

Technical Data Sheet *Simpson* 5002 / 5003 / 5005 / 5006

Simpson 5002 5003 5005 5006 series of new multimeters is made for professional use that offers safety, high resolution, large range count, reliability, ruggedness, a complete tool for test automation and is equipped with more than 30 different measuring functions.

Special Features

- → True RMS Digital Multimeter
- → Data logger & View function (up to 32000 readings)
- → Plug and Play USB connectivity with PC
- → 100kHz bandwidth for voltage measurement
- → 1kHz Low Pass Filter mode
- ➔ GO-NO-GO function
- → VAC with 1MOhm impedance 4-20mA/0-20mA scale type measurement
- → Single fuse for mA & A
- → Adjustable square wave output
- → Temperature measurement with J, K, Pt100 & Pt1000 sensors
- → External power adapter for long hours of measurements
- Selectable clamp ratio for current measurement
- Conductance Measurement
- Frequency / Time Period Measurement

Application

Low input impedance ($Ri = 1M\Omega$)

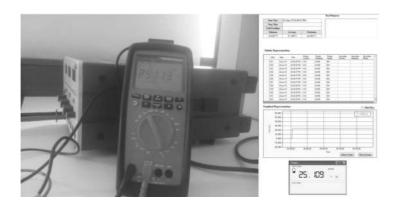

Trouble shooting a branch circuit with dead or disconnected circuit is made easy with VAC1M. Low impedance VAC1M measurement helps eliminating error readings resulting from ghost voltages caused by long wires that share a common conduit

Single fuse(16A)

Instrument contains a single fuse of 16A common for all the ranges of current from 600μ A to 10A AC/DC as compared to the two fuses in traditional DMMs. This eliminates the accidental blowing of 1.6A fuse due to operator's error when higher current is applied in lower ranges

Tool for automation, USB 2.0 Interface

With ready to use communication protocol and plug and play USB 2.0 add-on device, one can easily automate his test system. The extensive data capturing and analysis is possible with DMM software. With vast functionality and editable report settings DMM software is a real help for easy report generation and analysis of a device under test.

Square Wave Output

A square wave output can be generated from the DMM with the user selectable frequency and adjustable duty cycle. This can be used as baud rate generator, to check flow meters, to test frequency counters, accelerometer and frequency transmitter. It can also be used as audio signal in audio signal testing.

Current measurement with clamp sensor

Measurement with various clamp sensors is possible, which helps in accurate measurement of current from 60mA to 6000A without interrupting the circuit. The measured current is automatically calculated from the selected clamp ratio.

Low pass filter(LPF) in VAC10MΩ & VAC1MΩ

A selectable 1kHz low pass filter offers advanced variable frequency drive filtering to help you accurately analyze nontraditional sine waves and noisy signals.

In LPF mode DMM rejects all high frequency noise making it suitable for making measurements on inverters and high frequency drives.

True RMS measurement with high crest factors

Accurate true RMS measurement of distorted waveform with crest factor CF between 1 to 10.

Data Logging

DMM 5005/5006 offers continuous data logging of up to 32000 readings with real time stamping. Log rate is adjustable from as low as 0.1 sec to as high as 1hr.

Adjustable Beep Level

With Beep level setting, the limit for continuity can be adjusted from 10Ω to 90Ω depending upon application.

Separate fuse compartment

Easier access to fuse when replacing the blown fuse.

Auto Power OFF with adjustable timing

Flexibility to adjust "Auto off " period from 5 minutes to 60 minutes.

60mv & 600mV DC & ACDC

This helps in accurate measurement of low output voltages <600mV from sensors & transmitters. High frequency low voltage signal from RF transmitters can also be measured. Signal as low as 0.001mV can be measured accurately.

Min / Max / Avg measurement

Min/Max/Avg function records the minimum, maximum and average of all the readings applied since its activation. With dual display it makes it even flexible for the user to keep the trace of the applied readings while viewing Min/Max/Avg readings. The average reading is useful for smoothing out unstable inputs,& verifying circuit performance.

Dedicated keys for easy navigation

Dedicated navigation keys makes scrolling through menu and setting of parameters easy & comfortable.

External Power Adapter (DC Jack)

The external power supply adapter helps in conserving battery while performing long hours of measurements. When DC jack is connected batteries inside DMM are electronically disconnected, and reconnected in absence of mains, hence there is no need of removing the battery when using the power adapter.

100kHz Bandwidth

Alternating voltages with frequencies up to 100kHz can be measured accurately. This is useful while analyzing high frequency analog signals.

Self battery voltage measurement

Capable of measuring self battery voltage.

Room temperature measurement

Room temperature can be sensed and measured without any external sensor. The same is used as internal reference temperature in thermocouple based temperature measurements

Fully programmable GO NO-GO

The Go-NoGo function gives an indication through a buzzer for the applied input lying inside or outside the set band. The values for low limit, high limit and buzzer condition can be easily set through NoGo function in menu settings. Once the NoGo function is set, user can get busy doing other activities in the vicinity of the meter, whenever the condition is met it will be indicated by a buzzer. It eliminates the need of operator to continuously monitor the display.

View Function

Data logged on meter can be viewed directly on the meter itself, hence the data analysis is also possible without a PC based software. However for graphical and large data analysis PC based software can be used.

Dangerous Contact Voltage Indication

Presence of hazardous voltage (>35Vrms 50/60Hz and 50Vdc) at the contact terminal are indicated on display. This is very useful while performing measurements in the circuit which takes longer time to discharge its capacitors, or where unexpected danger voltage are present.

Model Wise Functional Overview

EMC Immunity	IEC 61326-1:2012, Table A.1
Immunity	IEC 61000-4-2 : 8 KV atmosphere discharge, 4 KV contact discharge
	IEC 61000-4-3 : 3 V/m
Safety	IEC 61010-1-2010
IP for water & dust	IEC 60529 : IP 50 For Instrument and IP20 for socket
Pollution degree:	2
Installation category:	1000 V CATIII / 600 V CATIV, 600V CATII for DMM 5003
High Voltage Test	7.4 kV (IEC 61010-1-2010), 3.5kV For DMM 5003
Test & Procedure	IS 13875

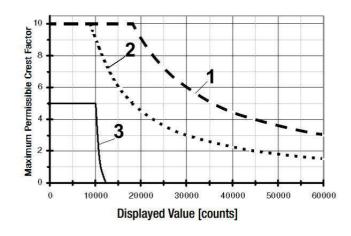

Battery

Battery Voltage	2 X 1.5 V Cells (LR6 Battery)
Battery type	Alkaline manganese cells.
Battery Life	Appx. 100 Hrs. (Backlight off)
Battery test	Automatic display of 🖾 symbol when battery voltage drops below approx. 2.4V

Mechanical Design

Housing	PC ABS
Dimension	200 x 91 x 54 mm
Weight	Approx. 0.5 kg with batteries

Crest Factor

Additional error caused by signal's crest factor: 1 < CF < 3: 1% R+ 30D 3 < CF < 10: 3% R **Curve 1**: Range from 0.06V to 60V,

0.6mA to 60mA, 6A

Curve 2: Range 600V 600mA

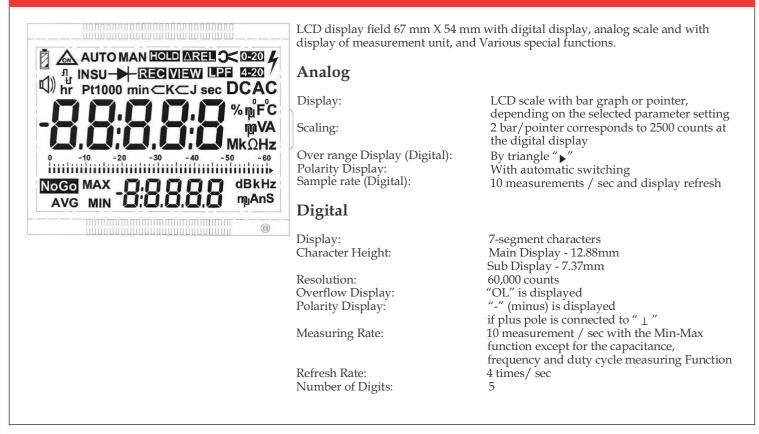

Curve 3: Range 1000V 10A

Note: With Unknown Waveform (CF >2), measurement should be made with manual range selection. R = Reading D = Digit

Internal Clock

Time Format	dd.MM.yy hh.mm.ss
Resolution	1s
Accuracy	±1min. per month
Temperature Influence	50 ppm/K

Display

Fuse

Fuse	FF (UR) 16 A/ 1000 V AC/DC; 10 mm x 38 mm (Simpson 5005 & 5006)
ruse	FF (UR) 1.6 A/ 1000 V AC/DC; 6.3 mm x 32 mm (Simpson 5002)
Switching Capacity	30 kA at 1000 V AC/DC (Simpson 5005 & 5006)
	10 kA at 1000 V AC/DC (Simpson 5002)

Accessories For Operation at a PC

Interface Adapter For USB Communication

Communication:Bi-DirectionalBaud Rate:9600Data Bit:8Stop Bit:1Flow Control:None

A CD ROM is included which contains current drivers for Windows operating systems, Installation Guide, Datalogger User Manual and Datalogger Setup File.
