Serial to Fiber Optic Converters

Features

- Convert serial signals to single-mode or multi-mode fiber optic
- Data rate: up to 115.2 kbps
- 2 kV isolation protection on 2 or 3 lines (by model)
- Extend serial signals up to 15 km distance (by model)
- EMI/RFI protection – inherent to fiber optic communications
- Wide operating temperature range
- Modbus ASCII/RTU compatible
- External PSU required (not included, sold separately)
- DIN rail and panel mount options (by model)
- Industrial ratings (UL C1/D2, UL 508, IEC-61850-3, IEEE-1613) (by model)

Introduction

Advantech serial-to-fiber converters provide data signal extension, isolation plus fiber optic's inherent EMI/RFI immunity. Converters support point-to-point plus multi-drop allowing one serial device to communicate with up to 31 other devices in a fiber optic ring. ULI-21xCx models use Automatic Send Data Control circuitry for RS-422/485 driver control, eliminating software. A DIP switch sets RS-422/485 parameters; terminal blocks connect serial signals and power. ULI-21xE models use bit-wise enabled circuitry that automatically detects data rates without a DIP switch and also meet electrical substation requirements.
