TXB0108 8-Bit Bidirectional Voltage-Level Translator with Auto-Direction Sensing and ±15-kV ESD Protection

1 Features

- 1.2 V to 3.6 V on A Port and 1.65 V to 5.5 V on B Port ($V_{CCA} \leq V_{CCB}$)
- V_{CC} Isolation Feature – If Either V_{CC} Input Is at GND, All Outputs Are in the High-Impedance State
- OE Input Circuit Referenced to V_{CCA}
- Low Power Consumption, 4-µA Max I_{CC}
- I_{off} Supports Partial-Power-Down Mode Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
  - A Port
    - 2000-V Human-Body Model (A114-B)
    - 1000-V Charged-Device Model (C101)
  - B Port
    - ±15-kV Human-Body Model (A114-B)
    - ±8-kV Human-Body Model (A114-B) (YZP Package Only)
    - 1000-V Charged-Device Model (C101)

2 Applications

- Handset
- Smartphone
- Tablet
- Desktop PC

3 Description

This 8-bit noninverting translator uses two separate configurable power-supply rails. The A port is designed to track V_{CCA}. V_{CCA} accepts any supply voltage from 1.2 V to 3.6 V. The B port is designed to track V_{CCB}. V_{CCB} accepts any supply voltage from 1.65 V to 5.5 V. This allows for universal low-voltage bidirectional translation between any of the 1.2-V, 1.5-V, 1.8-V, 2.5-V, 3.3-V, and 5-V voltage nodes. V_{CCA} should not exceed V_{CCB}.

When the output-enable (OE) input is low, all outputs are placed in the high-impedance state.

The TXB0108 is designed so that the OE input circuit is supplied by V_{CCA}.

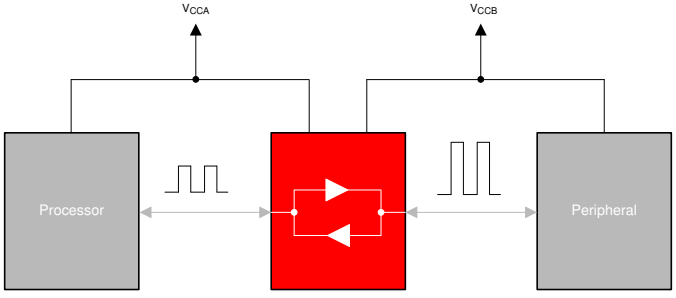
This device is fully specified for partial-power-down applications using I_{off}. The I_{off} circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

To ensure the high-impedance state during power-up or power-down, OE should be tied to GND through a pulldown resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver.

Device Information

PART NUMBER	PACKAGE(1)	BODY SIZE (NOM)
TXB0108DQS	SON (20)	2.00 mm x 4.00 mm
TXB0108ZXY	BGA MICROSTAR JUNIOR (20)	2.50 mm x 3.00 mm
TXB0108PW	TSSOP (20)	6.50 mm x 4.40 mm
TXB0108RGY	VQFN (20)	4.50 mm x 3.50 mm
TXB0108YZP	DSGBA (20)	1.90 mm x 2.40 mm
TXB0108NME	nFBGA (20)	2.50 mm x 3.00 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.



Typical Application Block Diagram for TXB0108

An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. PRODUCTION DATA.

Table of Contents

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision G (December 2018) to Revision H (August 2020) **Page**

- Updated the numbering format for tables, figures and cross-references throughout the document....1
- Added NME package option to *Device Information* table....1
- Added NME package to Figure 5-1....3
- Added NME package to *Pin Assignments* table....3
- Added NME package to *Thermal Information* table....6

Changes from Revision F (November 2014) to Revision G (December 2018) **Page**

- Added pinout image for the ZYPR2 package option....3
- Added text string 'GRID LOCATOR' to Pin Functions table YZP column to clarify pin location from 'Signal Name'....3

Changes from Revision E (April 2012) to Revision F (October 2014) **Page**

- Added *Pin Configuration and Functions* section, *Handling Rating* table, *Feature Description* section, *Device Functional Modes*, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section....1
- Changed V_{OLA} value 0.9 to 0.3....6

Changes from Revision D (September 2011) to Revision E (April 2012) **Page**

- Added notes to pin out graphics....3

Changes from Revision C (August 2011) to Revision D (September 2011) **Page**

- Added ±8-kV Human-Body Model (A114-B) (YZP Package Only) to Features....1

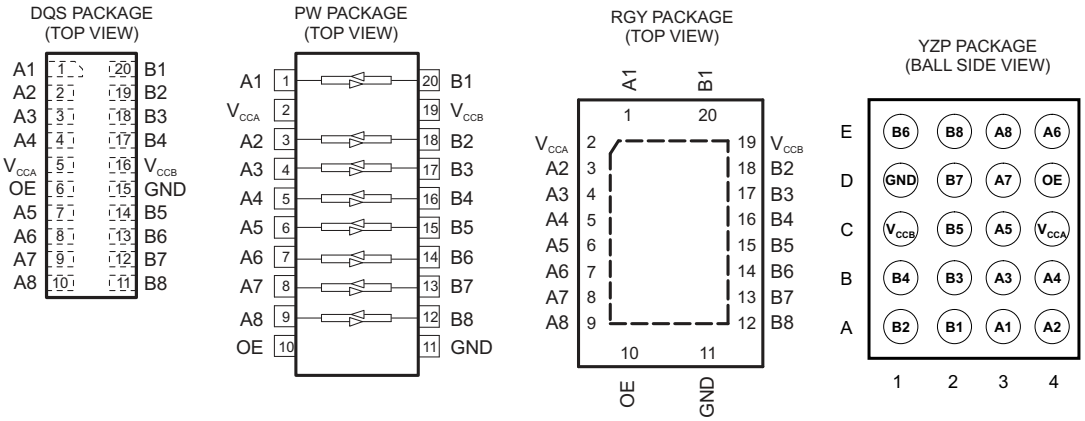
5 Pin Configuration and Functions



A. For the RGY package, the exposed center thermal pad must be connected to ground.
B. Pullup resistors are not required on both sides for Logic I/O.
C. If pullup or pulldown resistors are needed, the resistor value must be over 50 kΩ.
D. 50 kΩ is a safe recommended value, if the customer can accept higher V_{OL} or lower V_{OH}, smaller pullup or pulldown resistor is allowed, the draft estimation is $V_{OL} = V_{CCOUT} \times 4.5\ k/(4.5\ k + R_{PU})$ and $V_{OH} = V_{CCOUT} \times R_{DW}/(4.5\ k + R_{DW})$.
E. If pullup resistors are needed, please refer to the TXS0108 or contact TI.
F. For detailed information, please refer to application note SCEA043.

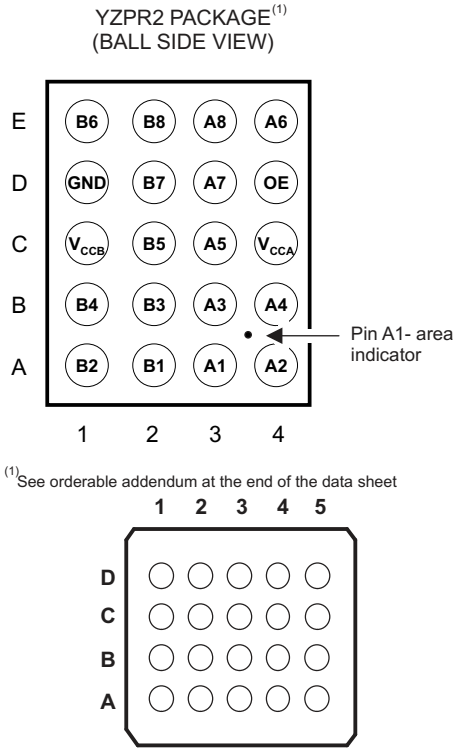


Figure 5-1. NME/GXY/ZXY PACKAGE (BOTTOM VIEW)

Table 5-1. Pin Functions

PIN				I/O[1]	FUNCTION
SIGNAL NAME	PW, RGY NO.	DQS NO.	YZP GRID LOCATOR		
A1	1	1	A3	I/O	Input/output 1. Referenced to V_{CCA}.
V_{CCA}	2	5	C4	S	A-port supply voltage. 1.1 V ≤ V_{CCA} ≤ 3.6 V, V_{CCA} ≤ V_{CCB}.
A2	3	2	A4	I/O	Input/output 2. Referenced to V_{CCA}.
A3	4	3	B3	I/O	Input/output 3. Referenced to V_{CCA}.
A4	5	4	B4	I/O	Input/output 4. Referenced to V_{CCA}.
A5	6	7	C3	I/O	Input/output 5. Referenced to V_{CCA}.
A6	7	8	E4	I/O	Input/output 6. Referenced to V_{CCA}.
A7	8	9	D3	I/O	Input/output 7. Referenced to V_{CCA}.
A8	9	10	E3	I/O	Input/output 8. Referenced to V_{CCA}.
OE	10	6	D4	I	Output enable. Pull OE low to place all outputs in 3-state mode. Referenced to V_{CCA}.
GND	11	15	D1	S	Ground
B8	12	11	E2	I/O	Input/output 8. Referenced to V_{CCB}.
B7	13	12	D2	I/O	Input/output 7. Referenced to V_{CCB}.
B6	14	13	E1	I/O	Input/output 6. Referenced to V_{CCB}.
B5	15	14	C2	I/O	Input/output 5. Referenced to V_{CCB}.
B4	16	17	B1	I/O	Input/output 4. Referenced to V_{CCB}.
B3	17	18	B2	I/O	Input/output 3. Referenced to V_{CCB}.
B2	18	19	A1	I/O	Input/output 2. Referenced to V_{CCB}.
V_{CCB}	19	16	C1	S	B-port supply voltage. 1.65 V ≤ V_{CCB} ≤ 5.5 V.
B1	20	20	A2	I/O	Input/output 1. Referenced to V_{CCB}.
Thermal Pad	—			—	For the RGY package, the exposed center thermal pad must be connected to ground.

(1) I = input, O = output, I/O = input and output, S = power supply

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)

(1)			MIN	MAX	UNIT
V_{CCA}	Supply voltage range		–0.5	4.6	V
V_{CCB}	Supply voltage range		–0.5	6.5	V
V_I	Input voltage range(2)		–0.5	6.5	V
V_O	Voltage range applied to any output in the high-impedance or power-off state(2)		–0.5	6.5	V
V_O	Voltage range applied to any output in the high or low state(2) (3)	A inputs	–0.5	V_{CCA} + 0.5	V
		B inputs	–0.5	V_{CCB} + 0.5	
I_{IK}	Input clamp current	V_I < 0		–50	mA
I_{OK}	Output clamp current	V_O < 0		–50	mA
I_O	Continuous output current			±50	mA
	Continuous current through V_{CCA}, V_{CCB}, or GND			±100	mA
T_{stg}	Storage temperature range		–65	150	°C
T_J	Junction temperature			150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
(3) The value of V_{CCA} and V_{CCB} are provided in the recommended operating conditions table.

6.2 Handling Ratings

			MIN	MAX	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins(1), A Port		2	kV
		Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins(1), B Port	–15	15	
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins(2), A Port		1	
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins(2), A Port (YZP Package only)	–8	8	
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins(2), B Port		1	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)(1) (2)

			V_{CCA}	V_{CCB}	MIN	MAX	UNIT
V_{CCA}	Supply voltage				1.2	3.6	V
V_{CCB}					1.65	5.5	
V_{IH}	High-level input voltage	Data inputs	1.2 V to 3.6 V	1.65 V to 5.5 V	V_{CCI} x 0.65(3)	V_{CCI}	V
		OE			V_{CCA} x 0.65	5.5	
V_{IL}	Low-level input voltage	Data inputs	1.2 V to 5.5 V	1.65 V to 5.5 V	0	V_{CCI} x 0.35(3)	V
		OE	1.2 V to 3.6 V		0	V_{CCA} x 0.35	
Δt/Δv	Input transition rise or fall rate	A-port inputs	1.2 V to 3.6 V	1.65 V to 5.5 V		40	ns/V
		B-port inputs	1.2 V to 3.6 V	1.65 V to 3.6 V		40	
				4.5 V to 5.5 V		30	

Copyright © 2022 Texas Instruments Incorporated

6.3 Recommended Operating Conditions (continued)

over operating free-air temperature range (unless otherwise noted)(1) (2)

		V_{CCA}	V_{CCB}	MIN	MAX	UNIT
T_A	Operating free-air temperature			–40	85	°C

(1) The A and B sides of an unused data I/O pair must be held in the same state, i.e., both at V_{CCI} or both at GND.
(2) V_{CCA} must be less than or equal to V_{CCB} and must not exceed 3.6 V.
(3) V_{CCI} is the supply voltage associated with the input port.

6.4 Thermal Information

THERMAL METRIC(1)		TXB0108							UNIT
		PW	RGY	DQS	YZP	GXY	ZXY	NME	
		20 PINS							
$R_{\theta JA}$	Junction-to-ambient thermal resistance	101.8	35.3	108.5	66.2	156.7	156.7	131.4	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	35.5	42.1	32.3	0.4	39.9	39.9	56.5	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	52.8	11.1	42.4	52.0	85.9	85.9	83.2	°C/W
ψ_{JT}	Junction-to-top characterization parameter	2.2	0.7	0.7	1.5	1.1	1.1	1.5	°C/W
ψ_{JB}	Junction-to-board characterization parameter	52.2	11.2	42	51.9	85.4	85.4	82.6	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	–	3.8	–	–	–	–	–	°C/W

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, SPRA953.

6.5 Electrical Characteristics

over recommended operating free-air temperature range (unless otherwise noted)(1) (2)

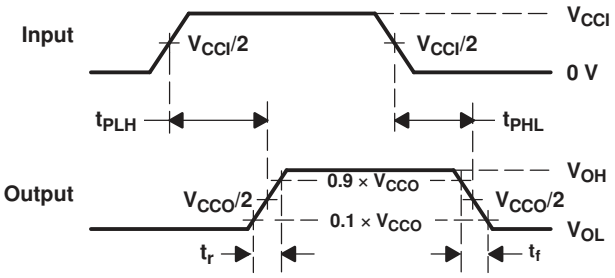
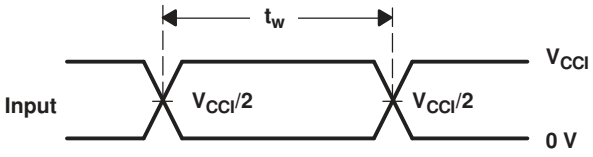
t_{PZL}/t_{PLZ} t_{PHZ}/t_{PZH}	$2 \times V_{CCO}$ Open



VOLTAGE WAVEFORMS PROPAGATION DELAY TIMES



VOLTAGE WAVEFORMS PULSE DURATION

A. C_L includes probe and jig capacitance.
B. All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z_O = 50 Ω, dv/dt ≥ 1 V/ns.
C. The outputs are measured one at a time, with one transition per measurement.
D. t_{PLH} and t_{PHL} are the same as t_{pd}.
E. V_{CCI} is the V_{CC} associated with the input port.
F. V_{CCO} is the V_{CC} associated with the output port.
G. All parameters and waveforms are not applicable to all devices.

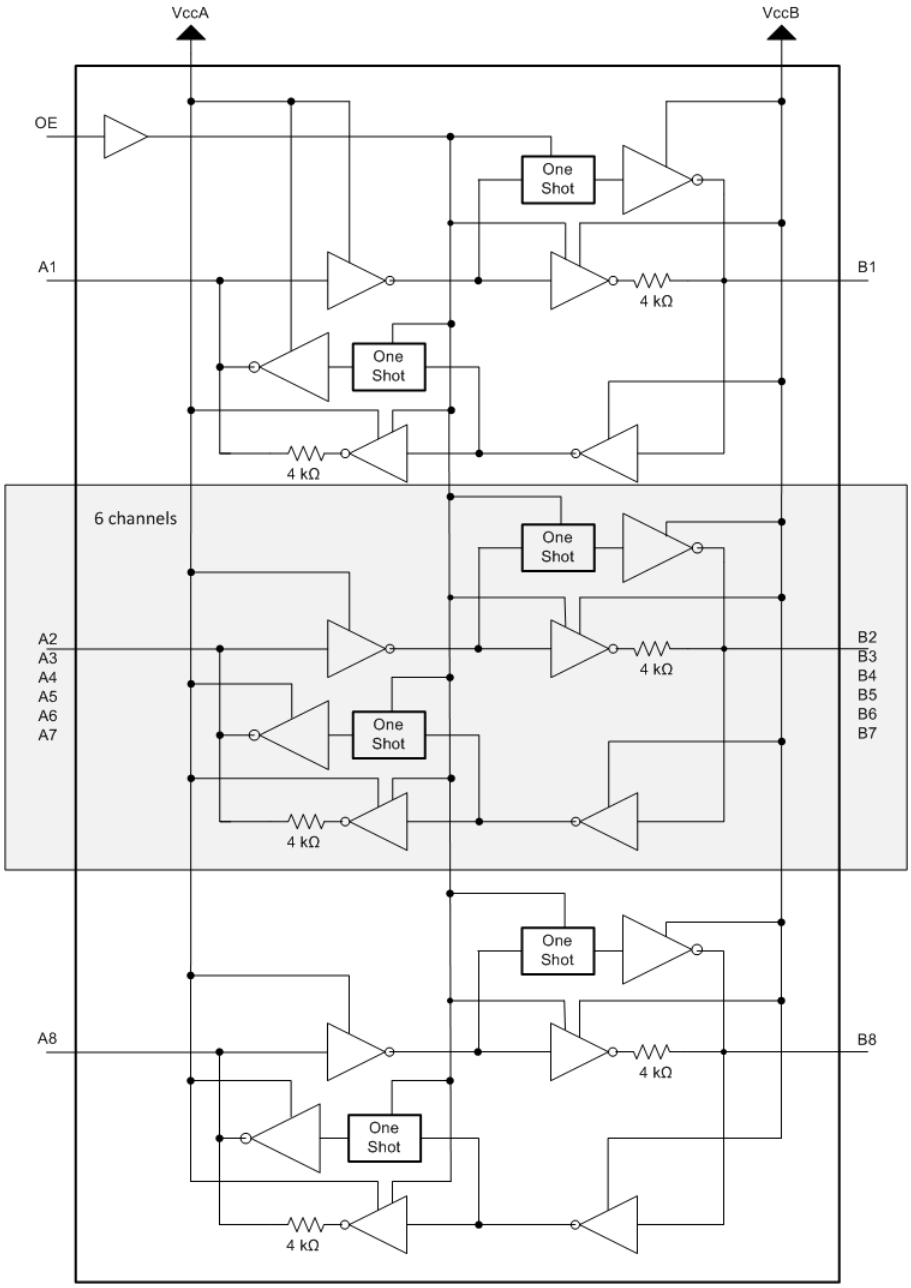
8 Detailed Description

8.1 Overview

The TXB0108 device is an 8-bit, directionless voltage-level translator specifically designed for translating logic voltage levels. The A port is able to accept I/O voltages ranging from 1.2 V to 3.6 V, while the B port can accept I/O voltages from 1.65 V to 5.5 V. The device is a buffered architecture with edge-rate accelerators (one-shots) to improve the overall data rate. This device can only translate push-pull CMOS logic outputs. If for open-drain signal translation, please refer to TI TXS products.

8.2 Functional Block Diagram



8.3 Feature Description

8.3.1 Architecture

The TXB0108 architecture (see Figure 8-1) does not require a direction-control signal to control the direction of data flow from A to B or from B to A. In a dc state, the output drivers of the TXB0108 can maintain a high or low, but are designed to be weak so that they can be overdriven by an external driver when data on the bus starts flowing the opposite direction. The output one-shots detect rising or falling edges on the A or B ports. During a rising edge, the one-shot turns on the PMOS transistors (T1, T3) for a short duration, which speeds up the low-to-high transition. Similarly, during a falling edge, the one-shot turns on the NMOS transistors (T2, T4) for a short duration, which speeds up the high-to-low transition. The typical output impedance during output transition is 70 Ω at VCCO = 1.2 V to 1.8 V, 50 Ω at VCCO = 1.8 V to 3.3 V and 40 Ω at VCCO = 3.3 V to 5 V.

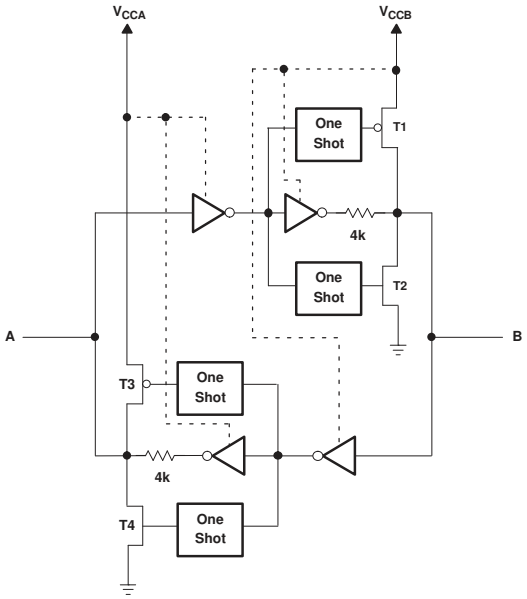


Figure 8-1. Architecture of TXB0108 I/O Cell

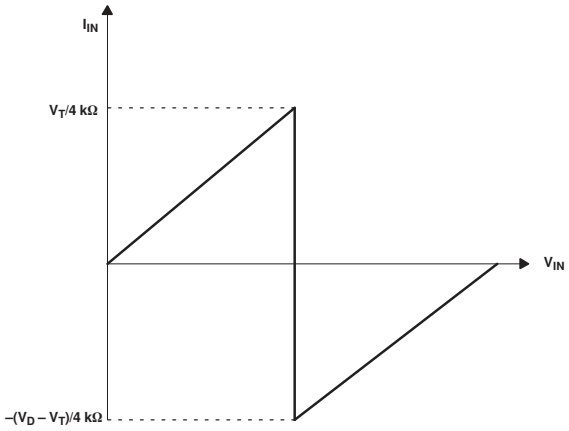
8.3.2 Input Driver Requirements

Typical I_{IN} vs V_{IN} characteristics of the TXB0108 are shown in Figure 8-2. For proper operation, the device driving the data I/Os of the TXB0108 must have drive strength of at least ±2 mA.



A. V_T is the input threshold voltage of the TXB0108 (typically $V_{CCI}/2$).
B. V_D is the supply voltage of the external driver.

Figure 8-2. Typical I_{IN} vs V_{IN} Curve

8.3.3 Output Load Considerations

TI recommends careful PCB layout practices with short PCB trace lengths to avoid excessive capacitive loading and to ensure that proper O.S. triggering takes place. PCB signal trace-lengths should be kept short enough such that the round-trip delay of any reflection is less than the one-shot duration. This improves signal integrity by ensuring that any reflection sees a low impedance at the driver. The O.S. circuits have been designed to stay on for approximately 10 ns. The maximum capacitance of the lumped load that can be driven also depends directly on the one-shot duration. With very heavy capacitive loads, the one-shot can time-out before the signal is driven fully to the positive rail. The O.S. duration has been set to best optimize trade-offs between dynamic ICC, load driving capability, and maximum bit-rate considerations. Both PCB trace length and connectors add to the capacitance that the TXB0108 output sees, so it is recommended that this lumped-load capacitance be considered to avoid O.S. re-triggering, bus contention, output signal oscillations, or other adverse system-level affects.

8.3.4 Enable and Disable

The TXB0108 has an OE input that is used to disable the device by setting OE = low, which places all I/Os in the high-impedance (Hi-Z) state. The disable time (tdis) indicates the delay between when OE goes low and when the outputs actually get disabled (Hi-Z). The enable time (ten) indicates the amount of time the user must allow for the one-shot circuitry to become operational after the OE is high.

8.3.5 Pullup or Pulldown Resistors on I/O Lines

The TXB0108 is designed to drive capacitive loads of up to 70 pF. The output drivers of the TXB0108 have low dc drive strength. If pullup or pulldown resistors are connected externally to the data I/Os, their values must be kept higher than 50 kΩ to ensure that they do not contend with the output drivers of the TXB0108. For the same reason, the TXB0108 should not be used in applications such as I2C or 1-Wire where an open-drain driver is connected on the bidirectional data I/O. For these applications, use a device from the TI TXS01xx series of level translators.

8.4 Device Functional Modes

The TXB0108 device has two functional modes, enabled and disabled. To disable the device, set the OE input low, which places all I/Os in a high impedance state. Setting the OE input high will enable the device.

9 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

9.1 Application Information

The TXB0108 can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. It can only translate push-pull CMOS logic outputs. If for open-drain signal translation, please refer to TI TXS010X products. Any external pulldown or pullup resistors are recommended to be larger than 50kΩ.

9.2 Typical Application

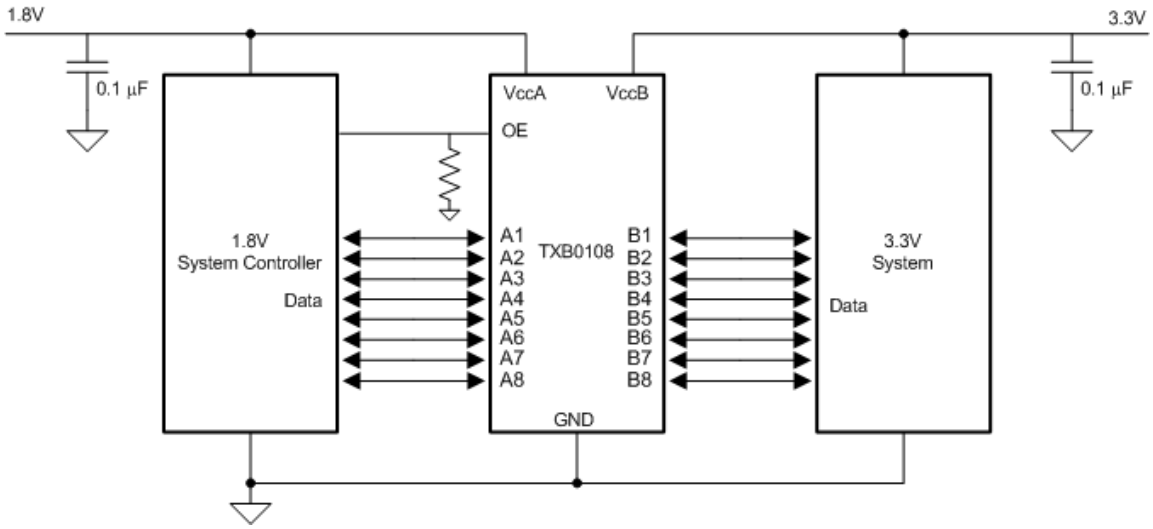

Figure 9-1. Typical Operating Circuit

9.2.1 Design Requirements

For this design example, use the parameters listed in Table 9-1. Make sure the VCCA ≤VCCB.

Table 9-1. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage range	1.2 V to 3.6 V
Output voltage range	1.65 V to 5.5 V

9.2.2 Detailed Design Procedure

To begin the design process, determine the following:

• Input voltage range

- Use the supply voltage of the device that is driving the TXB0108 device to determine the input voltage range. For a valid logic high the value must exceed the VIH of the input port. For a valid logic low, the value must be less than the VIL of the input port.

• Output voltage range

- Use the supply voltage of the device that the TXB0108 device is driving to determine the output voltage range.

Copyright © 2022 Texas Instruments Incorporated

- Do not recommend having the external pullup or pulldown resistors. If mandatory, it is recommended the value should be larger than 50 kΩ.

• An external pulldown or pullup resistor decreases the output V_{OH} and V_{OL}. Use the below equations to draft estimate the V_{OH} and V_{OL} as a result of an external pulldown and pullup resistor.

$V_{OH} = V_{CCx} \times R_{PD} / (R_{PD} + 4.5\ k\Omega)$

$V_{OL} = V_{CCx} \times 4.5k\Omega / (R_{PU} + 4.5\ k\Omega)$

Where:

• V_{CCx} is the output port supply voltage on either VCCA or VCCB

• R_{PD} is the value of the external pull down resistor

• R_{PU} is the value of the external pull up resistor

• 4.5 kΩ is the counting the variation of the serial resistor 4 kΩ in the I/O line. Refer to the Effects of external pullup and pulldown resistors on TXB application note

9.2.3 Application Curves

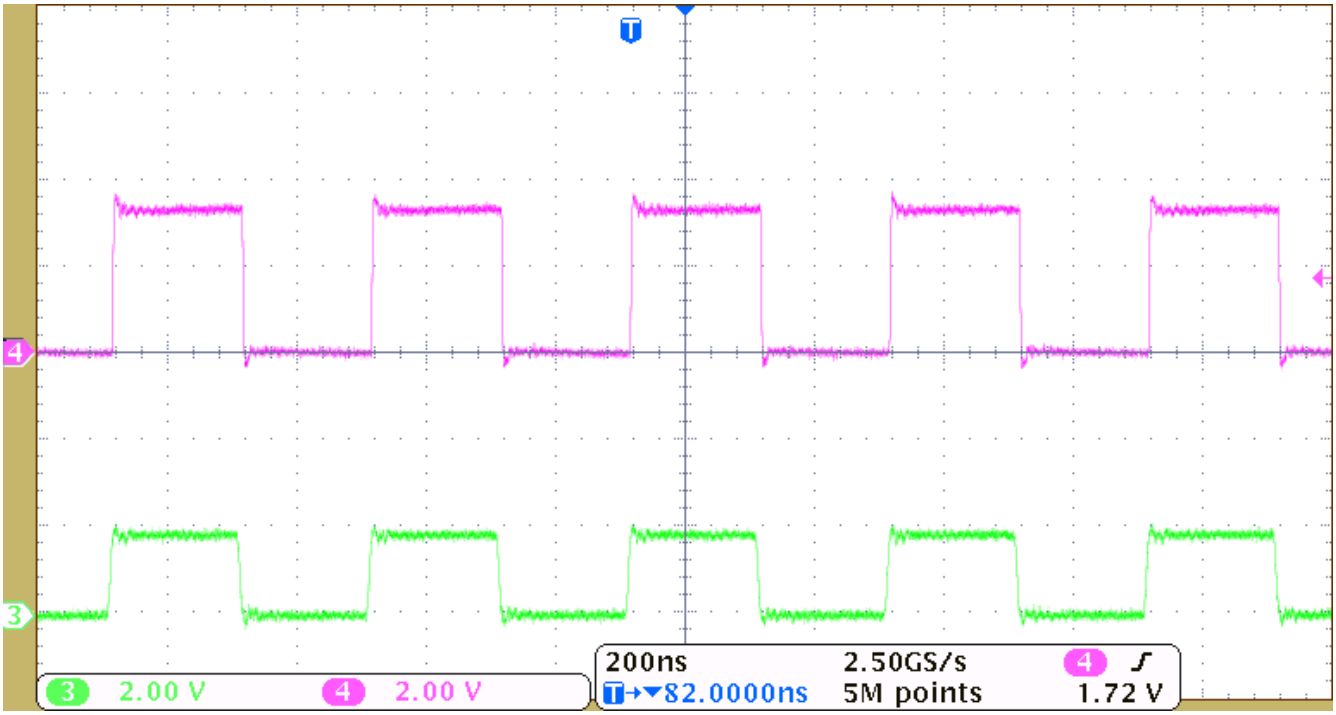

Figure 9-2. Level-Translation of a 2.5-MHz Signal

10 Power Supply Recommendations

During operation, ensure that $V_{CCA} \leq V_{CCB}$ at all times. During power-up sequencing, $V_{CCA} \geq V_{CCB}$ does not damage the device, so any power supply can be ramped up first. The TXB0108 has circuitry that disables all output ports when either VCC is switched off ($V_{CCA/B}$ = 0 V).

The output-enable (OE) input circuit is designed so that it is supplied by V_{CCA} and when the (OE) input is low, all outputs are placed in the high-impedance state. To ensure the high-impedance state of the outputs during power-up or power-down, the OE input pin must be tied to GND through a pulldown resistor and must not be enabled until V_{CCA} and V_{CCB} are fully ramped and stable. The minimum value of the pulldown resistor to ground is determined by the current-sourcing capability of the driver.

11 Layout

11.1 Layout Guidelines

To ensure reliability of the device, the following common printed-circuit board layout guidelines is recommended.

- Bypass capacitors should be used on power supplies and should be placed as close as possible to the V_{CCA}, V_{CCB} pin and GND pin.
- Short trace lengths should be used to avoid excessive loading.
- PCB signal trace-lengths must be kept short enough so that the round-trip delay of any reflection is less than the one-shot duration, approximately 10 ns, ensuring that any reflection encounters low impedance at the source driver.

12 Device and Documentation Support

12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.2 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

12.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

12.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

12.5 Glossary

TI Glossary	This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES “AS IS” AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI’s products are provided subject to TI’s Terms of Sale or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI’s provision of these resources does not expand or otherwise alter TI’s applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
