

## Digitally Controlled Potentiometer (XDCP™)

The Intersil ISL90462 is a digitally controlled potentiometer (XDCP). Configured as a variable resistor, the device consists of a resistor array, wiper switches, a control section, and volatile memory. The wiper position is controlled by a 2-pin Up /Down interface.

The potentiometer is implemented by a resistor array composed of 31 resistive elements and a wiper switching network. Between each element and at either end are tap points accessible to the wiper terminal. The position of the wiper element is controlled by the CS and U/D inputs.

The device can be used in a wide variety of applications including:

- LCD contrast control
- Parameter and bias adjustments
- Industrial and Automotive Control
- Transducer adjustment of pressure, temperature, position, chemical, and optical sensors
- Laser Diode driver biasing
- Gain control and offset adjustment

## Ordering Information

PART NUMBER	RTOTAL	PACKAGE	TEMP RANGE (°C)
ISL90462TIE627	100K	SC70	-40 to +85
ISL90462TIE627Z (See Note)	100K	SC70 (Pb-free)	-40 to +85
ISL90462UIE627	50K	SC70	-40 to +85
ISL90462UIE627Z (See Note)	50K	SC70 (Pb-free)	-40 to +85
ISL90462WIE627	10K	SC70	-40 to +85
ISL90462WIE627Z (See Note)	10K	SC70 (Pb-free)	-40 to +85
ISL90462TIH627	100K	SOT-23	-40 to +85
ISL90462TIH627Z (See Note)	100K	SOT-23 (Pb-free)	-40 to +85
ISL90462UIH627	50K	SOT-23	-40 to +85
ISL90462UIH627Z (See Note)	50K	SOT-23 (Pb-free)	-40 to +85
ISL90462WIH627	10K	SOT-23	-40 to +85
ISL90462WIH627Z (See Note)	10K	SOT-23 (Pb-free)	-40 to +85

Add "-TK" suffix for tape and reel.

NOTE: Intersil Pb-free plus anneal products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate termination finish, which are RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020

## Features

- Volatile Solid-State Potentiometer
- 2-pin UP/DN Interface
- DCP Terminal Voltage, 2.7V to 5.5V
- Tempco 35ppm/°C Typical
- 32 Wiper Tap Points
- Low Power CMOS
  - Active current, 25µA max.
  - Supply current 0.3µA
- Available R<sub>TOTAL</sub> Values = 10kΩ, 50kΩ, 100kΩ
- Temperature Range -40°C to +85°C
- Packages
  - 6 lead SC70, SOT23
- Pb-Free Plus Anneal Available (RoHS Compliant)

## Pin Descriptions

6-PIN	SYMBOL	DESCRIPTION
1	VDD	Supply voltage
2	GND	Ground/Low terminal
3	$U/\bar{D}$	Up - Down
4	CS	Chip select
5	RW	Wiper terminal
6	RH	High terminal

**Absolute Maximum Ratings**

Storage temperature ..... -65°C to +150°C  
 Voltage on  $\overline{CS}$ ,  $\overline{U/D}$  and  $V_{CC}$  with respect to GND ..... -1V to +7V  
 Lead temperature (soldering 10s) ..... 300°C  
 $I_W$  (10s) .....  $\pm 6$ mA  
 Power rating ..... 1mW

**Recommended Operating Conditions**

Temperature Range (Industrial) ..... -40°C to 85°C  
 $V_{CC}$  ..... 2.7V to 5.5V

*CAUTION: Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only; functional operation of the device (at these or any other conditions above those listed in the operational sections of this specification) is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.*

**Potentiometer Specifications** Over recommended operating conditions unless otherwise stated.

SYMBOL	PARAMETER	TEST CONDITIONS	MIN	TYP (Note 4)	MAX	UNIT
$R_{TOT}$	End to end resistance	W version	8	10	12	k $\Omega$
		U version	40	50	60	k $\Omega$
		T version	80	100	120	k $\Omega$
$V_R$	R <sub>H</sub> , R <sub>L</sub> terminal voltages		0		$V_{CC}$	V
	Noise	Ref: 1kHz		-120		dBV
R <sub>W</sub>	Wiper Resistance			600		$\Omega$
$I_W$	Wiper Current				0.6	mA
	Resolution		32			Taps
	Absolute linearity (Note 1)	$R_{H(n)(actual)} - R_{H(n)(expected)}$			$\pm 1$	MI (Note 3)
	Relative linearity (Note 2)	$R_{H(n+1)} - [R_{H(n)} + MI]$			$\pm 0.5$	MI (Note 3)
	$R_{TOTAL}$ temperature coefficient			$\pm 35$		ppm/°C
$C_H/C_L/C_W$	Potentiometer capacitances	See circuit #3		10/10/25		pF

NOTES:

- Absolute linearity is utilized to determine actual wiper voltage versus expected voltage =  $(R_{H(n)(actual)} - R_{H(n)(expected)}) = \pm 1$  MI Maximum. n = 1 .. 29 only
- Relative linearity is a measure of the error in step size between taps =  $R_{H(n+1)} - [R_{H(n)} + MI] = \pm 0.5$  MI, n = 1 .. 29 only.
- 1 MI = Minimum Increment =  $R_{TOT}/31$ .
- Typical values are for  $T_A = 25^\circ\text{C}$  and nominal supply voltage.

**DC Electrical Specifications** Over recommended operating conditions unless otherwise specified.

## Pin Descriptions

### **RH and RW**

The ISL90462 contains a digital potentiometer with one terminal tied to the ground pin (GND) of the device. The RH pin is the other potentiometer terminal, and the RW pin is the wiper terminal. The position of the wiper is controlled by the CS- and U/D- inputs, with a movement "up" connecting the wiper closer to the RH pin, and movement "down" connection the wiper closer to the GND pin.

### **Up/Down ( $\overline{U/D}$ )**

The  $\overline{U/D}$  input controls the direction of the wiper movement and whether the counter is incremented or decremented.

### **Chip Select ( $\overline{CS}$ )**

The device is selected when the  $\overline{CS}$  input is LOW. The current counter value is stored in volatile memory when  $\overline{CS}$  is returned HIGH. When  $\overline{CS}$  is high, the device is placed in low power standby mode.

## Principles of Operation

There are two sections of the ISL90462: the input control, counter and decode section; and the resistor array. The input control section operates just like an up/down counter. The output of this counter is decoded to turn on a single electronic switch connecting a point on the resistor array to the wiper output. The resistor array is comprised of 31 individual resistors connected in series. At either end of the array and between each resistor is an electronic switch that transfers the connection at that point to the wiper. The RH and RW terminals are uncommitted, and can for a variable voltage divider if RH is connected to a voltage source.

The wiper, when at either fixed terminal, acts like its mechanical equivalent and does not move beyond the last position. That is, the counter does not wrap around when clocked to either extreme.

If the wiper is moved several positions, multiple taps are connected to the wiper for  $t_{IW}$  ( $\overline{U/D}$  to RW change). The 2-terminal resistance value for the device can temporarily change by a significant amount if the wiper is moved several positions.
