

Dual Phase Synchronous Step-Up DC/DC Converter

DESCRIPTION

Demonstration circuit 1859A is a dual phase single output DC/DC boost converter featuring the LTC[®]3124. The DC1859A operates over 1.8V to 5.5V input and generates 12V at up to 1.5A from a 5V input. The maximum output current for a 1.8V input is 750mA. Also, the LTC3124 has a 2% precise voltage reference, which can generate an output voltage with 2.2% tolerance if 0.1% voltage divider resistors are used. The 1MHz switching frequency operation results in small and efficient circuit. The converter operates with only one phase in Burst Mode[®] operation

and achieves over 90% efficiency with a 100mA load. The demonstration circuit can be easily modified to generate different output voltages.

The DC1859 has small circuit footprint. It is a high performance and cost effective solution for generating output voltages up to 15V from inputs as low as 1.8V.

QUICK START PROCEDURE

Demonstration circuit 1859 is easy to set up to evaluate the performance of the LTC3124. For proper measurement equipment setup refer to Figure 1 and follow the procedure below:

NOTE: When measuring the input or output voltage ripple, care must be taken to minimize the length of oscilloscope probe ground lead. Measure the input or output voltage ripple by connecting the probe tip directly across the VIN or VOUT and GND terminals as shown in Figure 2.

1. With power off, connect the input power supply to VIN and GND.
2. Keep the load set to 0A or disconnected.

3. Turn the input power source on and slowly increase the input voltage. Be careful not to exceed 5.5V.

NOTE: Make sure that the input voltage V_{IN} does not exceed 5.5V.

4. Set the input voltage to 5V and check for the proper output voltage of 12V. If there is no output, temporarily disconnect the load to make sure that the load is not set too high.
5. Once the proper output voltage is established, adjust the load and observe the output voltage regulation, ripple voltage, efficiency and other parameters.

Changing the Output Voltage

To change the output voltage from the programmed 12V, change the voltage divider resistors connected to LTC3124 FB pin (see the schematic on page 5).

Converter Output Current

The DC1859 output current capability depends on the input voltage. Typical performance of DC1859A is shown in Figure 3. As can be seen from Figure 3, the maximum output current is 800mA with 2.6V input and 2A with 5V input. The efficiency is high at light loads thanks to phase shedding in BURST mode. By disabling one phase the related switching losses are reduced and the efficiency is maximized.

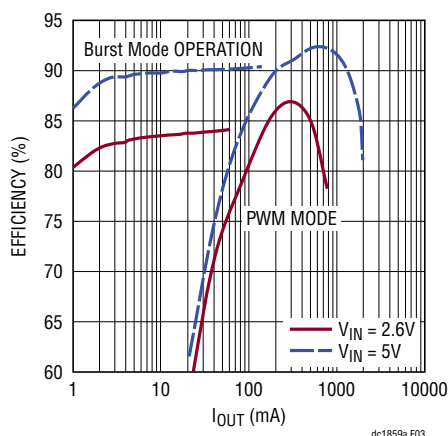

Figure 3. The Efficiency Is Maximized for Light Loads by Shedding One Phase in Burst Mode Operation. The Efficiency Is Over 90% at Higher Loads and It Reaches 92% at 800mA Load

Output Load Step Response

The load step response of DC1859A is dependent on the amount and type of output caps used. If higher load steps need to be handled more output capacitance can be added in order to keep the voltage transients at the desired level. The load step transients are shown in Figure 4. Other types of low ESR and high value capacitors can be used if space is available to reduce load transients to desired level.

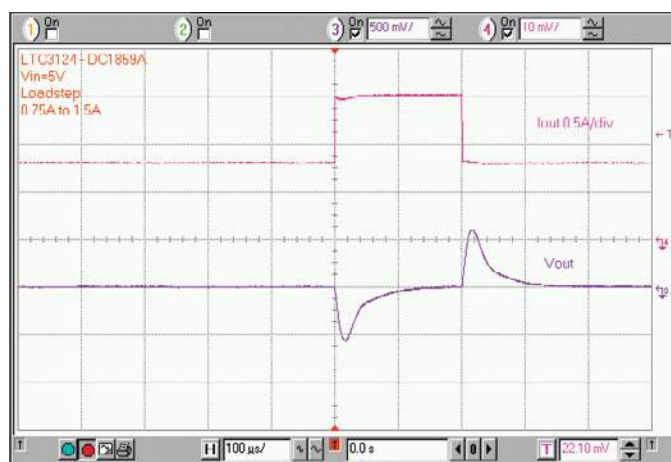

Figure 4. The LTC3124 Has Excellent Load Step Response with Small Output Capacitors Thanks to High Switching Frequency and Fast Feedback Loop Compensation

Start-Up and Soft-Start Function

The DC1859 features internal 10ms soft-start circuit that prevents input current surge at start-up. The soft-start circuit also prevents output voltage overshoot when output voltage ramp reaches regulation.

Output Short Circuit Protection

The LTC3124 features safe short-circuit and thermal protection. The part can operate continuously with output shorted while maintaining a maximum set current limit. The peak switch current is reduced during overload to about 2A and is restored to 3.5A once the output exceeds 1.5V.

DEMO MANUAL DC1859A

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
