

# OW Series Digital Multimeter Technical Specifications

Standard conditions: The environment temperature is 18°C to 28°C, the relative humidity is less than 80%.

**Note:** When measuring AC voltage/current or capacitance, accuracy guarantee range is 5% to 100% of the range.

[1] The rotary switch position **mV** is only for specific models.

[2] When measuring current, for 10 A to 15 A, the measuring duration should not be over 2 minutes within 10 minutes, and in this 10 minutes, no other current should flow through except within the measuring duration; for 15 A to 20 A, the measuring duration should not be over 10 seconds within 15 minutes, and in this 15 minutes, no other current should flow through except within the measuring duration.

[3] When measuring capacitance, for the 20.00mF range, the measuring duration should be over 30 seconds.

[4] When measuring frequency, the typical waveform is Square or Sine. The signal meets the following conditions.

Frequency	Amplitude (rms)
1 Hz – 4 MHz	$\geq 100$ mV
4 Hz – 8 MHz	$\geq 200$ mV
8 Hz – 10 MHz	$\geq 300$ mV

[5] When measuring duty cycle, the typical waveform is Square.

**Note:** when measuring resistance and capacitance, the influence of the resistance reactance of the pen itself on the measured value should be considered.
