

Micropower Precision, Dual/Quad CMOS Rail-to-Rail Input/Output Amplifiers

FEATURES

- Maximum Offset Voltage of 25 μ V (25°C)
- Maximum Offset Drift of 0.7 μ V/°C
- Maximum Input Bias:
 - 1 μ A (25°C)
 - 50 μ A (\leq 85°C)
- Micropower: 54 μ A per Amp
- 95dB CMRR (Min)
- 100dB PSRR (Min)
- Input Noise Voltage Density: 16nV/ $\sqrt{\text{Hz}}$
- Rail-to-Rail Inputs and Outputs
- 2.7V to 5.5V Operation Voltage
- LTC6078 Available in 8-Lead MSOP and 10-Lead DFN Packages; LTC6079 Available in 16-Lead SSOP and DFN Packages

APPLICATIONS

- Photodiode Amplifier
- High Impedance Sensor Amplifier
- Microvolt Accuracy Threshold Detection
- Instrumentation Amplifiers
- Battery Powered Applications

DESCRIPTION

The LTC[®]6078/LTC6079 are dual/quad, low offset, low noise operational amplifiers with low power consumption and rail-to-rail input/output swing.

Input offset voltage is trimmed to less than 25 μ V and the CMOS inputs draw less than 50pA of bias current. The low offset drift, excellent CMRR, and high voltage gain make it a good choice for precision signal conditioning.

Each amplifier draws only 54 μ A current on a 3V supply. The micropower, rail-to-rail operation of the LTC6078/LTC6079 is well suited for portable instruments and single supply applications.

The LTC6078/LTC6079 are specified on power supply voltages of 3V and 5V from -40 to 125°C. The dual amplifier LTC6078 is available in 8-lead MSOP and 10-lead DFN packages. The quad amplifier LTC6079 is available in 16-lead SSOP and DFN packages.

LT, LT, LTC and LTM are registered trademarks of Linear Technology Corporation. All other trademarks are the property of their respective owners. Patent Pending.

TYPICAL APPLICATION

AMPLIFIER PROTECTED TO \pm 190V, ACCIDENTAL CONTACT

LTC6078/LTC6079

ABSOLUTE MAXIMUM RATINGS

(Note 1)

Total Supply Voltage (V^+ to V^-)	6V
Input Voltage.....	V^- to V^+
Output Short Circuit Duration (Note 2)	Indefinite
Operating Temperature Range (Note 3)	
LTC6078C, LTC6079C	-40°C to 85°C

Note 1: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

Note 2: A heat sink may be required to keep the junction temperature below the absolute maximum. This depends on the power supply voltage and how many amplifiers are shorted.

Note 3: The LTC6078C/LTC6079C and LTC6078I/LTC6079I are guaranteed functional over the operating temperature range of -40°C to 85°C . The LTC6078H/LTC6079H are guaranteed functional over the operating temperature range of -40°C to 125°C .

Note 4: The LTC6078C/LTC6079C are guaranteed to meet specified

performance from 0°C to 70°C . The LTC6078C/LTC6079C are designed, characterized and expected to meet specified performance from -40°C to 85°C but are not tested or QA sampled at these temperatures. The LTC6078I/LTC6079I are guaranteed to meet specified performance from -40°C to 85°C . The LTC6078H/LTC6079H are guaranteed to meet specified performance from -40°C to 125°C .

Note 5: V_{OS} and V_{OS} drift are 100% tested at 25°C and 125°C .

Note 6: I_B and I_{OS} are guaranteed by the $V_S = 5\text{V}$ test.

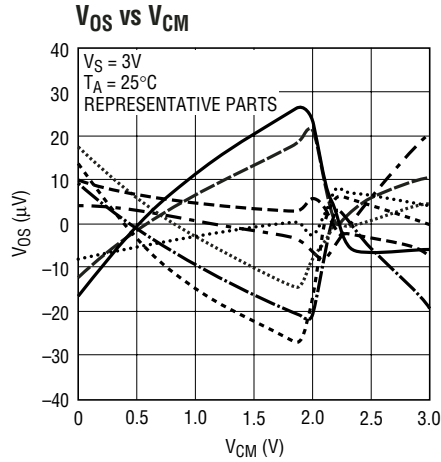

Note 7: V_{OS} drift is guaranteed by the $V_S = 3\text{V}$ test.

Note 8: Current noise is calculated from $i_n = \sqrt{2qI_B}$, where $q = 1.6 \cdot 10^{-19}$ coulomb.

PIN FUNCTIONS

OUT: Amplifier Output

-IN: Inverting Input

+IN: Noninverting Input

V+: Positive Supply

V-: Negative Supply

SHDN_A: Shutdown Pin of Amplifier A, active low and only valid for LTC6078DD. An internal current source pulls the pin to V^+ when floating.

SHDN_B: Shutdown Pin of Amplifier B, active low and only valid for LTC6078DD. An internal current source pulls the pin to V^+ when floating.

NC: Not internally connected.

Exposed Pad: Connected to V^- .

APPLICATIONS INFORMATION

Preserving Input Precision

Preserving input accuracy of the LTC6078/LTC6079 requires that the application circuit and PC board layout do not introduce errors comparable or greater than the $10\mu\text{V}$ typical offset of the amplifiers. Temperature differentials across the input connections can generate thermocouple voltages of 10's of microvolts so the connections to the input leads should be short, close together and away from heat dissipating components. Air current across the board can also generate temperature differentials.

The extremely low input bias currents (0.2pA typical) allow high accuracy to be maintained with high impedance sources and feedback resistors. Leakage currents on the PC board can be higher than the input bias current. For example, $10\text{G}\Omega$ of leakage between a 5V supply lead and an input lead will generate 500pA ! Surround the input leads with a guard ring driven to the same potential as the input common mode to avoid excessive leakage in high impedance applications.

Input Clamps

Large differential voltages across the inputs over very long time periods can impact the precisely trimmed input offset voltage of the LTC6078/LTC6079. As an example, a 2V differential voltage between the inputs over a period of 100 hours can shift the input offset voltage by tens of microvolts. If the amplifier is to be subjected to large differential input voltages, adding back-to-back diodes between the two inputs will minimize this shift and retain the DC precision. If necessary, current-limiting series resistors can be added in front of the diodes, as shown in Figure 1. These diodes are not necessary for normal closed loop applications.

Figure 1. Op Amp with Input Voltage Clamp

Capacitive Load

LTC6078/LTC6079 can drive capacitive load up to 200pF in unity gain. The capacitive load driving capability increases as the amplifier is used in higher gain configurations. A small series resistance between the output and the load further increases the amount of capacitance the amplifier can drive.

SHDN Pins

Pins 5 and 6 are used for power shutdown on the LTC6078 in the DD package. If they are floating, internal current sources pull Pins 5 and 6 to $V+$ and the amplifiers operate normally. In shutdown, the amplifier output is high impedance, and each amplifier draws less than $2\mu\text{A}$ current.

When the chip is turned on, the supply current per amplifier is about $35\mu\text{A}$ larger than its normal values for $50\mu\text{s}$.

Rail-to-Rail Input

The input stage of LTC6078/LTC6079 combines both PMOS and NMOS differential pairs, extending its input common mode voltage range to both positive and negative supply voltages. At high input common mode range, the NMOS pair is on. At low common mode range, the PMOS pair is on. The transition happens when the common voltage is between 1.3V and 0.9V below the positive supply.

Thermal Hysteresis

Figure 2 shows the input offset hysteresis of LTC6078MS8 for 3 thermal cycles from -45°C to 90°C . The typical offset shift after the 3 cycles is only $1\mu\text{V}$.

Figure 2. V_{OS} Thermal Hysteresis of LTC6078MS8

60789fa

APPLICATIONS INFORMATION

PC Board Layout

Mechanical stress on a PC board and soldering-induced stress can cause the V_{OS} and V_{OS} drift to shift. The DD and DHC packages are more sensitive to stress. A simple way to reduce the stress-related shifts is to mount the IC near the short edge of the PC board, or in a corner. The board edge acts as a stress boundary, or a region where the flexure of the board is minimum. The package should always be mounted so that the leads absorb the stress and not the package. The package is generally aligned with the leads parallel to the long side of the PC board.

The most effective technique to relieve the PC board stress is to cut slots in the board around the op amp. These slots can be cut on three sides of the IC and the leads can exit on

the fourth side. Figure 3 shows the layout of a LTC6078DD with slots at three sides.

Humidity Sensor Signal Conditioner

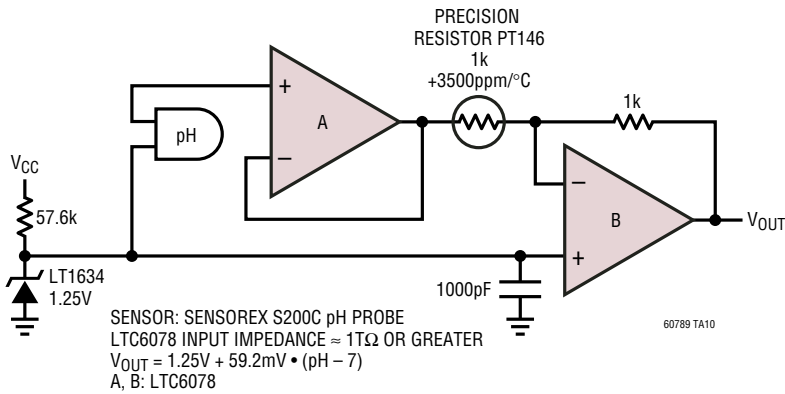

60789fa

TYPICAL APPLICATIONS

LDO Load Balancing

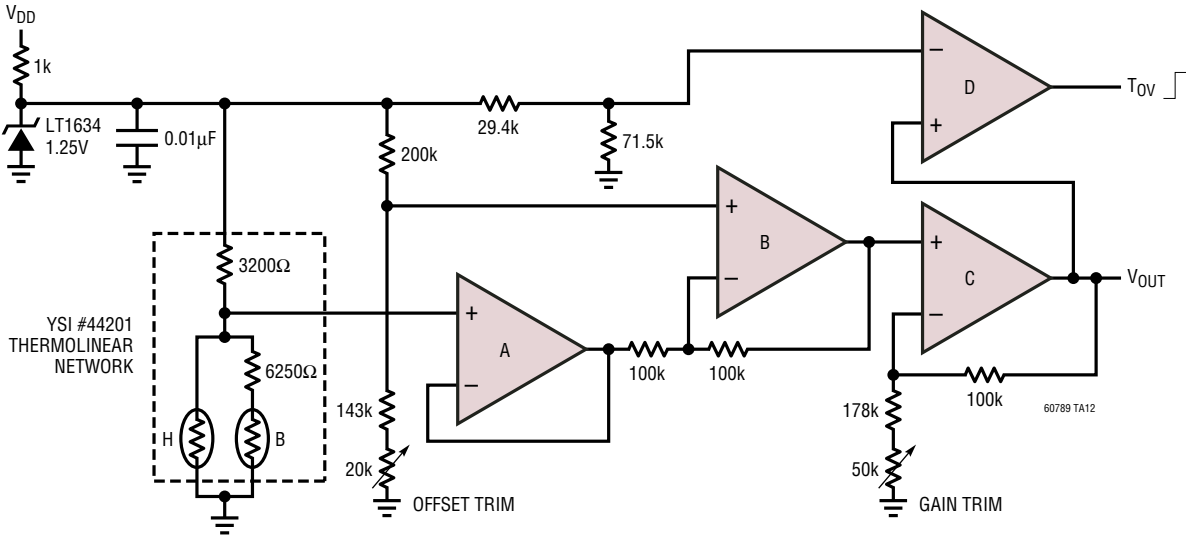

pH Probe Amplifier

TYPICAL APPLICATIONS

Thermistor Amplifier with Overtemperature Alarm

A TO D: LTC6079, $V_{DD} = 2.7V$ TO $5.5V$, $V_{SS} = GND$
 $V_{OUT} = 0 \rightarrow 1V$ FOR $0^{\circ}C$ TO $100^{\circ}C$, LINEAR
 $T_{OV} \rightarrow$ HIGH WHEN $T \geq 90^{\circ}C$

Precision Sample-and-Hold

$I_{SUPPLY} < 200\mu A$
 VOLTAGE DROOP = $130nV/ms$ TYP
 SLEW RATE = $0.05V/ms$ TYP
 ACQ TIME = $84\mu s$ TYP TO 0.1%

60789 TA13

TYPICAL APPLICATIONS

Precision Voltage-Controlled Current Source

60Hz Notch

PACKAGE DESCRIPTION

DD Package
10-Lead Plastic DFN (3mm × 3mm)
 (Reference LTC DWG # 05-08-1699)

RECOMMENDED SOLDER PAD PITCH AND DIMENSIONS

NOTE:

1. DRAWING TO BE MADE A JEDEC PACKAGE OUTLINE M0-229 VARIATION OF (WEED-2). CHECK THE LTC WEBSITE DATA SHEET FOR CURRENT STATUS OF VARIATION ASSIGNMENT
2. DRAWING NOT TO SCALE
3. ALL DIMENSIONS ARE IN MILLIMETERS
4. DIMENSIONS OF EXPOSED PAD ON BOTTOM OF PACKAGE DO NOT INCLUDE MOLD FLASH. MOLD FLASH, IF PRESENT, SHALL NOT EXCEED 0.15mm ON ANY SIDE
5. EXPOSED PAD SHALL BE SOLDER PLATED
6. SHADED AREA IS ONLY A REFERENCE FOR PIN 1 LOCATION ON THE TOP AND BOTTOM OF PACKAGE

PACKAGE DESCRIPTION

MS8 Package
8-Lead Plastic MSOP
 (Reference LTC DWG # 05-08-1660)

- NOTE:
1. DIMENSIONS IN MILLIMETER/(INCH)
 2. DRAWING NOT TO SCALE
 3. DIMENSION DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS.
MOLD FLASH, PROTRUSIONS OR GATE BURRS SHALL NOT EXCEED 0.152mm (.006") PER SIDE
 4. DIMENSION DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSIONS.
INTERLEAD FLASH OR PROTRUSIONS SHALL NOT EXCEED 0.152mm (.006") PER SIDE
 5. LEAD COPLANARITY (BOTTOM OF LEADS AFTER FORMING) SHALL BE 0.102mm (.004") MAX

PACKAGE DESCRIPTION

GN Package 16-Lead Plastic SSOP (Narrow .150 Inch) (Reference LTC DWG # 05-08-1641)

- NOTE:
1. CONTROLLING DIMENSION: INCHES
 2. DIMENSIONS ARE IN $\frac{\text{INCHES}}{\text{(MILLIMETERS)}}$
 3. DRAWING NOT TO SCALE
- *DIMENSION DOES NOT INCLUDE MOLD FLASH. MOLD FLASH SHALL NOT EXCEED 0.006^* (0.152mm) PER SIDE
- **DIMENSION DOES NOT INCLUDE INTERLEAD FLASH. INTERLEAD FLASH SHALL NOT EXCEED 0.010^* (0.254mm) PER SIDE

TYPICAL APPLICATION

DC Accurate Composite Amplifier, Gain of 1000
