GENERAL DESCRIPTION

The **ADG772** is a low voltage CMOS device that contains two independently selectable single-pole, double throw (SPDT) switches. It is designed as a general-purpose switch and can be used for routing both USB 1.1 and USB 2.0 signals.

This device offers a data rate of 1260 Mbps, making the device suitable for high frequency data switching. Each switch conducts equally well in both directions when on and has an input signal range that extends to the supplies. The **ADG772** exhibits break-before-make switching action.

The **ADG772** is available in a 12-lead LFCSP and a 10-lead mini LFCSP. These packages make the **ADG772** the ideal solution for space-constrained applications.
