

1RU Single Channel Compact EDFA

The product is a high stability output power EDFA. The stability Pump Laser and unique ATC (automatic temperature control) and AGC (automatic gain control) circuit are employed in it as the key components to ensure the high stability and reliability of output power. The unique optical circuit design ensures the excellent optical character. The high stability and high precision MPU system are employed to ensure the control adjustment and display are intelligent and user-friendly. Professional design GFF (gain flattening filter) with excellent optical path design provides the best optimization on flatness and noise. It can provide 40~80 channels, and flatness above 35nm.

The optical circuit is designed especially for digital optical fiber communication system including lower noise figure, high output booster and high sensitivity Pre-Amplifier (to improve the system loss budget) and broad input power range and output power that can be modified easily.

Features

- Low noise figure: typical figure is under 4.5dB
- Redundancy hot swappable power module: supported 110/220VAC and -48VDC (or a mix)
- Works for 19' or 21' racks
- OLED display shows and controls the system parameters, LED status indication shows the alarm status.
- Support ETH, RS232 ports by RJ45
- Network Management interface supporting SNMP via Ethernet port
- AGC (Automatic Gain Control) or APC (Automatic Power Control) on optical output

Applications

- DWDM/CATV/SDH
