

# 76-77 GHz RF receiver front-end for W-band radar applications

The MR2001 is a scalable three package solution for automotive radar modules. The chipset consists of a four channel VCO (voltage controlled oscillator), a two-channel Tx transmitter, and a three-channel Rx receiver. The MR2001R is a high performance, highly integrated, three-channel, receiver (RX) ideally suited for automotive radar applications. In conjunction with the MR2001V, a four-channel voltage controlled oscillator, and an MR2001T, a two-channel transmitter, it provides a scalable three package solution for automotive radar modules.
