**SAME54 Curiosity Ultra Users Guide DM320210**

---

**Introduction**

---

The SAM E54 Curiosity Ultra Development Board (DM320210) includes an integrated programmer and debugger, hence additional hardware is not required to get started. Users can add functionality through MikroElektronika mikroBUS™ Click™ adapter boards, add Ethernet connectivity with the Microchip PHY Daughter Board, add Wi-Fi™ connectivity capability using the Microchip expansion boards, and add audio input and output capability with Microchip audio daughter boards.

With or without expansion boards, the SAM E54 Curiosity Ultra Development Board provides the freedom to develop for a variety of applications, including Bluetooth® Audio, CAN, Graphics User Interface (GUI), Internet of Things (IoT), robotics development, and proof-of-concept (PoC) designs.

## Features

The following are features of the SAM E54 Curiosity Ultra development board

- ATSAME54P20A, 120 MHz, 1MB Flash, 256 KB RAM
- On-Board Debugger (EDBG)
  - Real time Programming and Debugging
  - Virtual COM port (VCOM)
  - Data Gateway Interface (DGI)
- One mikroBUS interfaces
- One X32 audio interfaces supporting Bluetooth and audio
- Ethernet interface
- Graphics interface
- Xplained Pro extension compatible interface
- CAN interface
- User buttons
- User LEDs
- 8-MB QSPI memory
- Arduino Uno R3 compatible interface

## Kit Contents

The development board kit contains one SAM E54 Curiosity Ultra development board (DM320210).

Note: If you are missing any part of the kit, contact a Microchip sales office for assistance. A list of Microchip offices for sales and service is provided on the last page of this document.

### 1. SAM E54 Curiosity Ultra Development Board Functionality and Features

The SAM E54 Curiosity Ultra development board features and functionalists are given in the following sections.

#### 1.1 SAM E54 Curiosity Ultra Development Board Features

Figure 1-1. SAM E54 Curiosity Ultra Development Board Layout (Top View)

Table 1-1. SAM E54 Curiosity Ultra Development Board Feature Descriptions

Number	Description of item
1	ATSAME54P20A
2	USB debugger interface
3	Xplained Pro expansion compatible interface

---

---

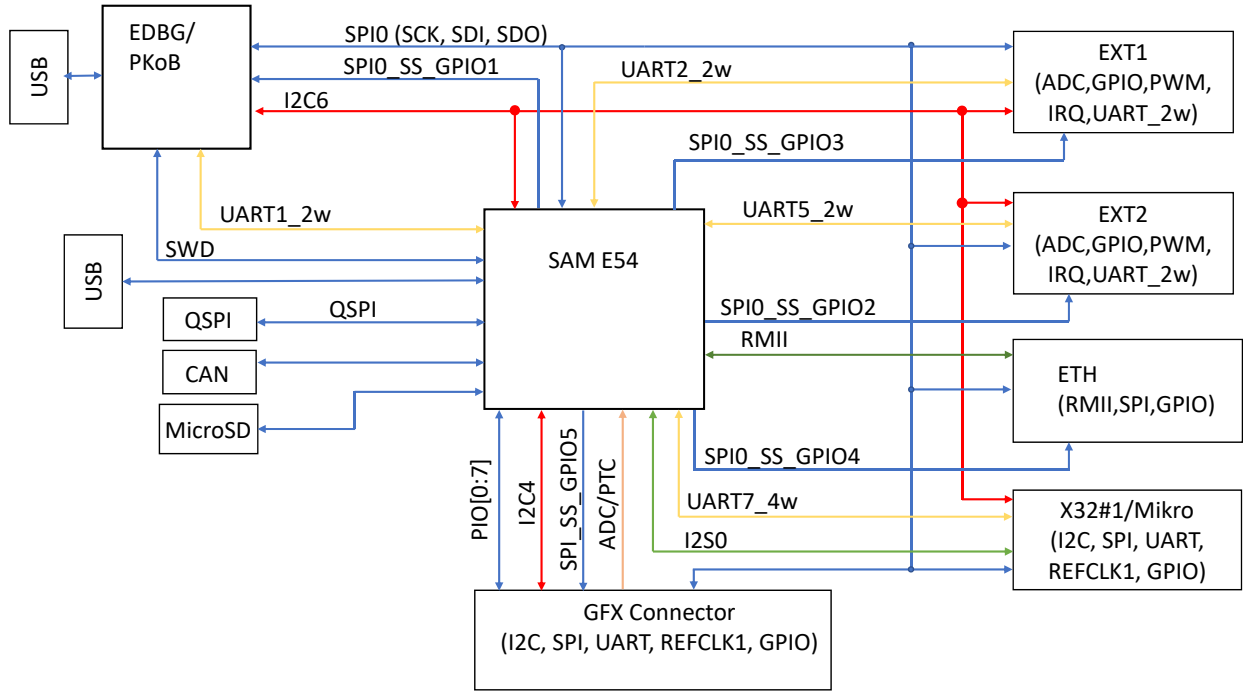

**.....continued**

<b>Number</b>	<b>Description of item</b>
4	Ethernet interface (RMII, SPI, GPIO).
5	X32 audio interface. 2 per board. Bluetooth & audio codecs sold separately
6	CAN interface
7	Graphics interface
8	DAC output
9	Audio reference clock select
10	I <sup>2</sup> C temp sensor (MCP9808)
11	ATECC508 (Not populated)
12	I <sup>2</sup> C Serial EEPROM with MAC address
13	2.1 mm barrel jack power input
14	Programmable user buttons and LEDs
15	USB to ATSAME54P20A
16	Quad SPI memory 256 Mb (8 MB)

## 1.2 System Block Diagram

The following figure illustrates the system block diagram, which indicates the data bus routing.

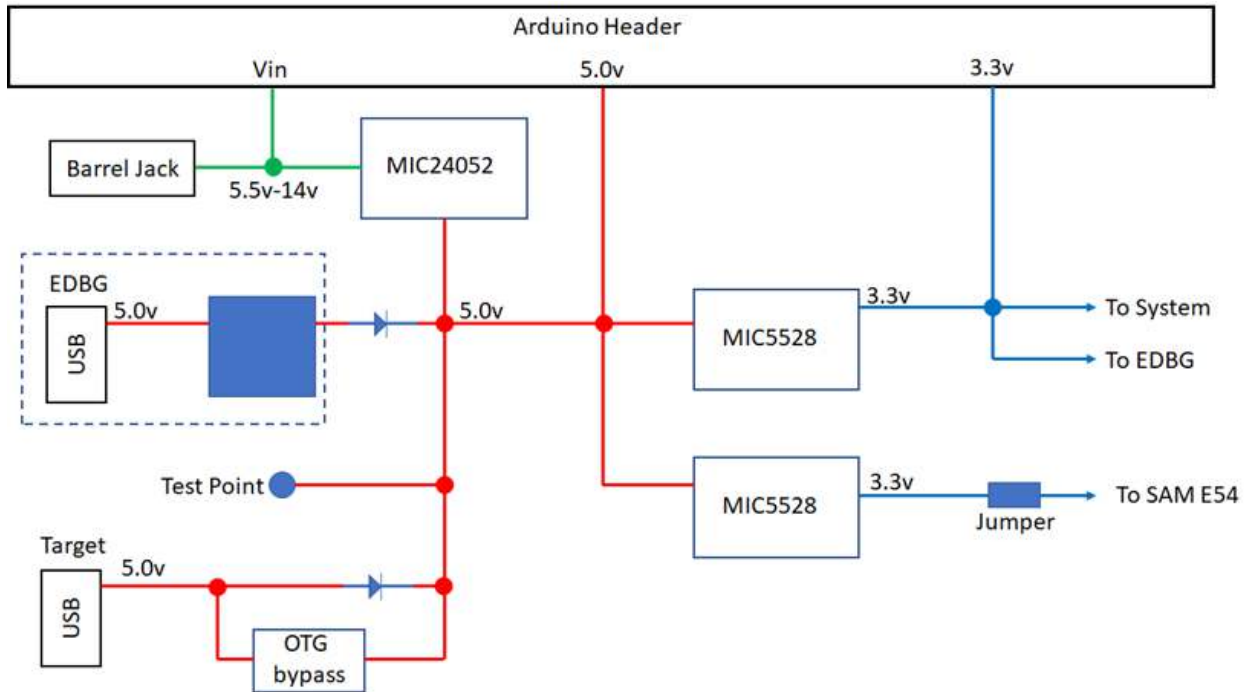

Figure 1-2. System Block Diagram

### 1.3 Power Block Diagram

The following diagram shows the power system on the SAM E54 Curiosity Ultra development board. The development board has many power sub systems that allow it to accept up to 16V. The barrel jack is a 2.1 mm center positive connector. The power in can also be connected through the Arduino header (Vin), and it supplies power before the reverse voltage protection.

Figure 1-3. Power Block Diagram

## 1.4 EDBG

The SAM E54 Curiosity Ultra development board implements several Curiosity Pro standards, such as extension headers and connectors. Curiosity Pro is an evaluation platform that provides a full Microchip microcontroller experience. The platform consists of a series of Microcontroller (MCU) boards and extension boards that are integrated with the Microchip MPLAB<sup>®</sup> X IDE that supports data streaming. The Curiosity Pro MCU boards support a wide range of Curiosity Pro extension boards, such as audio DACs and codecs, Ethernet PHYs, graphics cards, and mikroBUS that are connected through a set of standardized headers and connectors. Each extension board has an identification (ID) chip to uniquely identify which boards are connected to a Xplained Pro MCU board. This information is given in the relevant user guides, application notes, data sheets, and the example code examples through the MPLAB X IDE.

The development board contains a Microchip Embedded Debugger (EDBG) for on-board debugging. The EDBG is a complex USB device, which is based on the following interfaces:

- Debugger
- Virtual COM Port
- Data Gateway Interface (DGI)

Together with the Microchip MPLAB X IDE, the EDBG debugger interface can program and debug the ATSAME54P20A. On the development board, the SWD interface is connected between the EDBG and the ATSAME54P20A.

The Virtual COM Port is connected to a UART on the ATSAME54P20A and provides an easy way to communicate with the target application through the terminal software. It offers variable baud rate, parity, and Stop bit settings. The settings on the ATSAME54P20A must match with the settings given in the terminal software.

**Note:** If not set automatically, Data Terminal Ready (DTR) must be set in the terminal software.

The DGI consists of several physical interfaces for communication with the host computer. Communication over the interfaces is bidirectional. It can be used to send events and values from the ATSAME54P20A, or as a generic printf-style data channel. Traffic over the interfaces can be timestamped on the EDBG for accurate tracing of events. Note that timestamping imposes an overhead that reduces maximal throughput. The Data Visualizer is used to send and receive data through DGI.

The EDBG controls two LEDs on the development board: a power LED and a status LED. The table below provides how the LEDs are controlled in different operation modes.

**Table 1-2. EDBG LED Control**

Operation Mode	Power LED	Status LED
Normal operation	The power LED is lit when power is applied to the board.	Activity indicator, LED flashes when any communication happens to the EDBG.
Bootloader mode (Idle mode)	The power LED and the status LED blinks simultaneously.	The power LED and the status LED blinks simultaneously.
Bootloader mode (firmware upgrade)	The power LED and the status LED blinks in an alternating pattern.	The power LED and the status LED blinks in an alternating pattern.

For additional information on EDBG, refer to the [EDBG User Guide](#).

### Hardware Identification System

All Curiosity Pro-compatible extension boards have an Microchip ATSHA204 CryptoAuthentication™ chip mounted. This chip contains information that identifies the extension with its name and data. When an Xplained Pro extension is connected to a Curiosity Pro MCU board, the information is read and sent to the MPLAB X IDE. The Microchip kits extension, installed with MPLAB X IDE, provides relevant information, such as code examples, and links to relevant documents. The following table provides the data fields stored in the ID chip with content examples.

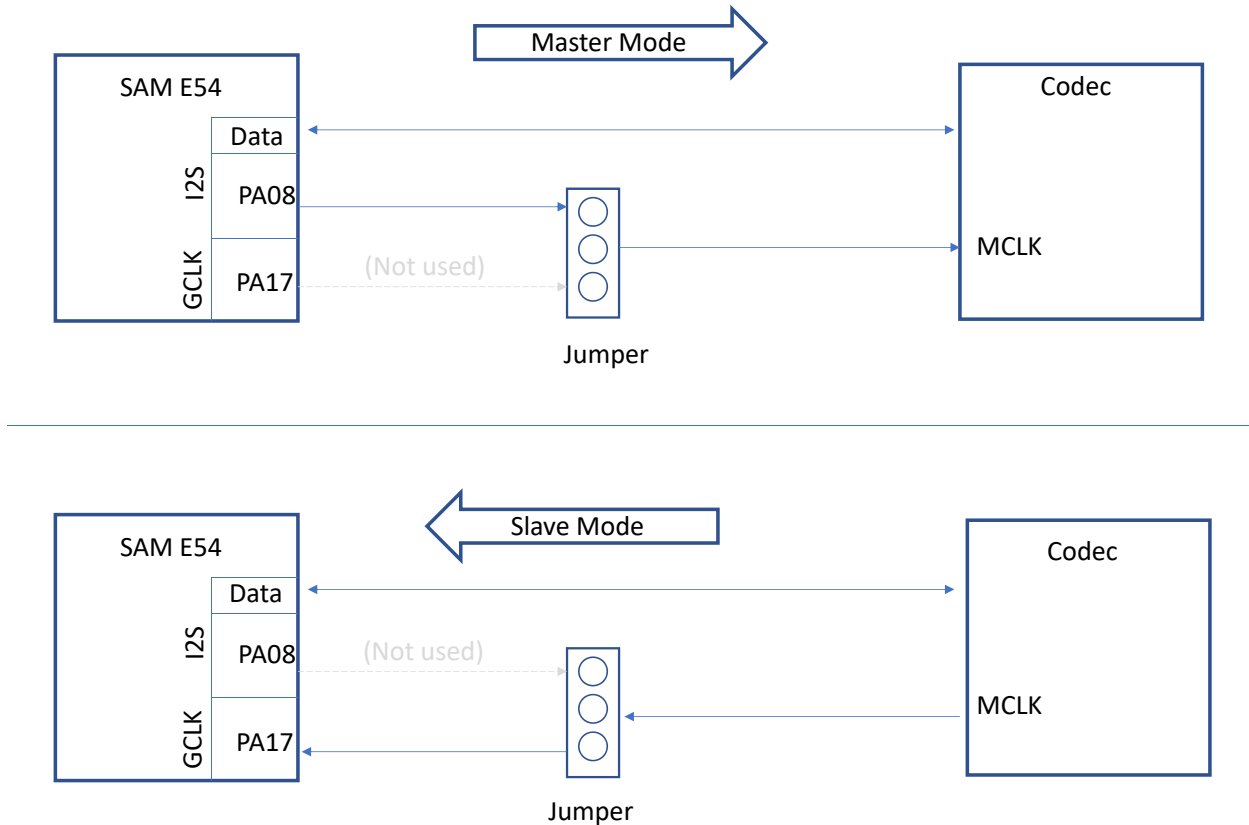

Table 1-3. Xplained Pro ID Chip Content Example

Data Field	Data Type	Example
Manufacture	ASCII string	Microchip\0'
Product Name	ASCII string	-
Product Revision	ASCII string	04\0'
Product Serial number	ASCII string	1774020200000010\0'
Minimum Voltage (mV)	uint16_t	3000
Maximum Voltage (mV)	uint16_t	3600
Maximum Current (mA)	uint16_t	30

### 1.5 Audio Clock Selection

The SAM E54 has two ways of supporting I<sup>2</sup>S audio applications: Host mode and Slave mode. This refers to which mode generates the I<sup>2</sup>S Master clock, and it also known as a reference clock. The following figure shows the relationship between the devices. On this board there is a jumper to select between the two modes, Master mode and Slave mode. The usable modes also depend on which codec it supports, as not all codecs can support both the modes.

Figure 1-4. Audio Clock Selection

#### 1.5.1 Pinout

The following table describes the pinout for the X32 Audio Interface. See the [2.1 Schematics](#) for more information.

Table 1-4. Pinout

Pin Number	Name	Description	Interface
1	GND	Ground	Power
2	GND	Ground	Power
3	UART RX	UART RX, receive to MCU from DB	UART
4	UART CTS	UART Clear to send	UART
5	UART TX	UART TX, transmit from MCU to DB	UART
6	UART RTS	UART Ready to send	UART
7	I <sup>2</sup> C SCL	Clock line for I <sup>2</sup> C interface.	I <sup>2</sup> C
8	STBY/RST	Standby/Reset control	GPIO

.....continued

Pin Number	Name	Description	Interface
9	I <sup>2</sup> C SDA	Data line for I <sup>2</sup> C interface.	I <sup>2</sup> C
10	Audio WS/LRCLK	Audio Word Select/Left Right Clock	I <sup>2</sup> S
11	Audio In	Audio into MCU, out from codac	I <sup>2</sup> S
12	Audio CLK	Audio clock	I <sup>2</sup> S
13	Audio out	Audio out of MCU, into codac/DAC	I <sup>2</sup> S
14	REFCLK/MCK	Reference clock #1	REFCLK
15	GND	Ground	Power
16	GND	Ground	Power
17	NC	Legacy hold over	-
18	+3.3v	VDD	Power
19	NC	Legacy hold over	-
20	+5.0v	VDD	Power
21 (1)	NC	NC	
22 (2)	ADC/Card ID pin	Analog-to-Digital Converter to read voltage on the daughter card	1-wire
23 (3)	NC	NC	
24 (4)	NC	NC	
25 (5)	NC	NC	
26 (6)	NC	NC	
27 (7)	NC	NC	
28 (8)	NC	NC	
29 (9)	NC	NC	
30 (10)	NC	NC	
31 (11)	GND	Ground	Power
32 (12)	GND	Ground	Power

### 1.5.2 X32 Port Connections

The following table provides the port and connection details of the X32 audio interface. The I<sup>2</sup>S signals listed are the Main signals, and both the signals are available at each interface.

**Table 1-5. X32 Port Connections**

Interface	X32
UART RX	PC13
UART TX	PC12
UART RTS	PC14
UART CTS	PC15
I <sup>2</sup> C SDA	PD09
I <sup>2</sup> C SCL	PD08

.....continued	
Interface	X32
Reset	PC18
REFCLK	PA08/PA17 (refer to Figure 1-4 Audio Clock Selection)
I <sup>2</sup> S Clock	PA10
I <sup>2</sup> S Audio Out (MOSI)	PA11
I <sup>2</sup> S Audio In (MISO)	PB10
I <sup>2</sup> S LRCLK	PA09

### 1.6 mikroBUS

The mikroBUS interface enables using additional click boards. For more information, and to see the boards that can be used with this development board follow the link: <https://www.mikroe.com/>.

**Note:** Some of these pins are shared with the X32 audio interface. Due to location, an X32 audio card cannot be used simultaneously as the click interface due to mechanical interference.

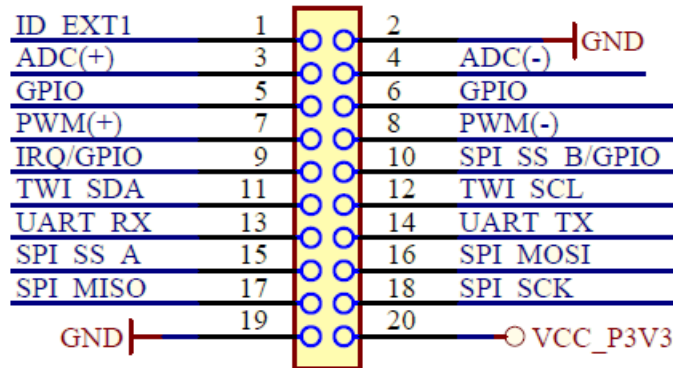

## 1.7 Xplained Pro Standard Extension Header

All Xplained Ultra and Curiosity Ultra Kits have many dual-row, 20-pin, and 100 mil extension headers. Xplained Ultra and Curiosity Ultra MCU boards have male headers, while Xplained Ultra extensions have their female counterparts as shown in the following figure.

**Note:** All pins are not always connected.

The extension headers can be used to connect a variety of Xplained Pro extensions to Xplained Ultra and Curiosity Ultra MCU boards, or to access the pins of the target MCU on Xplained Ultra MCU or Curiosity Ultra boards directly.

**Figure 1-5. Extension Headers**

All connected pins follow the defined pinout description as shown in the following table.

**Table 1-6. Xplained Pro Standard Extension Header**

Pin number	Name	Description
1	ID	Communication line to the ID chip on an extension board
2	GND	Ground
3	ADC(+)	Analog-to-Digital Converter (ADC), alternatively positive part of differential ADC
4	ADC(-)	Analog-to-Digital Converter (ADC), alternatively negative part of differential ADC
5	GPIO1	General purpose I/O
6	GPIO2	General purpose I/O
7	PWM(+)	Pulse-Width Modulation (PWM), alternatively positive part of differential PWM
8	PWM(-)	Pulse-Width Modulation (PWM), alternatively negative part of differential PWM
9	IRQ/INT/GPIO	Interrupt request line and general purpose I/O
10	SPI SS B/GPIO	SPI Slave Select or general purpose I/O
11	I <sup>2</sup> C SDA	Data line for I <sup>2</sup> C interface. Always implemented, bus type
12	I <sup>2</sup> C SCL	Clock line for I <sup>2</sup> C interface. Always implemented, bus type
13	UART RX	Receiver line of target device UART
14	UART TX	Transmitter line of target device UART
15	SPI SS A/GPIO	SPI Slave Select or general purpose I/O
16	SPI MOSI	<b>Master Out Slave In</b> line of serial peripheral interface. Always implemented, bus type.
17	SPI MISO	<b>Master In Slave Out</b> line of serial peripheral interface. Always implemented, bus type.

.....continued

Pin number	Name	Description
18	SPI SCK	Clock for serial peripheral interface. Always implemented, bus type.
19	GND	Ground
20	V <sub>CC</sub>	Power for extension boards (3.3V)

## 1.8 Graphics Connectors or GFX Card Interface

The SAM E54 Curiosity Ultra development kit is designed to have a modular graphics interface. This interface enables the use of several different graphics cards, which allows for expandability and different use cases. A 24-bit pass through card is included with the kit, this board passes parallel data through, and can be configured to an 8-bit 8080 MCU mode. This card also provides access to the ADC for resistive touch screen or self-drive PTC touch screens. Refer to the following table for the pin description.

**Table 1-7. Graphics Interface Pinout**

Pin Number	Name	Description
1	GND	Ground
2	GND	Ground
3	$\overline{\text{MCLR}}$	Master Clear Reset controlled by the debuggers. Allows for a complete system reboot.
4	IRQ1 (LCD Touch)	Interrupt request line for cap touch device
5	5.0V V <sub>CC</sub>	5.0V
6	IRQ2 (Q Touch)	Interrupt request line for Q touch devices
7	LCDEN	LCD Data Enable
8	IRQ3 (Display Controllers)	Interrupt request line for external display controllers
9	LCDHSYNC/NCS3	LCD Horizontal Sync or GPIO
10	IRQ4 (Resistive touch)	Interrupt request line for resistive touch controllers
11	LCDVSYNC/nWE	LCD Vertical Sync, CS, or GPIO
12	5.0v V <sub>CC</sub>	+5.0v
13	LCDPCK/nRD	LCD pixel clock, Write Enable or GPIO
14	I <sup>2</sup> C SDA	Data line for I <sup>2</sup> C interface. Always implemented, bus type.
15	LCD D0	LCD Data bit 0
16	I <sup>2</sup> C SCL	Clock line for I <sup>2</sup> C interface. Always implemented, bus type.
17	LCD D1	LCD Data bit 1
18	SPI SCK	Clock for serial peripheral interface. Always implemented, bus type.
19	LCD D2	LCD Data bit 2
20	SPI MOSI	<b>Master Out Slave In</b> line of serial peripheral interface.
21	LCD D3	LCD Data bit 3
22	SPI MISO	<b>Master In Slave Out</b> line of serial peripheral interface.
23	LCD D4	LCD Data bit 4

.....continued		
Pin Number	Name	Description
24	SPI SS	SPI Slave Select
25	LCD D5	LCD Data bit 5
26	UART RX	Receiver line of target device UART
27	LCD D6	LCD Data bit 6
28	UART TX	Transmitter line of target device UART. (from MCU to GFX card)
29	LCD D7	LCD Data bit 7
30	UART RTS	UART Ready-To-Send (from MCU to GFX card)
31	LCD D8	No Connect
32	UART CTS	UART Clear-To-Send (from MCU to GFX card)
33	LCD D9	No Connect
34	LCD PWM	LCD PWM back light control
35	LCD D10	No Connect
36	PWM2	Pulse-Width Modulation (PWM)
37	LCD D11	No Connect
38	GPIO1	General purpose I/O
39	LCD D12	No Connect
40	GPIO2	General purpose I/O
41	LCD D13	No Connect
42	GPIO3	General purpose I/O
43	LCD D14	No Connect
44	STBY/RST/GPIO4	Standby/Reset or general purpose I/O. For resetting devices attached to the GFX connector.
45	LCD D15	No Connect
46	STBY/RST/GPIO5	Standby2/Reset2 or general purpose I/O
47	LCD D16	No Connect
48	ID pin	Communication line to the ID chip on an extension board
49	LCD D17	No Connect
50	ADC 0	Analog-to-Digital Converter to MCU
51	LCD D18	No Connect
52	ADC1	Analog-to-Digital Converter to MCU
53	LCD D19	No Connect
54	ADC2	Analog-to-Digital Converter to MCU
55	LCD D20	No Connect
56	ADC3	Analog-to-Digital Converter to MCU
57	LCD D21	No Connect

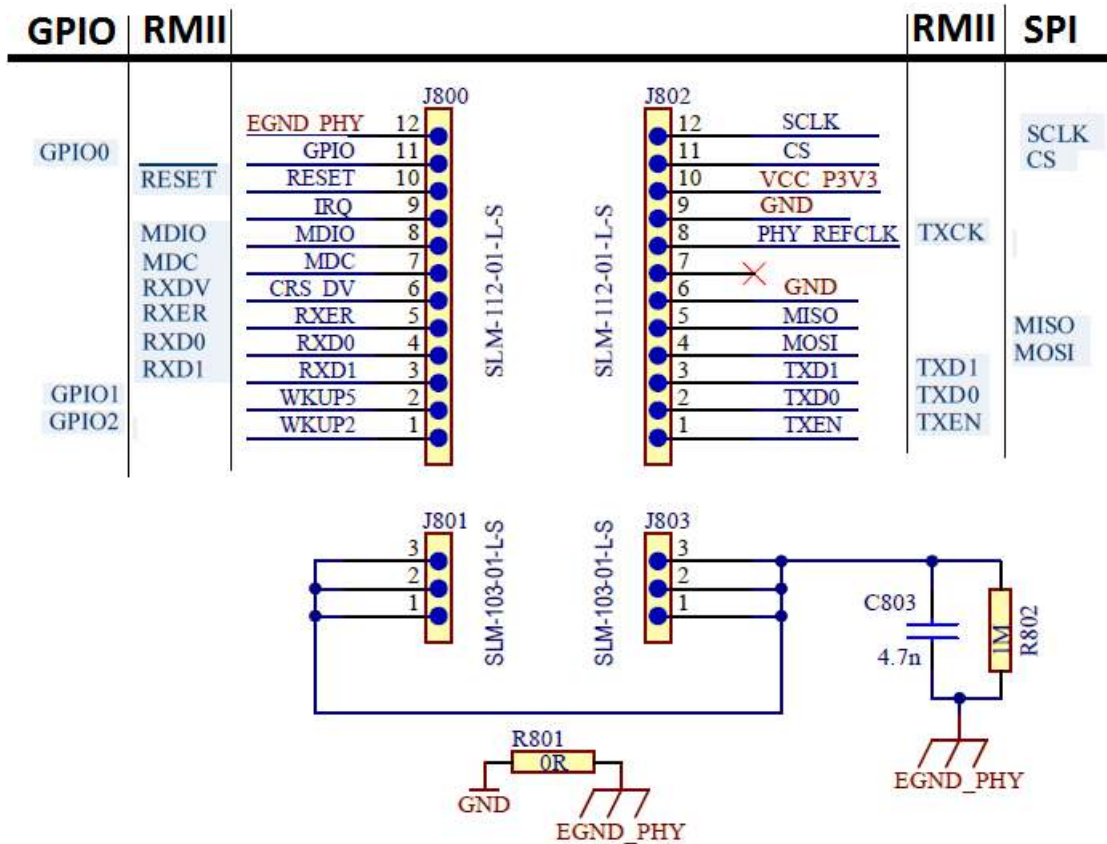

.....continued		
Pin Number	Name	Description
58	ADC4	Analog-to-Digital Converter to MCU
59	LCD D22	No Connect
60	ADC5	Analog-to-Digital Converter to MCU
61	LCD D23	No Connect
62	ADC6	Analog-to-Digital Converter to MCU
63	3.3V V <sub>CC</sub>	+3.3V V <sub>CC</sub>
64	ADC7	Analog-to-Digital Converter to MCU
65	GND	Ground
66	3.3V V <sub>CC</sub>	+3.3V V <sub>CC</sub>
67	GND	Ground
68	GND TAB	Mounting Tab
69	GND TAB	Mounting Tab

### 1.9 Ethernet

The SAM E54 Curiosity Ultra development kit has a modular Ethernet PHY system that enables different PHYs to be plugged into the board. This interface is setup to use a Reduced Media-Independent Interface (RMII) and a SPI bus interface with GPIO. The following figure illustrates the Ethernet PHY header configuration.

Figure 1-6. Ethernet PHY Header Configuration

The following table provides the Ethernet PHY interface pinout descriptions.

Table 1-8. Ethernet Interface Pinout Description

Pin Number	Name	Description
1	GPIO	General purpose I/O
2	GPIO	General purpose I/O
3	RXD1	Receive Data 1
4	RXD0	Receive Data 0
5	RXER	Receive Error
6	RXDV	Receive Data Valid
7	MDC	-
8	MDIO	-
9	IRQ	Interrupt request line
10	RESET	Reset control to the Ethernet PHY
11	GPIO	General purpose I/O
12	EGND	Shield Ground
13 (1)	TXEN	Transmit Enable
14 (2)	TXD0	Transmit Data

.....continued		
Pin Number	Name	Description
15 (3)	TDX1	Transmit Data
16 (4)	MOSI	Master Out Slave In line of serial peripheral interface
17 (5)	MISO	Master In Slave Out line of serial peripheral interface
18 (6)	GND	Ground
19 (7)	NC	No Connect
20 (8)	REFCLK (in)	Reference Clock input (50 MHz)
21 (9)	GND	GND
22 (10)	+3.3v V <sub>DD</sub>	+3.3V V <sub>DD</sub>
23 (11)	CS	Chip Select for serial peripheral interface
24 (12)	SCK	Clock for serial peripheral interface
25 -30	EGND	Shield Ground

### 1.10 AT24MAC402 Serial EEPROM

The development board has an on-board 2-Kbit I<sup>2</sup>C serial EEPROM which is available for user applications. This serial EEPROM has a unique EUI-48, and 128-bit serial number. The unique number can be seen in the Microchip MPLAB Kit window or Atmel Studio Xplained window after the kit has been plugged into the PC.

Users can change the device address using the solder pads on the board, but all address bits have been defaulted to one. Refer to [schematics](#) for additional information. For additional usage information of on this part, refer to the “AT24MAC402 and AT24MAC602 Data Sheet”, which is available for download from the Hardware Features, or from the following location: <http://ww1.microchip.com/downloads/en/DeviceDoc/Atmel-8807-SEEPROM-AT24MAC402-602-Datasheet.pdf>.

The following are default address for the device:

AT24MAC\_I2C\_EEPROM\_ADDR 0b1010110 //0x56 (7 bit)

AT24MAC\_I2C\_EXTENDED\_ADDR 0b1011110 //0x5E (7 bit)

### 1.11 On-Board External Temperature Sensor

This development kit has an on-board external I<sup>2</sup>C-based temperature sensor for application use. The external sensor is a MCP8908. The temperature sensor has a user programmable temperature alert output and a user programmable temperature limits with a typical accuracy of +/-0.25°C.

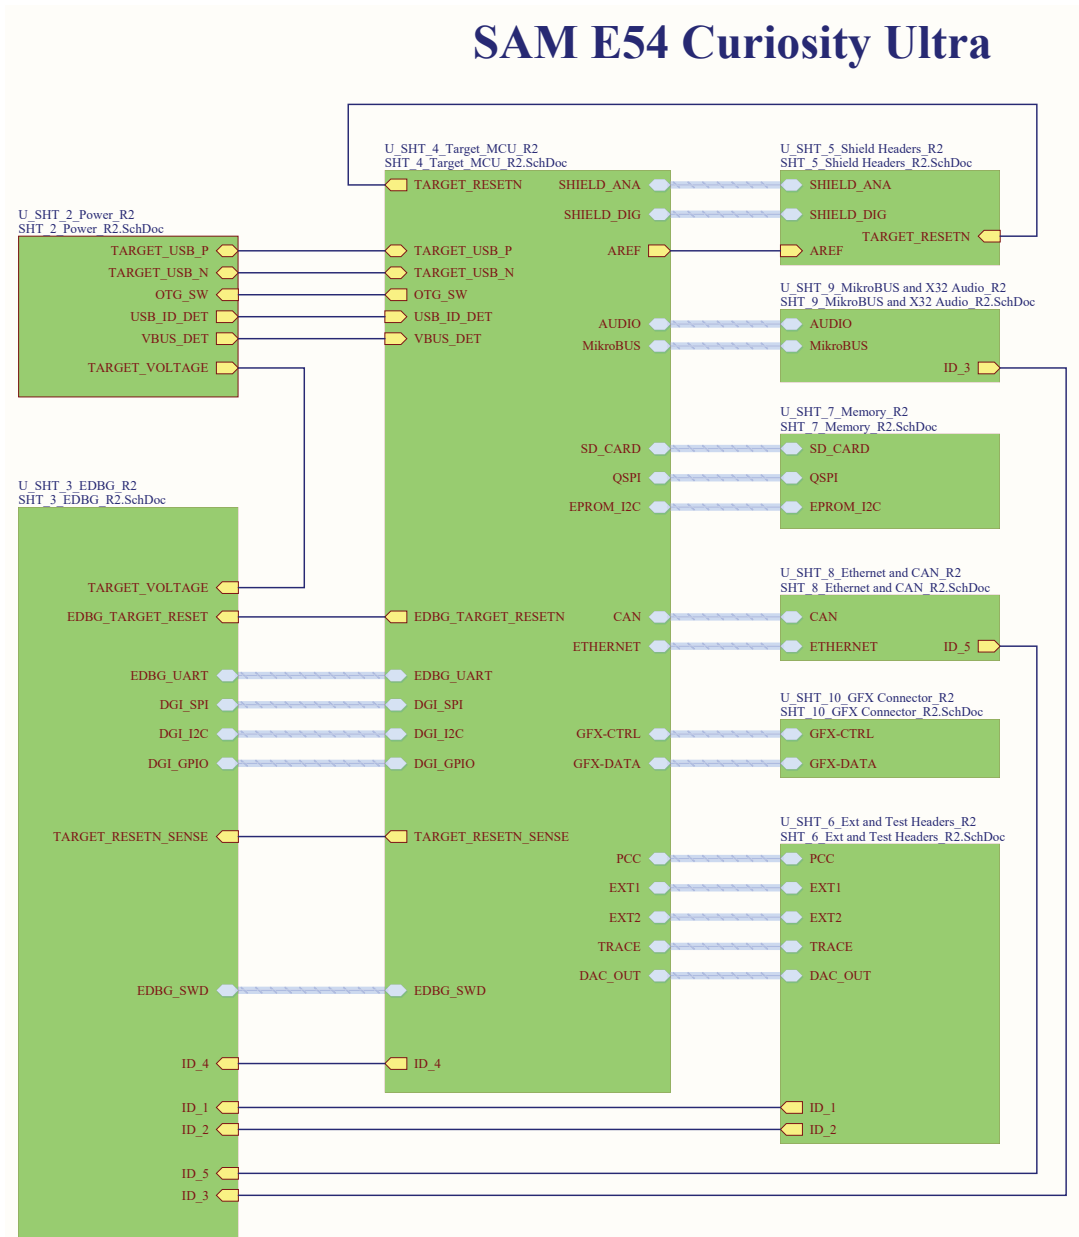

This part has an I<sup>2</sup>C address of 0x18h. For additional information, refer to the “±0.5°C Maximum Accuracy Digital Temperature Sensor” document, which is available for download from the following location: <http://ww1.microchip.com/downloads/en/DeviceDoc/25095A.pdf>.

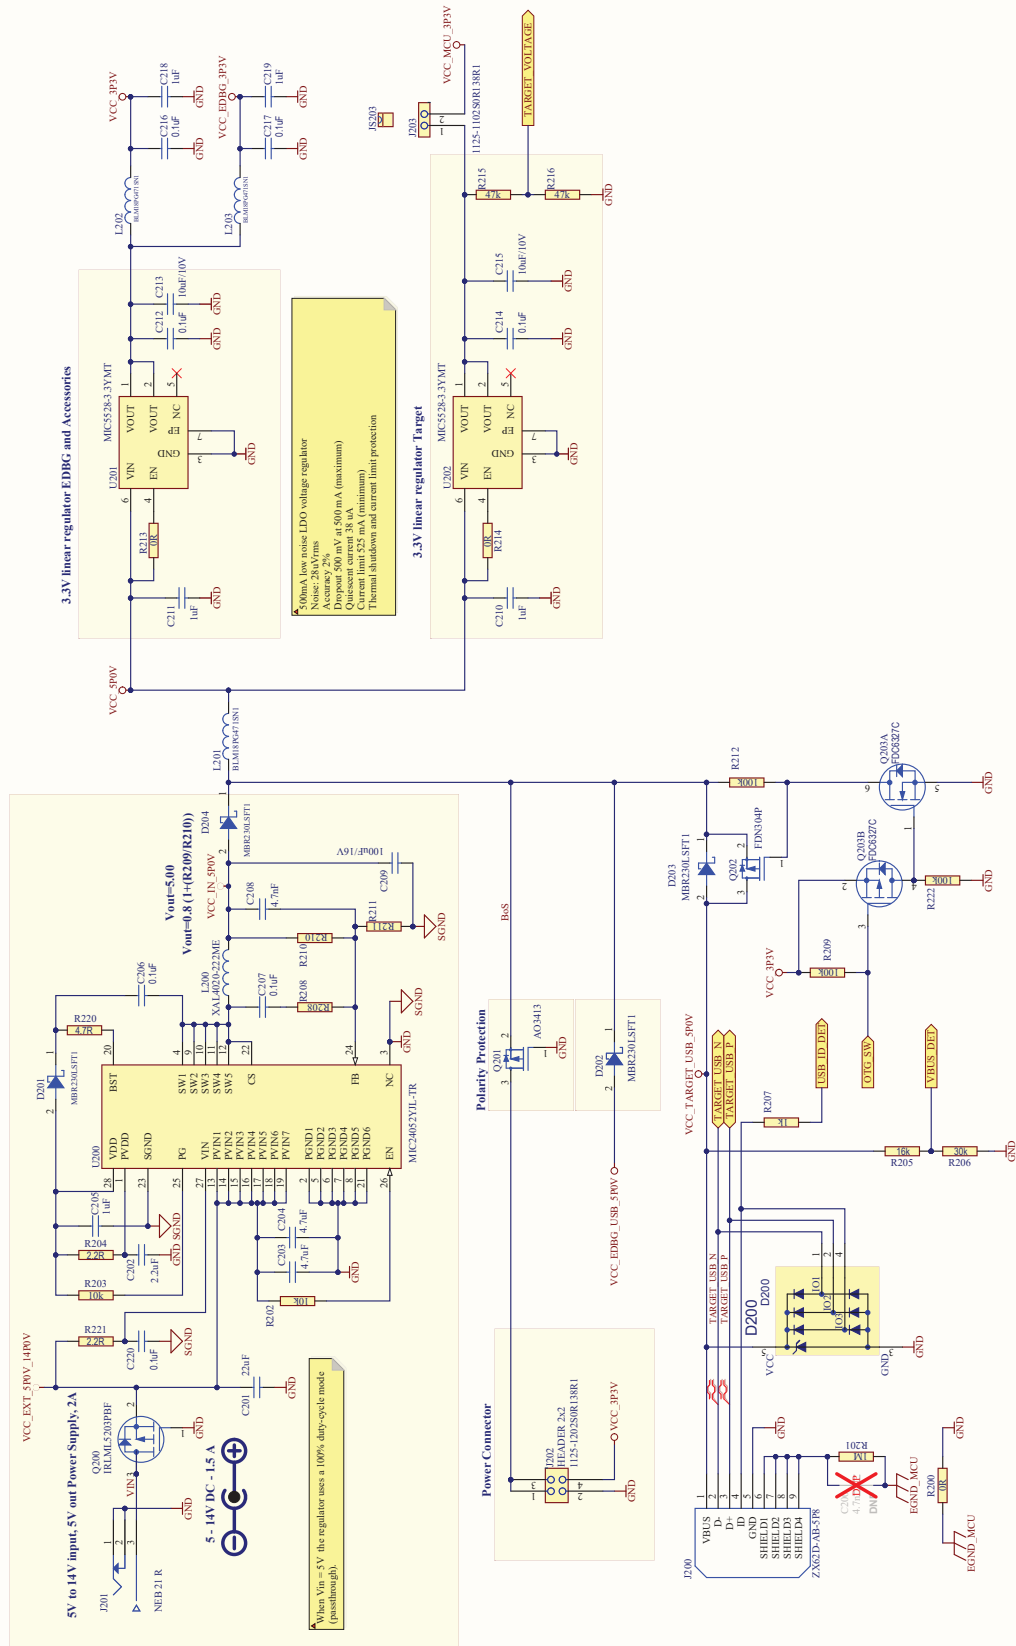

### 1.12 Hardware Features

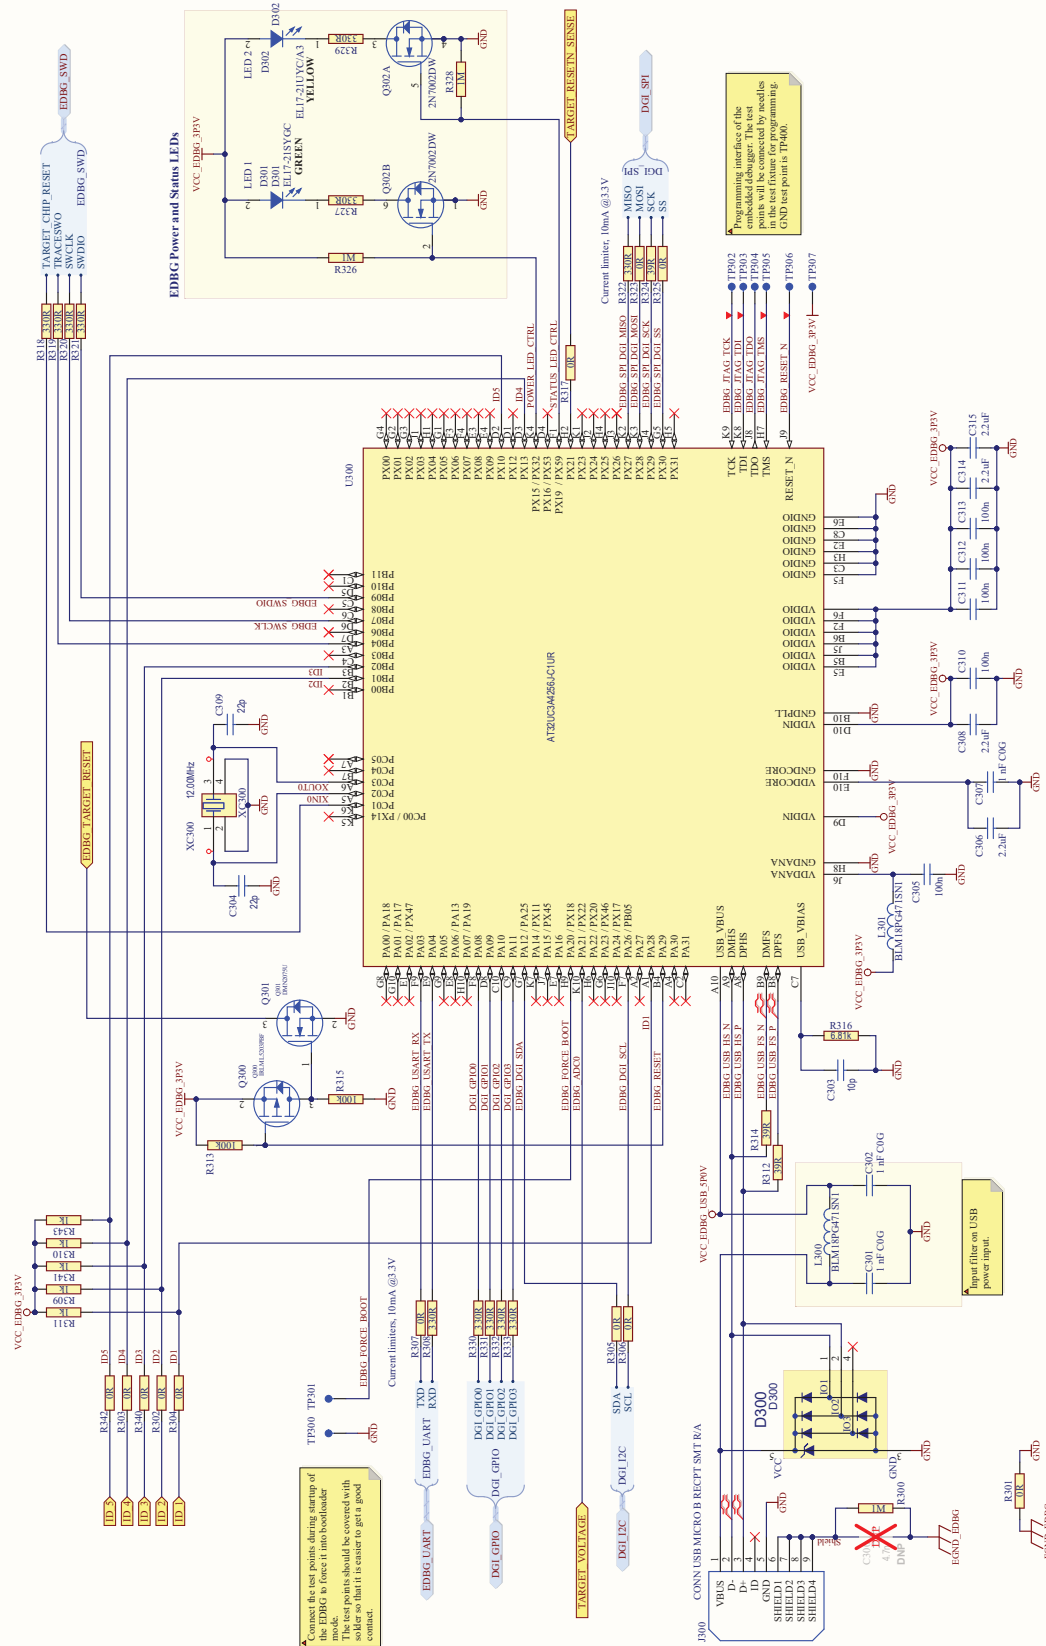

The starter kit provides the following two push button switches: User switch and Reset switch. The push button switches do not have any debounce circuitry and require the use of internal pull-up resistors. This enables the user to investigate the software debounce techniques. When Idle, the switches are pulled high (+3.3V,) and when pressed, they are grounded.

## The Microchip Website

---

Microchip provides online support via our website at <http://www.microchip.com/>. This website is used to make files and information easily available to customers. Some of the content available includes:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip design partner program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

## Product Change Notification Service

---

Microchip's product change notification service helps keep customers current on Microchip products. Subscribers will receive email notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, go to <http://www.microchip.com/pcn> and follow the registration instructions.

## Customer Support

---

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Embedded Solutions Engineer (ESE)
- Technical Support

Customers should contact their distributor, representative or ESE for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in this document.

Technical support is available through the web site at: <http://www.microchip.com/support>

## Product Identification System

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

Device:	Device A, Feature A, (Package A) Device B, Feature B, (Package B)	
Tape & Reel Option:	Blank	= Tube
	T	= Tape & Reel
Temperature Range:	I	= -40°C to +85°C (Industrial)
	E	= -40°C to +125°C (Extended)
Package:	AA	= Package AA
	BB	= Package BB

Examples:

- MCPXXXXXAT-E/AA: Tape and Reel, Extended temperature, XAA package
- MCPXXXXXBT-E/BB: Tape and Reel Extended temperature, XBB package

**Note:**

1. Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes and is not printed on the device package. Check with your Microchip Sales Office for package availability with the Tape and Reel option.
2. Small form-factor packaging options may be available. Please check <http://www.microchip.com/packaging> for small-form factor package availability, or contact your local Sales Office.

## Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

## Legal Notice

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER

## **Trademarks**

---

The Microchip name and logo, the Microchip logo, Adaptec, AnyRate, AVR, AVR logo, AVR Freaks, BesTime, BitCloud, chipKIT, chipKIT logo, CryptoMemory, CryptoRF, dsPIC, FlashFlex, flexPWR, HELDO, IGLOO, JukeBlox, KeeLoq, Kleer, LANCheck, LinkMD, maXStylus, maXTouch, MediaLB, megaAVR, Microsemi, Microsemi logo, MOST, MOST logo, MPLAB, OptoLyzer, PackeTime, PIC, picoPower, PICSTART, PIC32 logo, PolarFire, Prochip Designer, QTouch, SAM-BA, SenGenuity, SpyNIC, SST, SST Logo, SuperFlash, Symmetricom, SyncServer, Tachyon, TempTrackr, TimeSource, tinyAVR, UNI/O, Vectron, and XMEGA are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

APT, ClockWorks, The Embedded Control Solutions Company, EtherSynch, FlashTec, Hyper Speed Control, HyperLight Load, IntelliMOS, Libero, motorBench, mTouch, Powermite 3, Precision Edge, ProASIC, ProASIC Plus, ProASIC Plus logo, Quiet-Wire, SmartFusion, SyncWorld, Temux, TimeCesium, TimeHub, TimePictra, TimeProvider, Vite, WinPath, and ZL are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Adjacent Key Suppression, AKS, Analog-for-the-Digital Age, Any Capacitor, AnyIn, AnyOut, BlueSky, BodyCom, CodeGuard, CryptoAuthentication, CryptoAutomotive, CryptoCompanion, CryptoController, dsPICDEM, dsPICDEM.net, Dynamic Average Matching, DAM, ECAN, EtherGREEN, In-Circuit Serial Programming, ICSP, INICnet, Inter-Chip Connectivity, JitterBlocker, KleerNet, KleerNet logo, memBrain, Mindi, MiWi, MPASM, MPF, MPLAB Certified logo, MPLIB, MPLINK, MultiTRAK, NetDetach, Omniscient Code Generation, PICDEM, PICDEM.net, PICkit, PICTail, PowerSmart, PureSilicon, QMatrix, REAL ICE, Ripple Blocker, SAM-ICE, Serial Quad I/O, SMART-I.S., SQI, SuperSwitcher, SuperSwitcher II, Total Endurance, TSHARC, USBCheck, VariSense, ViewSpan, WiperLock, Wireless DNA, and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

The Adaptec logo, Frequency on Demand, Silicon Storage Technology, and Symmcom are registered trademarks of Microchip Technology Inc. in other countries.

GestIC is a registered trademark of Microchip Technology Germany II GmbH & Co. KG, a subsidiary of Microchip Technology Inc., in other countries.

All other trademarks mentioned herein are property of their respective companies.
