U Front End AC-DC Power Supply

#### MECHANICAL DIMENSIONS

- 2. 86.4mm x 197.7mm x 40.5mm [3.4" x 7.78" x 1.59"]

Murata Power Solutions, Inc. 129 Flanders Rd. Westborough, Ma 01581, USA. ISO 9001 REGISTERED

Critical Application Sales Policy. Refer to: https://www.murata-ps.com/requirements/ Murata Power Solutions, Inc. ("Murata") makes no representation that the use of its products in the circuits described herein, or the use of other technical information contained herein, will not infringe upon existing or future patent rights. The descriptions contained herein to do not imply the granting of licenses to make, use, or sell equipment constructed in accordance therewith. Buyer represents and agrees that it has all the necessary experises to create and implement safeguards that anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm, and take appropriate media actions. Buyer will fully indemnity Murata, its affiliated companies, and its representatives against any damages arising out of the use of any Murata products in safety-critical applications. Specifications are subject to change without notice.
