

100 mA Constant-Current Linear LED Driver with Enable Input

Features

- 100 mA $\pm 5\%$ Constant-current Driver
- Built-in Reverse Polarity Protection
- Logic-level Enable
- Dimmable via $\overline{\text{EN}}$ Pin
- Overtemperature Protection
- 90V Maximum Rating for Transient Immunity

Applications

- Flashlights
- Specialty Lighting
- Low-voltage Signage
- Low-voltage Lighting

General Description

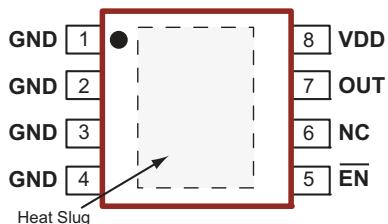

The CL7 is a fixed-current linear regulator designed for driving high-brightness LEDs at 100 mA from nominal 12V, 24V and 48V power supplies. With a maximum rating of 90V, it is able to withstand transients without the need for additional transient protection circuitry. The CL7 is offered in the 8-lead SOIC (with heat slug) package.

An active-low enable input ($\overline{\text{EN}}$) allows logic-level control of the LED for on/off control or PWM dimming. The enable input has 100 k Ω pull-down resistance. For applications not needing an enable input, refer to the CL6 data sheet.

Overtemperature protection circuitry shuts down all three channels when the nominal die temperature reaches 135°C. Normal operation resumes when the die temperature falls below 105 °C.

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings†

Supply Voltage, V_{DD}	-25V to +100V
Output Voltage, V_{OUT}	-25V to +100V
Enable Voltage, V_{EN}	-0.5V to +6.5V
Minimum Operating Junction Temperature, T_J (Note 1)	-40°C
Storage Temperature, T_S	-65°C to +150°C

† Notice: Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability.

Note 1: Maximum junction temperature internally limited

2.0 PIN DESCRIPTION

The details on the pins of CL7 are listed on [Table 2-1](#).

Refer to [Package Type](#) for the location of pins.

TABLE 2-1: PIN FUNCTION TABLE

Pin Number	Pin Name	Description
1, 2, 3, 4	GND	Circuit common
5	\overline{EN}	Active-low enable input. This input has an internal 100 k Ω pull-down resistance.
6	NC	No connection
7	OUT	Connect the LED between this pin and the supply voltage.
8	V _{DD}	Supply voltage for the CL7

4.0 PACKAGING INFORMATION

4.1 Package Marking Information

8-lead SOIC

Example

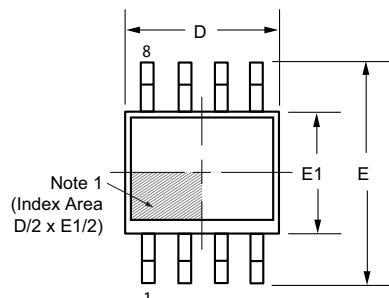

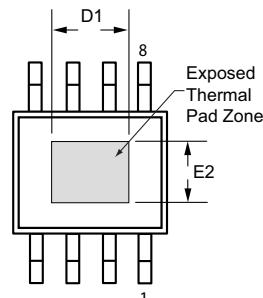

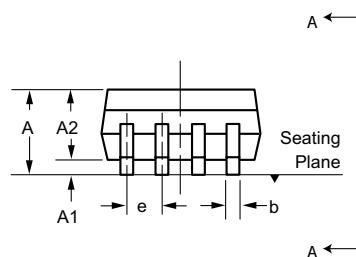

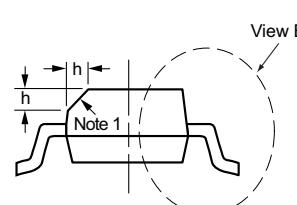

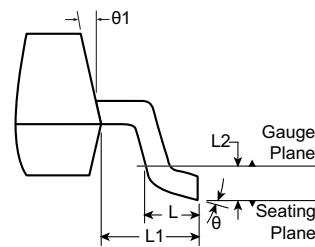

Legend:	XX...X Product Code or Customer-specific information
Y	Year code (last digit of calendar year)
YY	Year code (last 2 digits of calendar year)
WW	Week code (week of January 1 is week '01')
NNN	Alphanumeric traceability code
(e3)	Pb-free JEDEC® designator for Matte Tin (Sn)
*	This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.

Note: In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for product code or customer-specific information. Package may or not include the corporate logo.

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
