

Power and sensing

Selection guide 2021

At Infineon, we put our customers at the heart of what we do. We keep them at the forefront of all decisions we make.

在英飞凌，我们将客户置于我们工作的核心。我们始终将其放在所有决策的最前沿。

Andreas Urschitz,
Division President of Power and Sensor Systems
电源和传感系统事业部总裁

Dear customer,

The time of a truly connected real and digital world has arrived. Since the last edition of this brochure, the world as we knew it significantly changed due to the pandemic, posing new challenges in both our private and our professional lives. But new opportunities arose as well. The transformation into a more digital and connected life accelerated at a never-before-seen pace. Humanity relies on technology more than ever - for interactions, productivity, and efficiency. And technology depends on reliable, highly efficient, and high-performance semiconductor solutions.

The way we work may have changed, but one thing remained unchanged: At Infineon, we put our customers at the heart of what we do. We keep them at the forefront of all decisions we make.

The acquisition of Cypress Semiconductor in 2020 was an important step for us. It was the latest stage in our journey to offering an unparalleled range of hardware, software, and security solutions to meet our customers' needs. These needs have always been the key drivers behind our innovations and developments. We enabled system performance optimization through groundbreaking packaging concepts. We created new products which are smaller and deliver more. We expanded our manufacturing capabilities and global manufacturing footprint. We used our 40 years of know-how and deep system understanding to develop our next-generation silicon and wide-bandgap power portfolio, and our cutting-edge sensor offering. All the investments we make and all the features we build into our solutions aim to translate into benefits for our customers. We want to enable YOU to leapfrog your competition.

The Power and Sensing Selection Guide is intended to help you find the best-fit solutions for your needs. With this catalog, we remove choice overload and decision stress by arranging our broad cutting-edge portfolio and game-changing solutions around applications and technologies in a synthesized and easy-to-digest format.

Explore our comprehensive selection of power and sensor system solutions that make life easier, safer, and greener.

尊敬的顾客，

现实世界与数字世界真正互联的时代已经到来。自本手册上一版发布以来，我们所熟知的世界因为疫情而发生了巨大变化，这给我们的个人生活和职业生活都带来新的挑战。但是，我们也遇到了新的机会。我们的世界正以前所未有的速度加速向数字化的互联生活发生转变。为了提高互动、生产力以及效率，人类比以往任何时候都更依赖于技术，这些技术又取决于可靠、高效和高性能的半导体解决方案。

我们的工作方式可能已经发生改变，但有件事没有改变：在英飞凌，我们将客户置于我们工作的核心。我们始终将其放在所有决策的最前沿。

我们在2020年对赛普拉斯半导体的收购是我们重要的一步。也正是因此，我们能够更全面地提供无与伦比的硬件、软件和安全解决方案，从而满足客户的各种需求。这些需求一直是我们创新和发展的关键推动力。我们通过突破性的封装概念实现了系统性能的优化。我们创造了许多体积更小、性能更优的新产品。我们扩大了我们的制造能力以及全球制造规模。我们使用40年的专业知识和对系统的深刻理解来开发我们下一代的硅基和宽禁带电源产品组合，以及我们的尖端传感器产品。我们所进行的所有投资和解决方案中所开发的所有功能，都旨在为客户带来收益。我们希望能帮助您超越竞争对手。

这份Power and Sensing Selection Guide (电源与传感选型指南) 旨在帮助您找到最适合您需要的解决方案。这份目录中，我们以综合、易懂的形式，围绕应用和技术安排了广泛的尖端产品组合和颠覆性的解决方案，希望能借此帮助您消除选择负担和决策压力。

我们全面挑选的电源和传感器系统解决方案，旨在让生活变得更轻松、更安全、更绿色。快来探索吧！

Major home appliances

Innovative approach for air conditioning

Product designers are facing the daunting challenge of developing smaller, smarter, more powerful, and more energy-efficient appliances. Based on industry-leading technology and manufacturing expertise, Infineon’s line of innovative components for household appliances meets and exceeds even the most rigorous requirements for reliability and quality. The block diagram of an air conditioning system shown below, together with the product selection table, provides an effective recommendation for engineers to select the right component for each power management stage inside major home appliances.

In addition to efficiency gain through power solutions, Infineon’s XENSIV™ sensor portfolio also enhances major home appliances’ operation through advanced sensor-enabled use cases such as condition monitoring and predictive maintenance to detect potential device failures before they occur. Furthermore, integration of voice control or presence detection in those appliances increases user convenience and results in even more efficient devices.

Product category	Product family	Selection/benefits
Sensors	Pressure sensor	Airflow monitoring
	MEMS microphone	Noise monitoring
	Magnetic current sensor	Current sensing
	3D Magnetic sensor	Vibration and position monitoring
	Linear Hall sensor	Linear vibration monitoring
	Hall sensors and switches	Opened and closed lid detection
	Double Hall sensor	Speed and direction measurement
	32-bit XMC4000 industrial microcontroller Arm® Cortex®-M4	Data processing, sensor system management, cloud connection management and ethernet connectivity
	OPTIGA™ embedded security solutions	Data and cloud Security

Recommended products

Functional block	Topology	Voltage class	Technology/product family	Selection/benefit
PFC	IGBT – PFC (SC)	600 V	HighSpeed H3	Reference
	IGBT – PFC (SC)	650 V	TRENCHSTOP™ IGBT7 T7	Recommendation
	IGBT – PFC (no SC)	650 V	TRENCHSTOP™ 5 H5	Recommendation
	IGBT – PFC	600 V/650 V	TRENCHSTOP™ portfolio with Advanced Isolation	Easy to use
	IGBT – PFC (no SC)	650 V	TRENCHSTOP™ 5 WR5, TRENCHSTOP™ WR6 HCC	Best price performance
	IGBT – PFC TP (no SC)	650 V	CoolSiCTM Hybrid Discrete	Totem-pole best performance
	MOSFET – PFC	600 V	CoolMOS™ P7	Reference
	Diode – PFC	650 V	Rapid 1 and Rapid 2 diodes	Recommendation
	IPM – PFC CCM	650 V	CIPOS™ Mini PFC interleaved IPM series, CIPOS™ PFC integrated IPM series	Recommendation
	Low-side gate driver IC – PFC	22 V	25 V	EiceDRIVER™ 2EDN8524F/1EDN8511B
Single low-side driver EiceDRIVER™ 1ED44176N01F, 1ED44175N01B, 1ED44173N01B				Integrated overcurrent protection, fault and enable function in DSO-8/SOT23-6
25 V		Dual low-side driver IRS4427S	Rugged and reliable in DSO-8	
		Single low-side driver IRS44273L	Rugged and reliable in SOT23-5	
Half-bridge gate driver – totem pole PFC		650 V	EiceDRIVER™ 2ED2304S06F, 2ED2182S06F	SOI with integrated bootstrap diode
Inverter	IGBT B6-VSI	650 V	TRENCHSTOP™ IGBT6	Performance
	IGBT – B6-VSI	600 V	RC-Drives Fast, RC-D2	Cost/performance
	MOSFET - B6-VSI	600 V	CoolMOS™ PFD7	Cost/performance
	IPM – B6-VSI	600 V	CIPOS™ Mini, CIPOS™ Micro	Recommendation
	Half-bridge gate driver ICs	650 V	EiceDRIVER™ 2ED2304S06F, 2ED2182S06F	SOI with integrated bootstrap diode
	Half-bridge gate driver ICs	600 V	EiceDRIVER™ 2EDL05106PF, 2EDL23106PJ, IRS2890DS	Integrated bootstrap diode/FET
	Three-phase gate driver ICs	600 V	6EDL04I06PT, IR2136S, 6ED003L06-F2	OCP, fault and enable function
AUX	Fixed-frequency flyback	700 V/800 V	CoolSET™ Gen 5	Recommendation
Microcontroller/motor control IC	32-bit Arm® Cortex®-M4	-	XMC4100/XMC4200/PSoC®	Recommendation
	Motor/PFC controller (incl. motion control algorithm)	-	iMOTION™ IMC300	Recommendation
	Smart IPM for motor control	600V	iMOTION™ IMM100	Recommendation
Microcontroller supply	Linear voltage regulator	Up to 20 V	IFX1763, IFX54441, IFX54211, IFX3008	Efficiency
Communication	CAN transceiver	-	IFX1050, IFX1051, IFX1040	Robustness
Position sensing	Angle sensor	-	TLE5009, TLI5012B	Recommendation
	Hall switch	-	TLI496x	Recommendation
Condition monitoring and predictive maintenance	Pressure sensor	-	DPS368	Airflow monitoring
	MEMS microphone	-	IM69D130	Noise monitoring
	Magnetic current sensor	-	TLI4971	Current sensing
	3D Magnetic sensor	-	TLI493D-W2BW	Vibration and position monitoring
	Linear Hall sensor	-	TLE4997E	Linear vibration monitoring
	Hall sensors and switches	-	TLE4961-1K, TLE4961-3K; TLE4964-4M, TLE4913	Opened and closed lid detection
	Double Hall sensor	-	TLI4966G	Speed and direction measurement
	32-bit XMC4000 industrial microcontroller Arm® Cortex®-M4	-	XMC4700	Data processing, sensor system management, cloud connection management and ethernet connectivity
	OPTIGA™ embedded security solutions	-	OPTIGA™ Trust M	Data and cloud Security

Major home appliances

Highest performance and efficiency for induction cooking

Resonant-switching applications such as induction cooktops and inverterized microwave ovens have unique system requirements. The consumer marketplace demands them to be cost-effective, energy efficient, and reliable. To achieve the named goals, designers need solutions that are developed specifically for these applications.

Infineon's reverse conducting (RC) discrete IGBTs were developed for resonant switching with a monolithically integrated reverse conducting diode. With technology leadership and a broad portfolio of devices with voltage classes ranging from 650 to 1600 V, Infineon provides the industry benchmark performance in terms of switching and conduction losses.

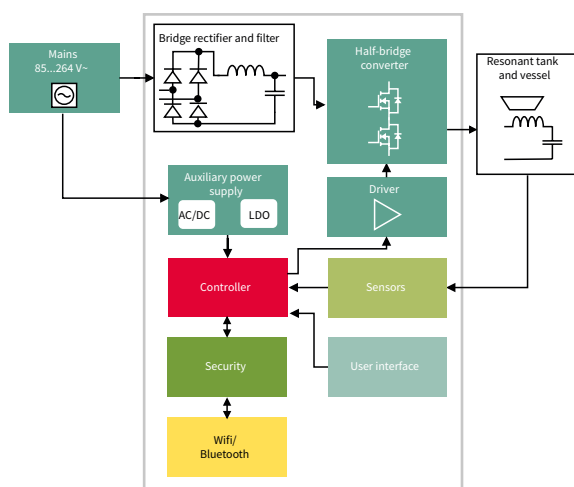

The latest RC-H5 family, previously offered with blocking voltages of 1200 V and 1350 V in a wide current range from 20 A to 40 A, is now with the addition of a new 1350 V, 20 A IGBT completed.

The Integrated Power Device Protect (IPD Protect), [IEWS20R5135IPB](#), is a new device in Infineon's portfolio for induction cooking applications, which adds new functionalities to standard discrete IGBTs. The innovative IPD Protect combines a 1350 V, 20 A IGBT in RC-H5 technology with a unique protecting gate driver IC in a TO-247 6-pin package.

The RC-E family is cost- and feature-optimized specifically for low- to mid-range induction cookers and other resonant applications. This new family offers Infineon's proven quality in RC IGBTs with the best price-performance ratio and ease of use. Infineon also offers a range of complementary products, such as low-side gate drivers and high-voltage level-shift gate drivers which can be used with the IGBTs, as well as in the central control and power supply subsystems of induction cooking appliances.

Refrigerators

Higher efficiency at lower cost

Today, consumers are not only looking at energy consumption and noise levels. Compact design coupled with maximum storage space is also playing an increasingly important role. In addition, there is a desire for intelligent appliances that can be easily integrated into the home network. From the manufacturer's point of view, the challenge is to meet the stricter regulations on energy efficiency while at the same time ensuring the form factor and a reduction in costs. Thus, intelligent, compact, energy- and cost-efficient drive solutions for refrigerators and freezers meet the high customer requirements.

Infineon offers a comprehensive portfolio for refrigerator compressors. Whether you choose the highest level of integration with our intelligent power modules (IPM) or aim for the best price/performance ratio with discrete components, our IGBTs, MOSFETs, gate drivers, and microcontrollers are designed to work together seamlessly. CIPOS™ family of IPMs is the optimal solution for highly integrated compressor drives whilst discrete solutions like the 600 V RC-D2 IGBT or the CoolMOS™ PFD7 SJ MOSFET are the best choice whenever layout flexibility and thermal performance optimization are the key design targets. If full-load operation and EMI performance are key for the design, the 600 V RC-D2 is the best choice. The diode is monolithically integrated and its current rating has been optimized for price and performance. The RC-D2 is the first IGBT family to introduce the SOT-223 package to further improve the price with a smaller package that is pin-to-pin compatible and substitutable with the DPAK package. They can all be combined with iMOTION™ products for dedicated motor control. For the auxiliary power supply, the CoolSET™ family rounds up our power portfolio by offering increased robustness and performance.

Our PSoC® microcontroller family, AIROC™ Wi-Fi & Combos connectivity products and XENSIV™ sensors complete the portfolio needed for a truly smart refrigerator. The energy-efficient CIPOS™ modules integrate various power and control components to increase reliability, optimize board size and reduce system costs. This simplifies power supply design and shortens time-to-market. Infineon offers the OPTIGA™ Trust hardware security solution and enables secure access to all major cloud providers.

CoolMOS™ PFD7 for next-level energy saving

Although both MOSFETs and IGBTs can be used in refrigerator compressor drives, as most of the time, the refrigerator operates under light load, the MOSFET is highly recommended due to its lower conduction loss, thus reducing overall power loss at this condition.

The 600 V CoolMOS™ PFD7 high-voltage MOSFET series, shaped by Infineon's experience of more than twenty years in pioneering in superjunction SJ technology innovation, sets a new benchmark in 600 V SJ technologies. This product family combines best-in-class performance with state-of-the-art ease of use, features an integrated fast body diode ensuring a robust device and allowing for reduced BOM for the customer.

Smart, connected and secured – system solutions for the new home appliance era

Modern refrigerators can sense their environment by being smart and connected. They provide data to their users as well as to the manufacturer (who can remotely analyze the performance data and suggest preventive maintenance). In this data exchange, secure communication systems play a crucial role.

Components and system solutions from Infineon enable you to build smart home appliances while providing secure data acquisition, control, and device connectivity. Furthermore, they enable the highest device efficiency, smallest form factors, and improved carbon footprint with smart power supply designs. Benefit from one of the most comprehensive, out-of-the-box product and design portfolios on the market to best meet your unique application needs.

XENSIV™ sensor solutions for smart refrigerators

Product category	Product family	Benefits
Sensors	XENSIV™ MEMS microphones IM69D130	High-performance microphone with low self-noise (high SNR) and low distortions enables noise monitoring for advanced predictive maintenance analytics
	XENSIV™ digital barometric pressure sensors DPSxxx	Advanced predictive maintenance analytics are enabled based on highest precision and relative accuracy over a wide temperature range to detect anomalies in airflow
	XENSIV™ TLV493D-A1B6 3D magnetic sensor	Accurate three-dimensional sensing with extremely low power consumption in a small 6-pin package to enable vibration and position monitoring of the compressor
	XENSIV™ TLI4970 current sensor	Fully digital solution featuring high precision and ease of use, significantly reduces overall implementation efforts as well as PCB space to enable cost fan and compressor current measurement
	XENSIV™ 60 GHz radar sensor	Accurate presence detection and vibration detection based on ability to track sub-millimeter motion at high speed and accuracy, in both stand-alone chip as well as system solution available

Class D audio amplifiers

No compromise on quality – products for exceptional audio performance

At Infineon, we manufacture power-efficient class D audio amplifier solutions that maintain best-in-class audio quality, without heating up the surroundings. We believe smaller and lighter is better, and that the amplifier embedded in your product should be heard, but not seen. Our amplifier solutions help you design robust, flexible products that meet the needs of your customers and the market. Choose from our high-performance class D audio amplifier solutions for all power ranges and application requirements, from the smallest fully integrated single-chip solutions to highly scalable driver and power MOSFET combinations (for a full portfolio, see [Audio amplifier ICs](#)).

Design with Infineon’s solutions to benefit from:

Exceptional audio performance	Maximized power efficiency	Maximized output power	Design freedom	Fast time to market

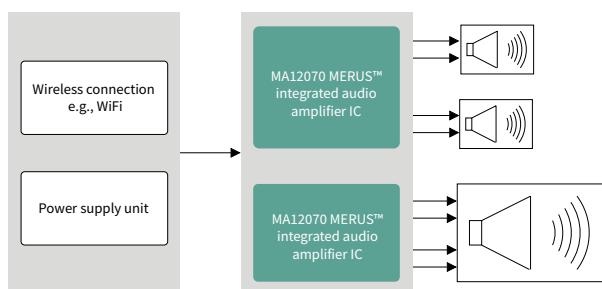

Portable/battery powered audio applications	Home audio applications	Professional audio applications

Home audio

Modern home audio products vary in shapes, sizes and configurations, but common requirement is great sound in combination with outstanding industrial and acoustic design. In addition to producing exceptional sound quality, MERUS™ amplifiers from Infineon can completely eliminate the need for bulky and expensive LC output filters and heatsinks. This allows the design of new innovative and great-sounding home audio products in form factors and shapes that were previously unthinkable.

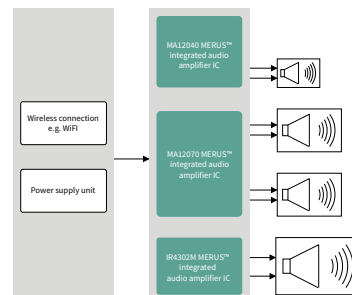

Solution example: 2.1 configuration (2xBTL + 1xPBTL)

Solution specification

- Number of audio channels:** 2 bridge-tied load (BTL) and 1 parallel BTL channels
- Peak power output:** 2x80 W @ 4 Ω, 10% THD and 160 W @ 2 Ω, 10% THD
- Featured audio ICs:** 2x [MA12070](#)

4.1 configuration (4xBTL + 1xPBTL)

Solution specification

- Number of audio channels:** 4 bridge-tied load (BTL) and 1 parallel BTL channels
- Peak power output:** 2x80 W @ 4 Ω, 10% THD and 160 W @ 2 Ω, 10% THD
- Featured audio ICs:** [MA12040](#), [MA12070](#), [IR4302M](#), [MA5332MS](#)

Portable audio

When designing portable/battery-powered audio devices, it is essential to maximize battery playback time, and at the same time, maintain excellent audio performance. Infineon’s MERUS™ amplifiers provide up to twice as long battery playback time in combination with the best-in-class audio performance and unsurpassed sound quality.

Solution example: 2.1 configuration (2xSE + 1xBTL)

Solution specification

Number of audio channels: 2 single-ended (SE) and 1 bridge-tied load (BTL) channels
Peak power output: 2x10 W and 40 W @ 4 Ω, 10% THD
Featured audio IC: MA12040P including volume control and limiter

Professional audio

Professional audio equipment is all about maximizing output power and power density. With the conception of Infineon’s MERUS™ multilevel class D technology and GaN-based CoolGaN™ e-mode HEMTs, it is now possible to conceive both amplifiers and power supply units with great audio performance and high efficiency in a very compact design. For engineers developing amplifiers, Infineon offers both monolithic and chip-set solutions with versatile MOSFET combinations for the scaling of output power.

Solution example: active speakers

Solution specification

Number of audio channels: 2 half-bridge channels
Peak power output: 500 W @ 4 Ω, 1% THD
Featured audio ICs: IRS2092S, IRS20957S

Solution example: public announcement 70-100 V system

Solution specification

Number of channels: 2 half bridge channels
Peak power output: 500 W, 70 V_{rms}/100 V_{rms}, 1% THD
Featured audio IC: IRS2452AM

Smart speaker

Speakers for an intuitive and outstanding user experience

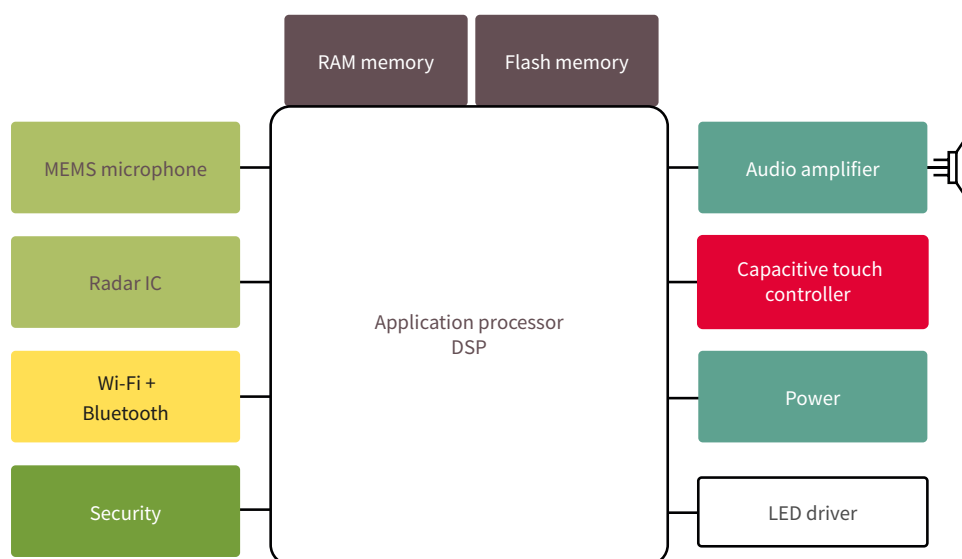

Once a novelty in households, smart speakers are more and more becoming increasingly commonplace. Rising user expectations accompany this rapid adoption. However, frustration with devices that do not understand or hear commands leads to lower user adoption. Consequently, growth rates for smart speakers are failing to reach their full potential. Components such as MEMS microphones, touch controllers, and new technologies such as radar are vital in improving the user experience in the smart speaker segment.

Infineon has long-standing expertise in sensor, connectivity and power solutions that fulfill the consumer market requirements in terms of outstanding performance, reliability and energy efficiency.

Features and benefits

Key features	Key benefits
<ul style="list-style-type: none"> › Low self-noise (high SNR) and distortion, a wide dynamic range, plus a high acoustic overload-point microphone 	<ul style="list-style-type: none"> › Improved audio input and thus command recognition, especially in extended use cases such as whispering or longer distances to the speaker for better user experience
<ul style="list-style-type: none"> › Ability to track sub-millimeter motion at high speed and accuracy 	<ul style="list-style-type: none"> › Precise object/presence detection for more contextual awareness to ease interaction
<ul style="list-style-type: none"> › Infineon's proprietary multilevel switching technology at fully rated power in a wide range of audio products 	<ul style="list-style-type: none"> › Very low power loss under all operating conditions, enabling the class D audio amplifier to be used in filterless configurations
<ul style="list-style-type: none"> › Ultra-low-power Wi-Fi and ultra-high power efficiency of the audio amplifier 	<ul style="list-style-type: none"> › Extended battery playback time or the reduction of battery size without compromising on battery playback time to save cost
<ul style="list-style-type: none"> › Highly efficient and power-dense SMPS solutions 	<ul style="list-style-type: none"> › Highly efficient charger in small form factor

Smart devices with NFC interface

NFC based configuration, actuation and sensing applications

Near-field communication (NFC) is a mature technology for contactless exchange of data over short distances. Besides the data exchange, NFC technology itself can also transfer power from the polling device to the receiver devices. Due to the working principle of resonant coupling, power transmission via NFC is efficient and user-friendly because it is less sensitive to antenna/coil alignment. The combination of data exchange and energy transfer in one interface and the availability in billions of smartphones make NFC exciting enabler for the following novel use cases:

Passive device parameter configuration: Programming or configuring product operation parameters is sometimes complicated because of access problems or equipment requirements. Using an NFC interface, contactless or even passive operation can be performed anywhere. Modern LED power supplies are already equipped with the NFC interface to enable output current configuration in production, sales channel, and the field. Infineon's NLM product series supports customers to enable NFC configuration functions effectively.

Example: NFC LED power supply

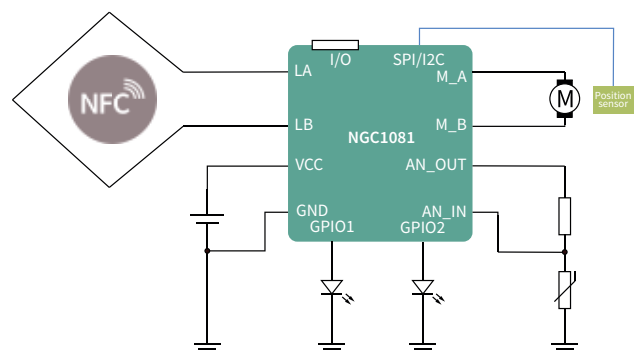

Smart actuator and sensing devices: In the IoT age, smart devices help people make their life easier and make products more sustainable. NFC technology provides an option to develop battery-less smart devices that operate when the NFC reader device, like a mobile phone, is present. As a complement to mainstream active IoT technology, passive NFC technology is suitable for use cases like a passive smart lock, passive sensor inlay, medical care patch, etc.

Example: NFC passive lock

With Infineon's new NFC tag-side controller family, a single-chip solution is available to develop cost-effective, miniaturized, actuation or sensing applications operating in either passive or active mode. The NAC1080, with integrated H-bridge and energy harvesting modules, enables cost-effective development of passive smart actuators like passive locks.

Example: Smart radiator thermostat

The NGC1081 is a low-power controller with ADC/DAC unit, integrated temperature sensor, and sophisticated analog and digital I/Os. It is the ideal solution for contactless sensing applications like temperature logger, gas detector, sensor inlay, medical patch, etc. Furthermore, both sensing and actuation control capability make the NGC1081 a unique product in the market, ideally suited for applications that require these functions – for example, radiator thermostats.

NFC configuration – NLM series

Type	Description	Package	Ordering code
NLM0011	Dual-mode NFC configuration IC with PWM output and CLO function	SOT23-5	NLM0011XTSA1
NLM0010	Dual-mode NFC configuration IC with PWM output, without CLO function	SOT23-5	NLM0010XTSA1

See [LED lighting](#) chapter for more information.

NFC actuation and sensing – NAC1080 and NGC1081

Highly integrated single-chip solution

The low-power ARM® Cortex®-M0 based microcontroller with integrated NFC frontend, sensing unit, motor driver, and energy harvesting function enables customers to develop smart actuation and sensing devices with minimum system BOM requirement.

Full flexible software-defined functions

The flexible IC architecture and the smart partitioning between hardware and software enable customers to maximize the utilization of software-defined functions.

Build-in security functions to meet the application requirements

These ICs include hardware security functions such as secure area in Flash, 128 bit AES accelerator and true random generator. A separate secure element can be connected via the digital interface on demand.

Robotics

Superior solutions for industrial and service robotics

Disruptive technologies have significantly changed our lifestyle in the past few decades. Now a new era is on the horizon – the age of robots. Robots are joining the ranks of innovative and disruptive technologies by revolutionizing traditional habits and processes. Today’s robots can identify and navigate through surroundings, work alongside and even interact with humans. Moreover, they teach themselves the skills required to complete a new task.

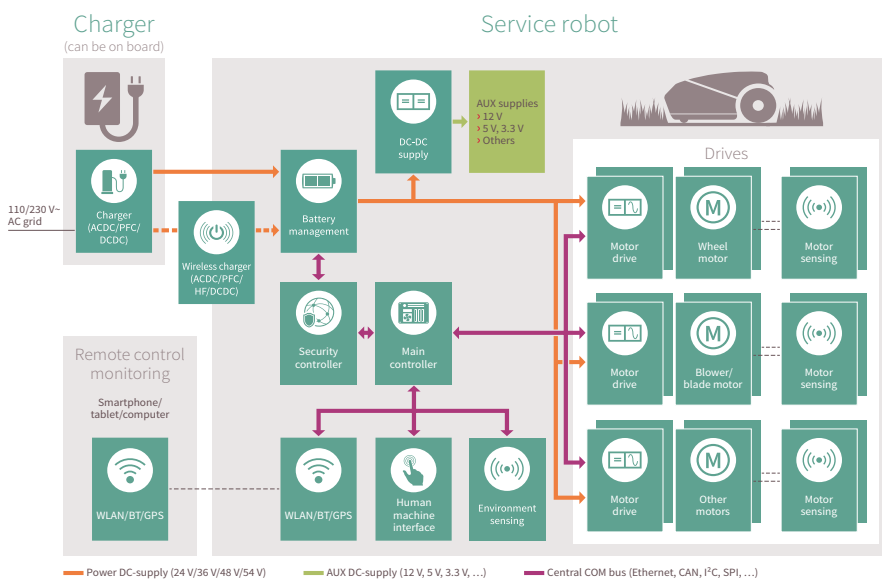

All this would not be possible without semiconductor solutions. Whether in an industrial robot, a collaborative robot (cobot), a mobile robot for warehouses, last-mile delivery (AGV & AMR) or a domestic robot, intelligent semiconductors are the key enablers for all major robotic functions. Drawing on our insight into all facets of the robotics field, and with a comprehensive portfolio of power products and sensors on offer, Infineon provides reliable system solutions that address the latest trends in robotics. Whether it is artificial intelligence, Internet of Things, smart home, cloud-based services, human-machine interface or any robotics-related field, Infineon has value to add to nearly all robot designs.

Features and benefits

Key features	Key benefits
<ul style="list-style-type: none"> Fast time to market 	<ul style="list-style-type: none"> A complete eco-system of simulations, documentation, and demonstration boards enable a faster time to market
<ul style="list-style-type: none"> Complete solutions – broad portfolio from power to connectivity (Wi-Fi & Bluetooth®) and Sensors 	<ul style="list-style-type: none"> Whatever design specification, Infineon has the answer thanks to its comprehensive portfolio of products and solutions which you can easily tailor to your needs
<ul style="list-style-type: none"> Extended battery lifetime and product life spans 	<ul style="list-style-type: none"> High reliability of Infineon components results in prolonged product life spans
<ul style="list-style-type: none"> Overall system size and cost reduction 	<ul style="list-style-type: none"> Reduction of overall system size and cost thanks to small form factor and compact design of components, both of which are required for highest power density
<ul style="list-style-type: none"> Security, quality, and safety 	<ul style="list-style-type: none"> BOM savings thanks to lowest $R_{DS(on)}$
<ul style="list-style-type: none"> Authentication 	<ul style="list-style-type: none"> Trustworthy hardware-based security
	<ul style="list-style-type: none"> As a security market leader with a proven track record and outstanding partner network for embedded security, Infineon provides highest quality standards and a safety-certified development process
	<ul style="list-style-type: none"> OPTIGA™ Trust enables authentication of components connected to the system (e.g., battery pack recognition to avoid second-party batteries)

Domestic robots - simplifying everyday life and work

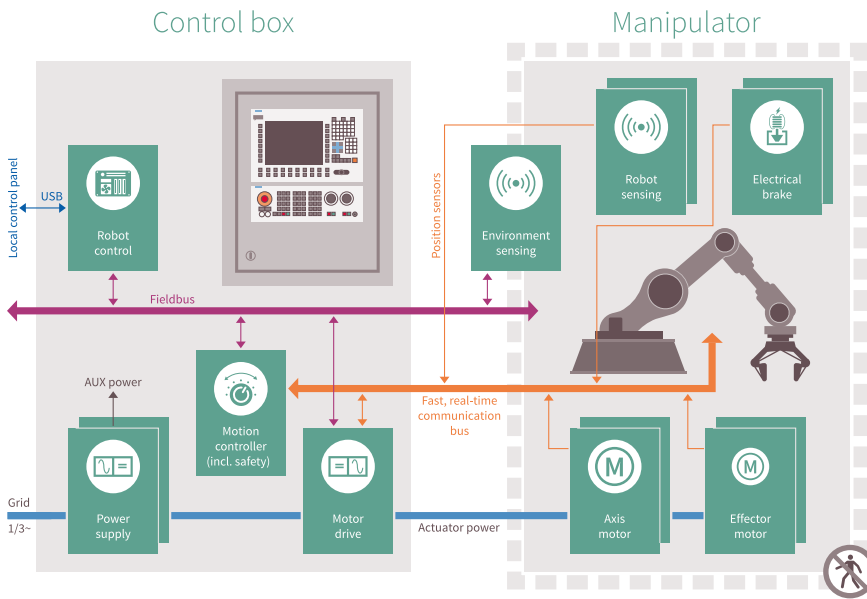

Structural system overview: domestic robots

The latest generation of domestic robots has ushered in a new level of assistance and simplicity in homes and professional environments. They directly interact with humans, which introduces unique challenges from a design perspective, especially in domestic environments. Energy efficiency, long battery life as well as security aspects and sensing capabilities are key to user-friendly and safe designs. By choosing Infineon, you get a one-stop semiconductor shop for all your service-robot design needs.

Industrial robots and cobots – advance through collaboration

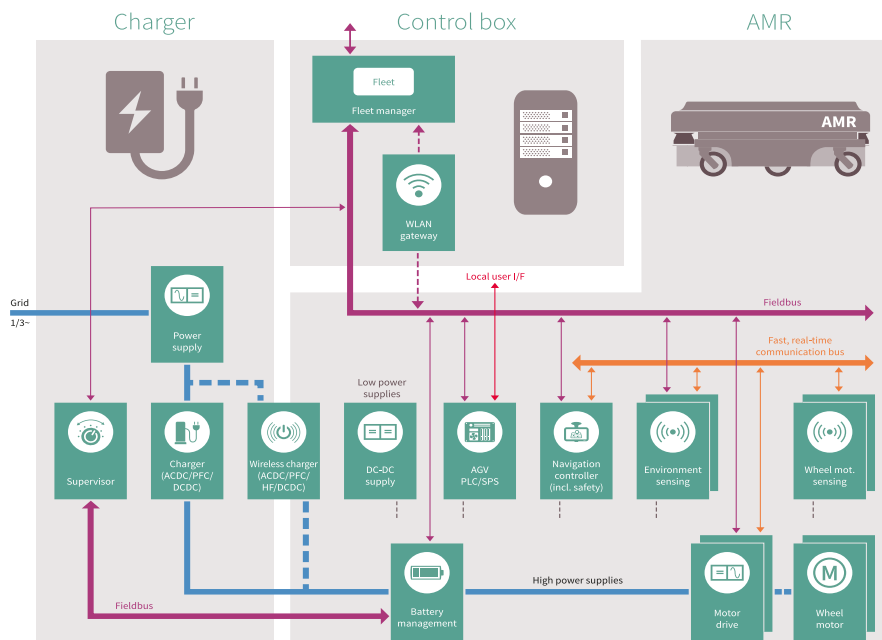

Structural system overview: industrial robots & cobots

Cobots, or collaborative robots, work outside the limitation of a safety cell, directly interacting with real people. This setup requires a precise set of design features, especially for the sake of workplace safety. With Infineon’s semiconductors for cobot systems, you benefit from the expertise of an experienced and reliable partner. Our radar and sensor solutions, for example, provide the tools to uphold even the highest safety standards and allow the robots to leave their formerly fenced working environment.

Mobile robots – driving production and logistics forward

Structural system overview: battery-powered mobile robots

Autonomous mobile robots (AMRs) are a self-driving force behind automated manufacturing processes. Battery-powered systems offer the highest degree of flexibility within working environments. Covering the entire product portfolio for robotics applications – from the power supply to motor drives and sensors for navigation and environment scanning – Infineon is equipped to ensure AMRs can find their way through nearly all production environments.

Others	Voltage regulator	DC-DC voltage regulator 12 V/5 V or 3.3 V, watchdog, error monitoring, safe state control, BIST etc.					
	LED Driver	Driving currents from 10 mA to 250 mA – linear driver ICs: BCR3xx , BCR4xx Support currents from 150 mA to 3 A – DC-DC switch-mode: ILD4xxx , ILD6xxx					

Smartwatches, sports watches, fitness bands and medical wrist-worn devices

Next level of wrist-worn devices with Infineon's excellent RF, sensing, connectivity, power, memory and security solutions

With its broad product portfolio, Infineon helps wearable manufacturers to overcome the following design challenges across all device categories:

- › the need for reliable device and data security to protect personal and sensitive information,
- › accurate sensor readings for precise location tracking and recognition between everyday movements and a fall event,
- › longer battery lifetimes and small form factors for elegant, unobtrusive designs.

Infineon's widely-deployed AIROC™ Wi-Fi and Bluetooth® Combo ICs portfolio offers the industry's best interoperability and RF performance. Infineon also helps customers to differentiate their offerings with highly efficient, secured and innovative solutions supporting the integration of additional use cases such as smart payment and ticketing, notifications and voice calls, Bluetooth® audio streaming, smart access or different ways of charging (wireless, NFC, USB).

A smartwatch provides a two-way connection via Bluetooth®, cellular baseband or Wi-Fi to a smartphone. It receives electronic communications like texts or voice calls, must display the time and have a glance-able display. These lifestyle devices monitor health and make communication (text, calls) more convenient.

A sports watch is a highly functional, robust and usually water-resistant device. Leisure or professional athletes mainly monitor their health conditions, fitness and sleep activities. Sports watches have fewer features compared to a smart watch as its main focus is on sports tracking.

A wristband or fitness band offers limited functionalities. Compared to a smartwatch, it just covers a selected amount of use cases (e.g. step counting, sleep monitoring, location tracking, access control, etc.).

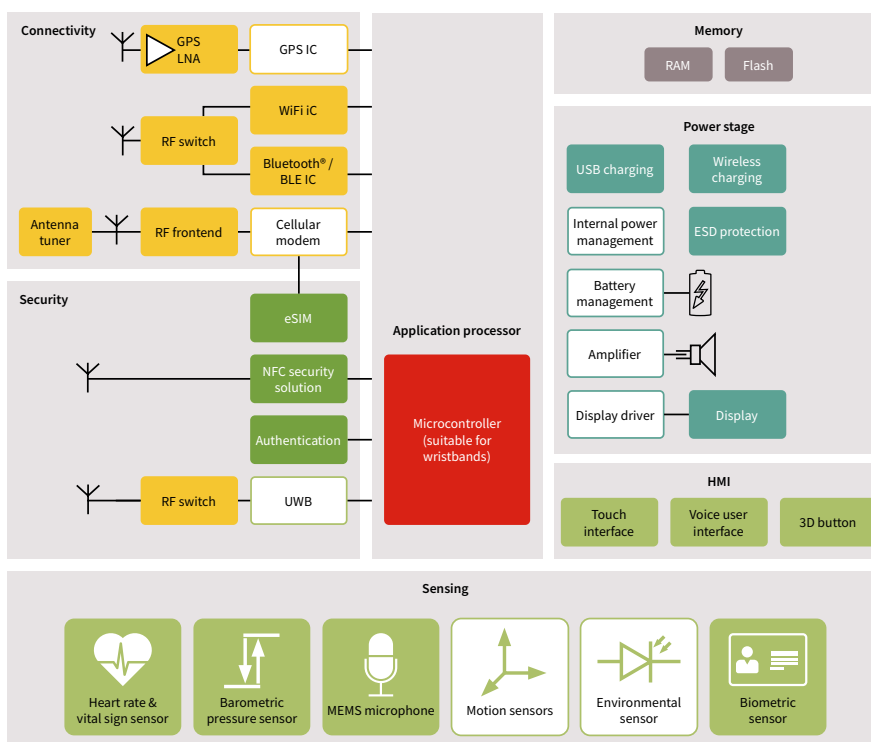

A medical wrist-worn device measures and analyzes physical activity and body functions of the wearer. These wristbands are used for elderly care, safety, connected health and much more.

Main use cases for wrist-worn devices

Main use cases for smartwatches, sports watches and wristbands

	 Notifications	 Bluetooth® audio streaming	 Voice recording and assistant	 Gesture control
	 Location tracking	 Contactless payment, access control and ticketing	 Information visualization (maps, news, videos, etc.)	 Physical condition monitoring (cardiac condition, blood pressure, blood glucose monitoring)
	 Health monitoring (heart rate, etc.)	 Sleep monitoring	 Body temperature monitoring	 Smartphone autonomy & broader mobile network accessibility
	 Fitness monitoring	 Speed monitoring	 Cloud authentication for safe data transfer and data privacy	 Car access control

● Use cases today ● Future use cases

Infiniteon the right partner to solve your design challenges

					
Highest accuracy and fast signal pick-up for location tracking and altitude measurement	Secure cellular network connection	Products with smallest form factors enable high functional integration	Integrated lowest power compute, BLE connectivity and most robust capacitive touch	Bluetooth® audio streaming with BT / BLE Combo SoC	Precise detection of single steps, body motions or fall events
					
USB-C fast charging capability	Lowest power, high reliability data storage	Easy, convenient and secure data transmission by NFC	Device protection to enable high user experience	High reliability and data throughput with Wi-Fi / BT connectivity	Low power consumption to increase battery lifetime

Wireless charging for consumer/industrial

Cost-effective and secure system solutions for consumer and industrial applications

Over the last years, wireless charging has gained more and more traction in the market and is expected to heavily influence our daily lives in the future. Infineon offers a broad portfolio of efficient, high-quality products and solutions to serve the key requirements of the dominant market standards: inductive (Qi (WPC)) and resonant (AirFuel). Whether a smartphone (e.g., at home or in the car), a handful of wearables, a power tool, a laptop, kitchen appliances or a service robot is being charged, Infineon's components and solutions help overcome a wide range of common wireless power transfer challenges for consumer and industrial wireless charging designs.

Wireless charging is a complex subject that requires in-depth system knowledge and expertise. Designers have to understand antennas and how they interact with surrounding structures. To successfully transfer power wirelessly, the power delivery has to be precisely controlled. By working closely with our experienced partners, we can help customers master all design challenges, including:

Applications that benefit from wireless charging

Infineon's key enabling products for consumer and industrial solutions

- > Power MOSFETs – OptiMOS™, StrongIRFET™ and CoolMOS™
- > Gate-driver ICs – EiceDRIVER™
- > P-channel and N-channel small signal power MOSFETs
- > 32-bit microcontrollers – XMCTM, AURIX™, PSoC®
- > Wireless power controllers (including software IP) – XMCTM-SC
- > USB Type-C Port Controller
- > Authentication - OPTIGA™ Trust Charge
- > PSoC® 4 Bluetooth® Low Energy (Bluetooth® Smart)
- > AIROC™ Bluetooth® LE & Bluetooth®
- > PWM/flyback controllers and integrated power stage ICs – CoolSET™
- > GaN HEMT – Gallium Nitride Transistor - CoolGaN™
- > Voltage and buck regulators for component and bridge supply
- > Reverse Conducting IGBTs R5/R6 - 650 V

USB-C charger

Best solutions for mobile charger

Modern mobile devices require a charger that provides faster charging but comes in a small size. High power density and cost-effective power supplies can be designed by operating the converter at a higher switching frequency to avoid a considerable increase in the transformer and the output capacitor size. In achieving the required thermal performance and EMI behavior, power devices with lower losses and controlled switching behavior enable effective and fast product development. To address these requirements, Infineon offers its CoolMOS™ P7 SJ MOSFET family for adapters and chargers. Special care has been taken to ensure very good thermal behavior, increased efficiency, meeting all EMI requirements and ease of design. In addition, power devices in IPAK/SMD packages enable optimal PCB layout through minimal footprint. SMD packages offer additional benefits for automatized large volume production. Specifically, Infineon’s SOT-223 cost-effective package enables high power density at low manufacturing cost allowing SMT manufacturing to maintain very good thermal performances. Infineon’s state-of-the-art XDP™ digital-based controllers enable the forced-frequency-resonant flyback, forced-quasi-resonant flyback, as well as hybrid flyback with zero-voltage-switching (ZVS) operation, ideal for high-power-density adapters and well support USB-PD (power delivery) requirements. In addition, the digital soft-switching controller, CoolMOS™ high-voltage MOSFETs, OptiMOS™ low-voltage MOSFETs and synchronous rectification IC and broad EZ-PD™ protocol controller portfolios enable high power density designs possible whilst meeting the thermal requirements. The EZ-PD™ CCG3PA-NFET is a highly integrated USB-C PD port controller for power adapters. It integrates NFET gate driver for VBUS and is compatible with the latest USB-C Power Delivery standard. In addition CCG3PA-NFET also supports legacy protocols including QC4.0, Apple 2.4 A charging, Samsung AFC and BC1.2 with no additional BOM.

As the charger and adapter market has undergone a paradigm shift recently, and the original equipment manufacturers (OEMs) no longer sell the chargers/adapters together with the devices, the end-user demand for aftermarket supply has increased. It triggers multi-port (like 1A1C, 2C, etc.) designs from a technology point of view. The multi-port control with dynamic load sharing poses a new challenge for designers. Through its product offering, Infineon aims to help debunk the most efficient USB-PD designs and shorten time-to-market for its customers.

SMPS

Diversify TV power supply with cost, performance, and ease of use

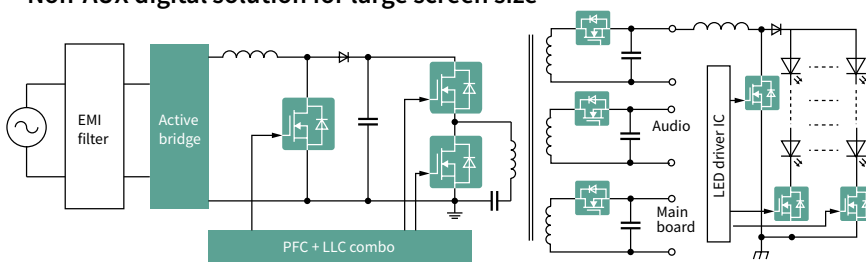

In addition to their outstanding image quality, new generation TVs gain attention for their user interface, low power consumption, and slim design. This requires the power supply unit (PSU) to either keep a low profile to maintain the slim appearance of a TV and a low thermal dissipation image or to have an external adapter. In addition, a growing number of TV manufacturers use external adapters to deliver DC power to the TV. Infineon products based on digital power technology have been designed to meet challenging efficiency and standby power requirements for the IoT-enabled TVs (both embedded PSU and adapter).

Thanks to digital power, our customers can reduce the number of TV power supplies by adapting the digital IC parameters to different TV and screen models by flexible and easy parameter-setting. Infineon's digital-based flyback controllers are ideal for low-power adapters for TVs and monitors. With digital soft switching, the adapter power density can significantly be improved.

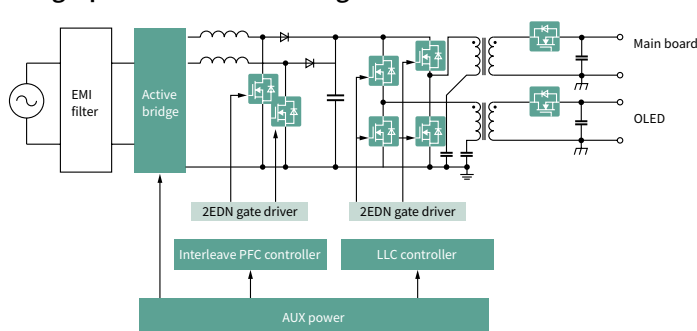

The 600 V CoolMOS™ P7 series has been developed to cover a broad spectrum of different applications where excellent performance and perfect ease of use are required. The rugged body diode enables the use of hard-switching topologies, such as power factor correction (PFC), boost, and two-transistor forward (TTF) and resonant topologies such as LLC, where the technologies lead to high efficiency in both hard-switching and resonant circuits.

For higher on-state resistance ($R_{DS(on)}$) classes, there is a new feature of an integrated ESD diode that helps improve the quality in manufacturing. At the same time, the low $R_{DS(on)}$ and gate charge (Q_G) enable high efficiency in the various topologies. The 600 V CoolMOS™ P7 comes with a wide variety of $R_{DS(on)}$ s and packages on consumer-grade to make it best suitable for TV power by balancing the cost and performance. Infineon developed specifically for TV power supplies a family of packages, characterized by short lead, SOT-223 mold stopper, and wide creepage distance, which enable low-cost and reliable manufacturing for our customers.

OLED TV power block diagram

OLED TVs improve user experience as they can be thinner, lighter, more flexible, and consume less power than LCD/LED TVs. With the excellent performance of Infineon's GaN e-mode HEMTs, the OLED TV becomes even thinner and more reliable (for the full CoolGaN™ portfolio, see [CoolGaN™ e-mode HEMTs](#)).

Surveillance camera

Make your surveillance camera IoT-ready

Advancements in video surveillance technology take indoor and outdoor security solutions to the next level. They help you protecting your building against undesired intruders and detecting unusual behaviors. Smart cameras that are connected to management systems and cloud platforms detect intruders more easily and alarm you in case of danger. By equipping surveillance and IP cameras with reliable and accurate sensors and connectivity solutions, safety-enhancing IoT features can be implemented, significantly improving detection of intrusion and other unusual behavior. Of course, cutting-edge camera technology needs to run reliably and efficiently to guarantee image capturing at all times while also reducing operating costs and needed bandwidth. Connected IP cameras often demand low-power with advanced thermal features.

Infineon offers a broad range of products to make surveillance cameras smart and connected. The connectivity solutions portfolio for Wi-Fi, Bluetooth® and USB offers stable connection to cloud and management systems. Sensors such as Infineon's XENSIV™ [BGT60LTR11AIP](#) radar sensors can help overcome bandwidth limitations, for example, by the waking-up function when motion near the camera is detected. At the same time, Infineon's embedded security solutions make connected surveillance cameras more robust against cyberattacks, while the highly efficient power MOSFETs allow for low power consumption and efficient operations.

Application diagram

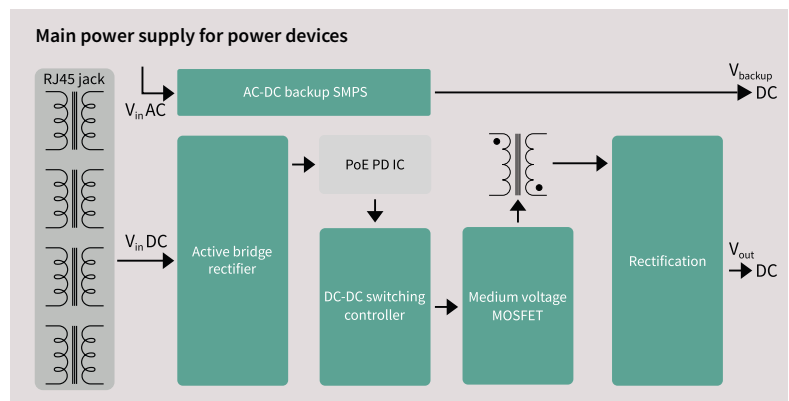

Power over Ethernet (PoE)

Designing reliable and power-efficient PoE power supplies

The latest IEEE 802.3bt standard for Power over Ethernet (PoE) not only increased the available power via PoE but also changed requirements for its power supply. Power sourcing equipment (PSE) now provides up to 100 W per port via a twisted pair of Ethernet cabling, whereas powered devices (PD) will have up to 71 W available. The adoption of this new PoE standard also largely depends on the capability to increase the power density on the PSE side while maintaining the same form factor as wide load conditions and higher power budgets change requirements. Infineon has long-standing expertise in switched-mode power supply (SMPS) designs and offers a highly reliable, rugged and efficient high-quality MOSFET portfolio for your PoE PSE and PD designs.

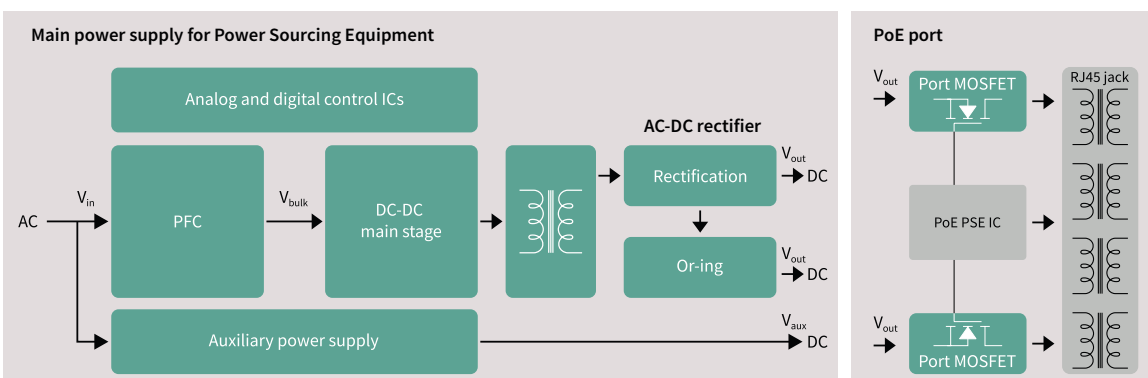

Powered devices

Powered devices (PD) include devices powered by PoE such as wireless access points, 5G small-cell radio units, IP cameras, conference systems, thin clients or public address systems. DC-DC SMPS designs need to be power efficient to maximize the available power for the PD itself with the simultaneous increase of power density. Moreover, PDs need to function reliably in the field even under potentially rough conditions for a long time.

Power sourcing equipment

Power sourcing equipment (PSE) is any equipment that is able to provide and source power on the twisted pair Ethernet cable, such as PoE switches, PoE extenders and PoE injectors. PSE needs to be highly reliable to prevent device failure and ensure uninterrupted operations of connected power devices. With IEEE 802.3bt PoE, the power demand for PoE switches significantly increases with highest efficiency over wide load conditions. For example, to fully enable a switch with twenty-four 802.3bt compliant PoE ports, up to 2.4 kW of available PoE power budget is required. This makes modifications in AC-DC SMPS designs necessary to fulfill these requirements.

LED lighting

Solutions for cost-sensitive applications as well as for smart lighting

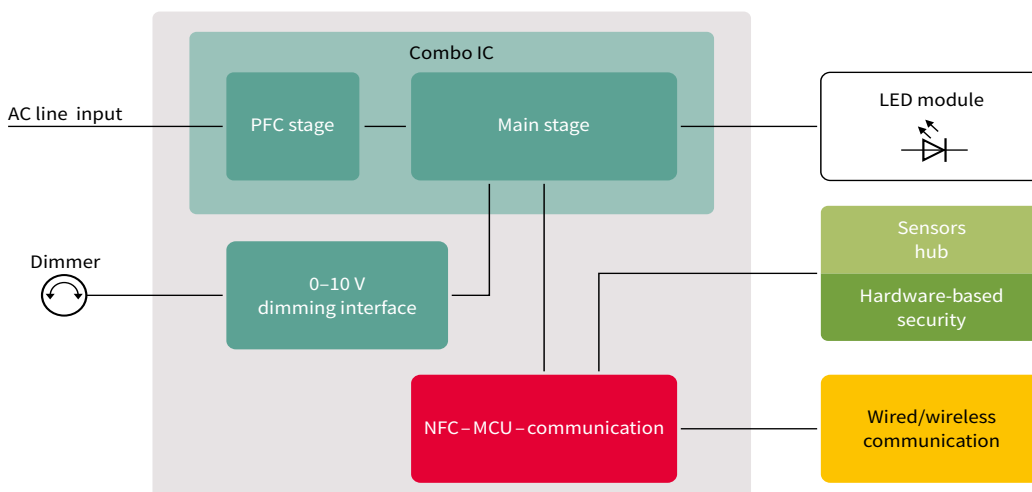

Infineon supplies tailored products for LED drivers, LED strips, horticultural and smart lighting. Our broad portfolio of tailored products and solutions for LED lighting comprises LED driver ICs, MOSFETs, and microcontrollers suited for LED drivers as well as sensors and dedicated ICs for secure communication. In addition to offering products of proven quality, a competent global lighting team supports our lighting customers in designing LED lighting products and systems in collaboration with our channel partners.

Key trends and challenges in LED lighting and our offering:

- › Human-centric lighting (HCL)
 - The lowest cost implementation of tunable white with single-stage flyback constant voltage and smart linear regulators with advanced headroom control ensuring high efficiency – [BCR601](#)
- › Configuration of output current and some further parameters
 - Our NFC controller allows the configuration of the output current without the need for an additional microcontroller
 - Our XDPL lighting IC family allows, besides output current, also adjustment of other features like protection, dimming curves, etc.
- › Cost reduction combined with efficiency increase
 - Integration of resonance inductor for PFC + resonant topology enables highest efficiency at low cost
 - Integration is enabled by the coreless transformer technology that enables high switching frequencies

LED driver with constant voltage output and linear/switch mode LED driver ICs

Linear LED driver IC product portfolio

Functional block	Topology	IC product family	MOSFET technology
Lowest cost LED driver IC	Linear	BCR400W series	Integrated
Low voltage drop LED driver IC		BCR430/BCR431	
Robust LED driver IC		BCR40xU/BCR42xU	

For additional portfolio, take a look at [Lighting ICs](#).

1) 700 V, 800 V and 950 V CoolMOS™ P7 are optimized for PFC and flyback topologies. 600 V CoolMOS™ P7 is suitable for hard as well as soft switching topologies (flyback, PFC and LLC)

2) PFC and resonant combo controllers

3) PFC and flyback combo controllers

4) Higher input voltage

* In addition to current configuration also constant lumen output (CLO) feature is included.

Plug & LEDs play solutions

Modular LED lighting reference designs for LLC, buck and PFC flyback topologies

LED lighting has become a mature technology with stringent requirements on light quality. In order to achieve high light quality, there is a strong trend towards two-stage topologies. These two-stage topologies ensure that the light flicker or also called light ripple remains at low levels according to the IEEE 1789 standard and other new upcoming regulations. Primary constant voltage output, followed by a DC-DC buck, enables dimming, efficiency, cost and scalability benefits. Infineon has solutions for both the primary AC-DC stage as well as for the secondary DC-DC buck stage. These solutions can be combined in a plug & play concept. In other words, depending on the requirements, the suitable AC-DC stage and the best fitting DC-DC stage can be selected and tested.

Our solutions include but not narrowed down to:
Low to medium power platform promising tunable white at low cost

320 W DCM PFC cost-effective and scalable platform design with up to 4 DC-DC channels

Smart lighting solutions

Connectivity and sensor solutions for connected and smart lighting to facilitate everyday life

In the last few years, connected and smart lighting has gained high momentum in the lighting industry. In this application field, sensing and connectivity play an essential role. Besides helping to realize energy savings, they also enable new use cases that go beyond lighting controls.

Radar sensor solutions

For energy saving, passive infrared (PIR) sensors are used. Novel sensors like radar can overcome weaknesses of PIR sensors like poor design, limited detection of micro-movements, and limited area coverage, to name a few. Radar sensors can be seamlessly integrated into the luminaires enabling nice design as well as platform design of luminaires since there is no need for drilling holes as in the case of PIR sensors. Advanced use cases like people counting and people tracking can also be ensured with radar technology. In order to add more intelligence into the entire system, connectivity is a key element.

Our partners:

Our system design house partners deliver both standard products and customized solutions to fit specific lighting applications from movement detection through automatic light activation to person counting. In addition, they offer all levels of support to get your intelligent lighting system up and running as quickly and efficiently as possible. See below a list of some of our partner solutions and check our [Lighting brochure](#) for more.

Functional block	Topology	IC product family
RF Beam	K-LD2	Presence detection including slight movements
	K-LD7	
InnoSent	INS-313x	Motion detection range up to 5m
	INS-333x	Motion detection range up to 10m
Novelic	RIOT100 – NRM302	Turnkey motion and presence sensor solution up to 15m

Additionally, Infineon provides numerous radar solutions. Please find out more about them in [Radar sensor ICs](#) chapter.

Bluetooth® Mesh devices and modules for connected and smart lighting applications

Embedding Bluetooth® Mesh networking in lighting systems, including luminaires, fixtures, and wall switches, opens a range of system applications to manage lighting brightness or color, efficiency based on occupancy movements, and correlation of lighting ecosystem components. The range and coverage of Bluetooth® Mesh devices allow for low latency, whole building coverage of automation and occupancy interaction via smartphone and tablet applications, as well as cloud applications for building management. Infineon provides a range of Bluetooth® Mesh MCUs and certified modules that enable lighting control functionality, safety and occupancy sensor management and robust, secure, reliable networked managed solutions.

Bluetooth® Mesh SoCs and certified modules: solutions and benefits

Bluetooth® Mesh system-on-a-chip (SoCs) and certified modules offer a range of efficient and future-proof upgradeable solutions:

Solutions	Benefits
<ul style="list-style-type: none"> > Module diversity with integrated components ranging from the basic battery-powered sensor to the most sophisticated detection and safety devices 	<ul style="list-style-type: none"> > Accommodating different needs now and in future
<ul style="list-style-type: none"> > Fully-integrated modules 	<ul style="list-style-type: none"> > Accelerate time-to-market > Reducing development and manufacturing costs

Wi-Fi enterprise networking and internet connectivity

Wi-Fi networking is the back-bone of enterprise, retail, and home internet connectivity. Wi-Fi is the bridging medium for Bluetooth® Mesh networks to enterprise networks and cloud applications capturing messaging from across the lighting installation for secure enterprise building management applications. Wi-Fi can also be used to connect sensors and fixtures directly to enterprise or home access points for long range solutions or integrated solutions including security lighting and cameras. Infineon offers a range of secure, high performance enterprise ready Wi-Fi solutions that can be added to switches, panels, and lighting bays. These solutions can be stand-alone network nodes or offer Bluetooth® Mesh Gateway services bridging Mesh-networked devices to cloud applications.

IoT Wi-Fi portfolio

Technology	Wi-Fi	Wi-Fi + MCU	Wi-Fi + Bluetooth® combos

Power and gardening tools

Battery-powered home and professional applications

Infineon is bringing reliability and safety to consumer projects. Millions of households worldwide rely on power tools to complete daily tasks or creative projects around the home. Consumers want robust, reliable and portable power tools that are easy-to-use with low price and long battery life as key selection options. Battery-powered tools must also be equipped with diagnostic and safety features to ensure confidence with high quality.

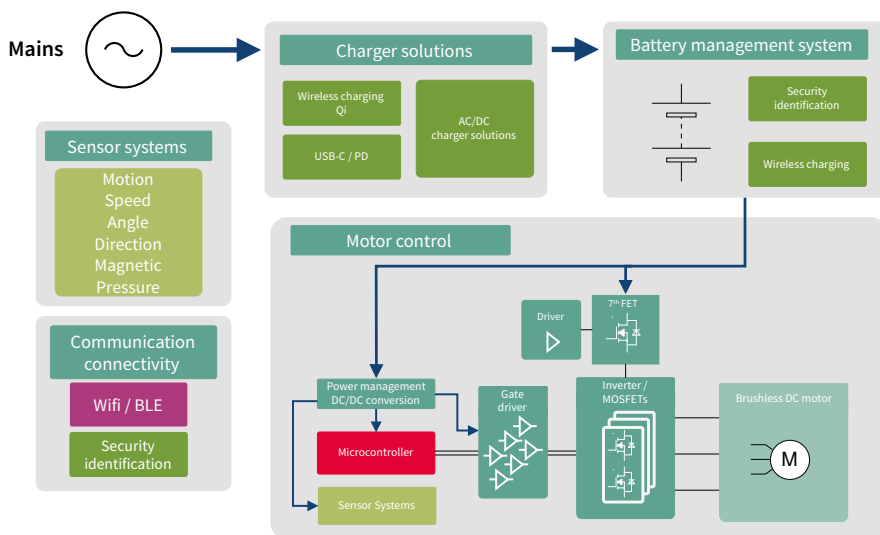

Infineon’s broad portfolio offers best-fit, innovative solutions for all power tools applications. We help you meet each consumer need and reduce your overall costs. Also, our wireless-charging reference designs deliver high performance and are easily optimized in our DAVE™ development platform. Configure your BOM and exceed expectations with Infineon components in your cordless power tool designs.

Battery formation

Solutions that make battery formation equipment more accurate and efficient

Everyday routine is increasingly pervaded by a growing number of wireless and battery-powered devices – electric vehicles (EVs) amongst them. This trend further drives a steadily rising demand for the production of batteries with different charging capacities. Consequently, battery manufacturers find themselves confronted with the challenge of increasing efficiency throughout their production and meeting the required volume.

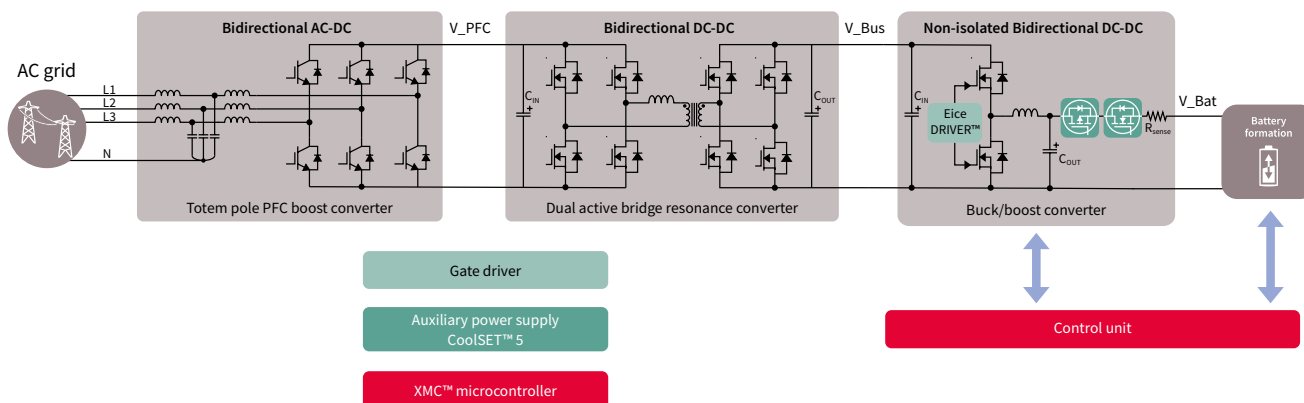

The essential stage every battery needs to undergo in the manufacturing process is battery formation. In it, the newly assembled batteries are initially charged and discharged with high voltage and current accuracy to activate the battery material. Formation cycling has a great impact on battery lifetime, quality and cost, but is currently the bottleneck in the production process as it is expensive and time-consuming.

With its comprehensive product portfolio of cost- and efficiency-optimized products, Infineon offers full-spectrum power system solutions and adequately addresses the application requirements of high accuracy, efficiency, and power density.

Features and benefits

Key features	Key benefits
<ul style="list-style-type: none"> > High voltage and current accuracy (up to 0.01%) during charge and discharge cycles 	<ul style="list-style-type: none"> > Highly efficient, innovative and cost-attractive solutions leading to overall BOM savings enabling size reduction

Energy storage systems

Make energy storage systems the backbone of the new energy era with our semiconductor system solutions

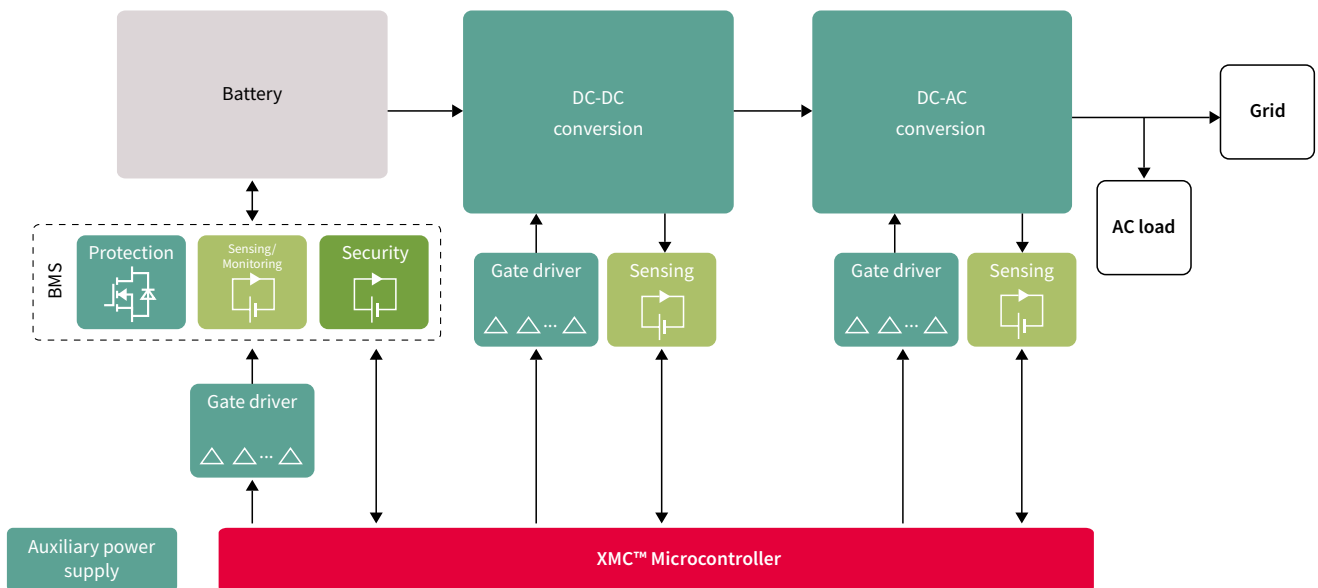

Facing diminishing fossil reserves, the world nonetheless needs to manage the rising demand for electrical energy while meeting the growing call for urgent climate action. The transition to renewable energies has become inevitable.

Energy storage systems play a vital role in managing this transition successfully. Our system solutions help make energy storage the backbone of the new energy era. Our unique application expertise and comprehensive offering make us the natural choice to advance energy storage solutions in efficiency, performance, optimal cost, and innovation.

Solar

High efficiency designs for solar power systems

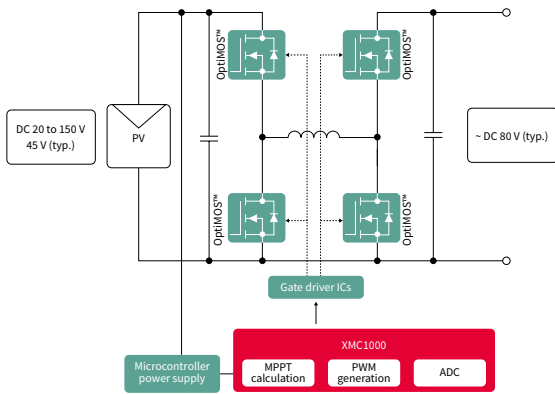

Infineon provides a comprehensive portfolio to deliver the best efficiency and reliability for solar applications. Cutting-edge technologies such as CoolMOS™ SJ MOSFETs, HighSpeed 3 IGBT and TRENCHSTOP™ 5, CoolSiC™ Schottky diodes, CoolSiC™ MOSFETs, coreless transformers, drivers and many more combined with the rich experience and highest quality ensure Infineon's unique supplier position for solar applications. The newly added Arm® Cortex™-M4 based MCU enables easy and high-efficiency design.

Single-phase string inverter – multilevel topology

In a multilevel inverter, four high-voltage MOSFETs/IGBTs in an H-bridge topology are replaced with a higher number of lower-voltage MOSFETs. Compared to a conventional H-bridge inverter, a multilevel inverter, composed of lower voltage MOSFETs, offers several advantages:

- › With much lower $R_{DS(on)}$ and switching loss parameters, it significantly reduces conduction and switching losses
- › Higher effective output frequency (smaller magnetics) is possible with lower switching losses
- › Improved EMC due to reduced switching voltages
- › Significant reduction in the cooling system, size and weight

FET-based high-voltage solid-state relays

Best-in-class $R_{DS(on)} \times A$ enables unprecedented low losses in combination with advanced control and protection features

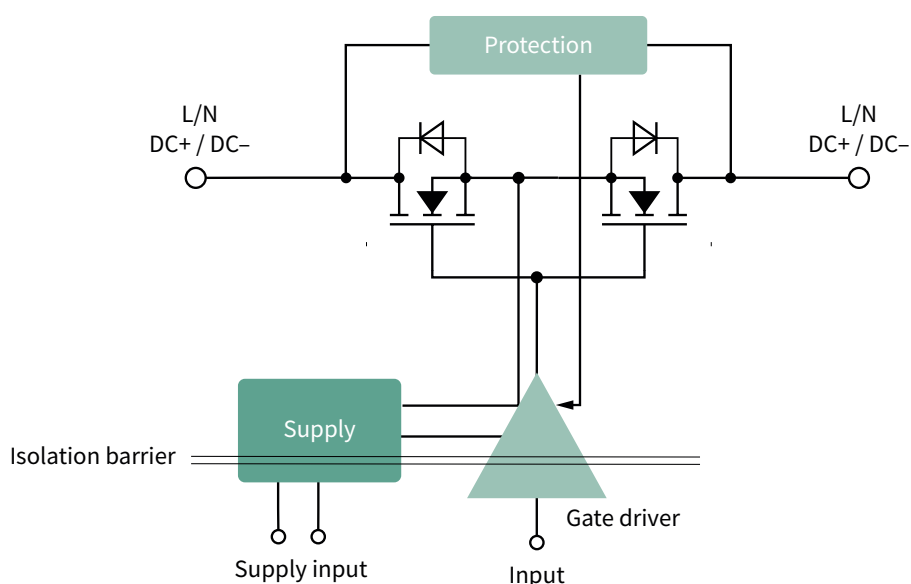

Electromechanical relays are a mature technology and well established. However, they suffer from some inherent weaknesses. The mechanical movement of metal contacts causes noise. The high voltages can arc before the contacts are completely opened or closed, which leads to contact degradation. An increase of the contact resistance over the lifetime causes behavior to become less predictable. Triacs (or silicon-controlled rectifies, SCRs) are widely used as solid-state relays in AC applications. However, their controllability is limited and they suffer from high power dissipation in the range of 1 W/A.

FET-based solid-state solutions offer many benefits in relay applications. This includes significantly faster switching while eliminating arcing and the noise associated with electromechanical devices. Inherently, these result in higher reliability and more stable performance. When considering the maintenance, repair and operations (MRO) cost, a strong argument can be made for using solid-state. Compared to atriacs, a FET-based solution offers advanced control and protection methods. The significantly lower power dissipation minimizes the cooling effort in the application. The latest CoolMOS™ S7(A) technology is a perfect match for solid-state relay applications. It offers an unprecedentedly low $R_{DS(on)} \times A$ figure of merit that will meet the needs of customers and their end markets.

SMPS

Full system solutions for embedded power supplies

Customers who design or manufacture a product that needs embedded intelligence typically want to focus on the system design of their product, be it white goods, a vending machine, an automatic door opener or any other product. They do not want to spend valuable time and extra effort in designing the power supply systems. They just want to use them, having a trouble-free, EMI friendly, and reliable power supply.

Along with a wide range of products, we developed flexible and easy to reuse reference designs with the intention to provide our customers with best fitting solutions tailored for their different needs.

Depending on these needs, our customers can select very low-cost power supply reference designs featuring high integration or using a platform approach to reuse the same power designs for different products that need different power supplies. If high efficiency is needed, for example to meet ENERGY STAR label requirements or to improve overall thermal performance, we offer power supply reference designs with outstanding efficiency levels.

Our comprehensive reference design offering coupled with application notes help our customers to drastically improve the efficiency of their power supply by using secondary-side synchronous rectification instead of a rectifier diode. Benefits of synchronous rectification are greater efficiency and improved thermal performance of the power supply.

Industrial SMPS

Reliable and robust

Industrial SMPS powers a wide range of devices from industrial automation robots to medical equipment and vending machines. With the expansion of the Internet of Things (IoT) and the adoption of Industry 4.0, the demand for industrial SMPS is on the rise. Industrial switch-mode power supplies (SMPS) are mostly operated in outdoor environments without air conditioning or systems without fans. Such operating conditions make reliability and robustness the key requirements for the industrial SMPS, especially when it comes to high-temperature operations, outdoor use, line surges, load jumps, short circuit, etc. In addition to quality, reliable supply and long-term product availability are also some of the key customer concerns. Industrial SMPS life cycle goes over 10 years and it takes 3 to 5 years to ramp. Hence, not only do customers need a high-quality product, but also a stable and reliable supply over the industrial SMPS life cycle (10 to 20 years). Infineon offers this with its CoolMOS™, OptiMOS™, and StrongIRFET™ product families with EiceDRIVER™ gate driver, which thanks to the high robustness and reliable performance have been meeting customer and market requirements for more than 20 years. Infineon's products offer the best price/performance ratio along with the highest efficiency and reliability. For new designs, we highlight our CoolMOS™ P7 600 V/800 V/950 V parts, as well as the latest generation of OptiMOS™ 30 V/40 V/60 V/80 V/ 100 V/150 V and 250 V products. For designs with convection-cooled, high power supplies, our CoolMOS™ S7 in active bridge will reduce the power losses to enable the operation without fans.

DC-DC enterprise power solution for data processing applications

Multiphase and point-of-load DC-DC solution

As an industry leader in digital power management, Infineon delivers solutions for the next-generation server, communication, storage and client computing applications. Infineon offers a complete portfolio including digital PWM controllers, integrated power stages, integrated point-of-load (POL) voltage regulators, MOSFET drivers, power blocks and discrete MOSFETs. These proven technologies offer full flexibility to our customers to optimize a complete system solution for space, performance, ease of design and cost to meet critical design goals. In addition, our latest software tools help simplify design, shorten design cycles and improve time-to-market.

Integrated point-of-load (IPOL) converters

Infinion's IPOL converters integrate a PWM controller, a driver and MOSFETs into a small PQFN package for ease of use. The patented PWM modulation scheme allows greater than 1 MHz switching frequencies to deliver ultracompact layouts and the smallest bill of materials (BOM). A PMBus™ interface is available for monitoring and control in systems that use advanced CPUs, ASICs and FPGAs.

SMPS

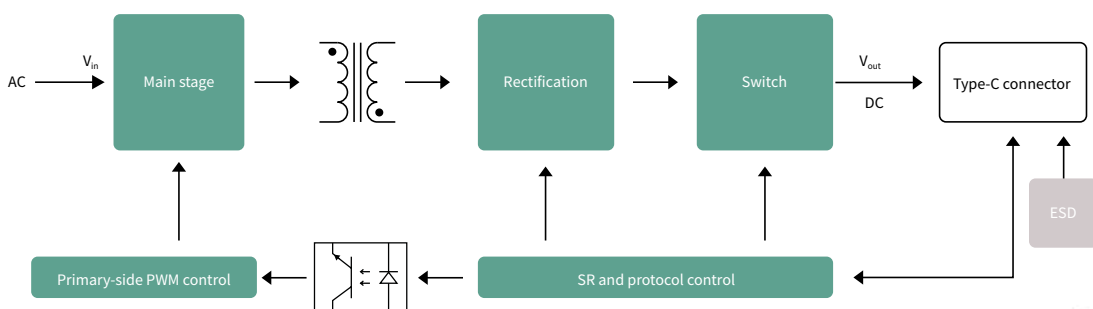

Right-fit portfolio for competitive design of laptop adapters

Manufacturing slimmer and lighter adapter requires ICs that enable high efficiency with good electromagnetic interference (EMI) performance and low standby power. There is also a need for cost-effective MOSFETs in small packages that feature good EMI and excellent thermal performance. Infineon offers a wide range of products specifically designed for adapters including high-voltage MOSFETs and control ICs for PFC and PWM stages, as well as low-voltage MOSFETs for synchronous rectification. With these products, Infineon supports the trend towards a significantly higher efficiency level, especially in partial load conditions, as well as the miniaturization of the adapter.

Extremely versatile are the CoolMOS™ P7 SJ MOSFET series and the latest body-diode performance-enhanced CoolMOS™ PFD7 series which combine high efficiency and optimized cost with ease of use. Infineon developed a family of packages, characterized by having a short lead, IPAK short lead with ISO-standoff and wide creepage that enable our customers' low-cost and reliable manufacturing, specifically for adapters. High power density at low manufacturing cost can be achieved by using Infineon's SOT-223 cost-effective package and ThinPAK 5x6 and 8x8 high-density SMD packages which enable SMT manufacturing while maintaining very good thermal performances. For synchronous rectification, Infineon's OptiMOS™ PD logic-level power MOSFET series offers extremely low on-state resistance and low capacitances.

The new control ICs such as the digital-based XDP™ controller enable forced-frequency-resonant zero-voltage-switching (FFR ZVS) operation, ideal in high-power-density adapter designs and supporting USB-PD requirements.

Infineon Type-C controllers are based on PSoC® 4 programmable system-on-chip architecture, which includes programmable analog and digital blocks, an Arm® Cortex®-M0 core and 32 KB of flash memory. This product family is driving the industry's first Type-C products with top-tier PC makers, enabling them to bring these USB Type-C benefits to market. Infineon has reference designs readily available for EMCA and dongle applications. These are available online and could be used to speed-up our customer's design cycle.

Multiple and often clunky chargers and adapters for phones, tablets, and laptops pose a nuisance for many users due to the additional weight and added space. That created a need and a trend towards higher power density and consequently smaller devices. Infineon's latest digital solutions enable a breakthrough concerning power density for adapter and charger systems enabling ~20 W/in³ power density systems (for 65 W maximum output power).

Infineon's 20 W/in³ adapter (cased) - 24 W/in³ (uncased) with 65 W output power capability (LxWxH: 74.2 mm x 36.5 mm x 16.5 mm)

SMPS

More efficient PC power supply

The PC power market is divided into high-end gaming PC and better cost-performance sectors to achieve a better price/performance for desktop SMPS. The PC OEMs are implementing the desktop SMPS by removing the AUX power block to save the cost of having a flyback circuit.

Due to the new structure of the CPU and GPU, higher and higher peak power is needed (1.5 to 2 times higher than normal power). In addition to the needed CCM PFC, Infineon 600 V CoolMOS™ P7 and OptiMOS™ 40 V / 60 V offer the best price/performance and reliability to meet the design requirements, as well as to achieve the highest efficiency enabled by semiconductors available in the market.

For that CPU and GPU power-hungry gaming PCs, the ICE3PCS0xG CCM PFC IC provides high efficiency over the whole load range and low count of external components, besides that, the ICE3PCS0xG CCM PFC IC offers fast output dynamic response during load jump. In addition to PGFC IC, Infineon’s LLC ICs ICE1HS01G/ICE2HS01G support customers to minimize the external component count.

SMPS

Highly efficient server power supply

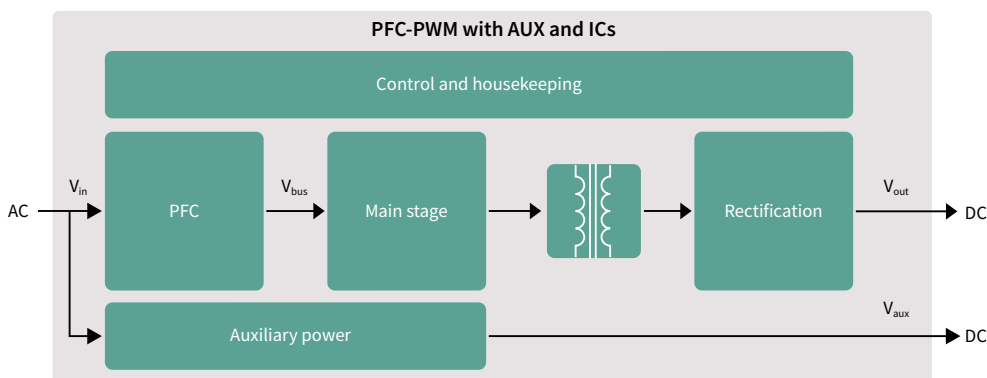

The trend in the field of data center and enterprise servers is to deliver more power per rack. Meanwhile, the rising cost of energy and environmental concerns make SMPS-efficiency optimization a key requirement across the entire load range for server and data center designs. This challenging task is combined with the requirement for higher power density and cost effectiveness.

In the PFC stage and generally in hard-switching topologies used in server applications, Infineon recommends its 600 V CoolMOS™ C7 and G7 families offering the lowest FOM $R_{DS(on)} * Q_G$ and $R_{DS(on)} * E_{oss}$. These MOSFET series provide the lowest switching losses, which is necessary in fast-switching-frequency operations in high-end server SMPS. With Infineon's C7 and G7 series, the efficiency is optimized already from a very light-load operation. 600 V CoolMOS™ C7 and G7 products are used with Infineon's industry-benchmark non-isolated 2EDN752x gate-driver IC family, and EiceDRIVER™ Compact 1ED-AF isolated driver family. Available in compact SMD packages such as ThinPAK, DDPak and TOLL, these SJ MOSFETs offer benefits in space usage and power density.

Complementary to the 600 V CoolMOS™ C7 in high efficiency PFC is the CoolSiC™ Schottky diodes. The 600 V CoolMOS™ P7 family offers a good compromise between price and performance. This is valuable in both PFC and HV DC-DC stages where low Q_G and turn-off losses are important benefits, especially in case of high-switching-frequency operation and high light-load efficiency requirements.

As high power (2-6 kW and above) require ultrahigh efficiency (96-98 percent peak) and high power density, Infineon's CoolGaN™ 600 V e-mode HEMTs family with totem-pole PFC controls deliver the highest efficiency and power density in the world. Using the 600 V CoolMOS™ S7 devices with active bridge circuit fulfills the Titanium® requirement at the lowest cost. Operating expenses (OPEX) and capital expenditures (CAPEX) are both reduced through simplified topologies and the power density in the server PSU is doubled.

In applications with low output voltage and high output current, further efficiency improvements are enabled by the continuous reduction of on-resistance. This can be achieved by using Infineon's low-voltage OptiMOS™ MOSFET series in the synchronous rectification stage. Infineon's low-voltage products are complemented by StrongIRFET™ devices that are optimized for lower switching frequencies and highest system robustness. Infineon's EiceDRIVER™ gate-driver IC family perfectly matches the CoolGaN™ and CoolSiC™ wide bandgap products, and CoolMOS™ and OptiMOS™ MOSFET products.

SMPS

Full system solution for telecom power supply

The ever increasing data consumption, coupled with new levels of virtualization and complexity of the 5G telecom infrastructure, is bringing its demanding requirements into the telecom power arena. The outstanding improvements made in telecom SMPS performance in the past decade have been primarily brought by the dramatic reduction of the on resistance achieved in high voltage MOSFETs, using the revolutionary superjunction principle. This principle was introduced by Infineon at the end of the nineties with the CoolMOS™ series.

To achieve the current demanding, flat energy efficiency targets, it has been increasingly popular to employ synchronous rectification utilizing the unique performance of medium-voltage OptiMOS™ power MOSFETs. OptiMOS™ power MOSFET family, which has gained terrific popularity in DC-DC brick solutions, coupled with gate-driver ICs and microcontrollers efficiently powers the BBUs, RRUs and AAUs of the macro and the small cells.

Infineon's wide bandgap technologies, such as CoolGaN™ 600 V (gallium-nitride-based) and CoolSiC™ 650 V (silicon-carbide-based) for primary side and upcoming CoolGaN™ 100 V/200 V* for synchronous rectification, complement the wide portfolio of silicon-based switches, enabling highest electrical conversion efficiency and robustness at attractive system costs. Infineon's EiceDRIVER™ gate driver IC family perfectly matches the CoolGaN™ and CoolSiC™ wide bandgap products, and CoolMOS™ and OptiMOS™ MOSFET products.

Fast EV charging

Advanced solutions for DC EV charging

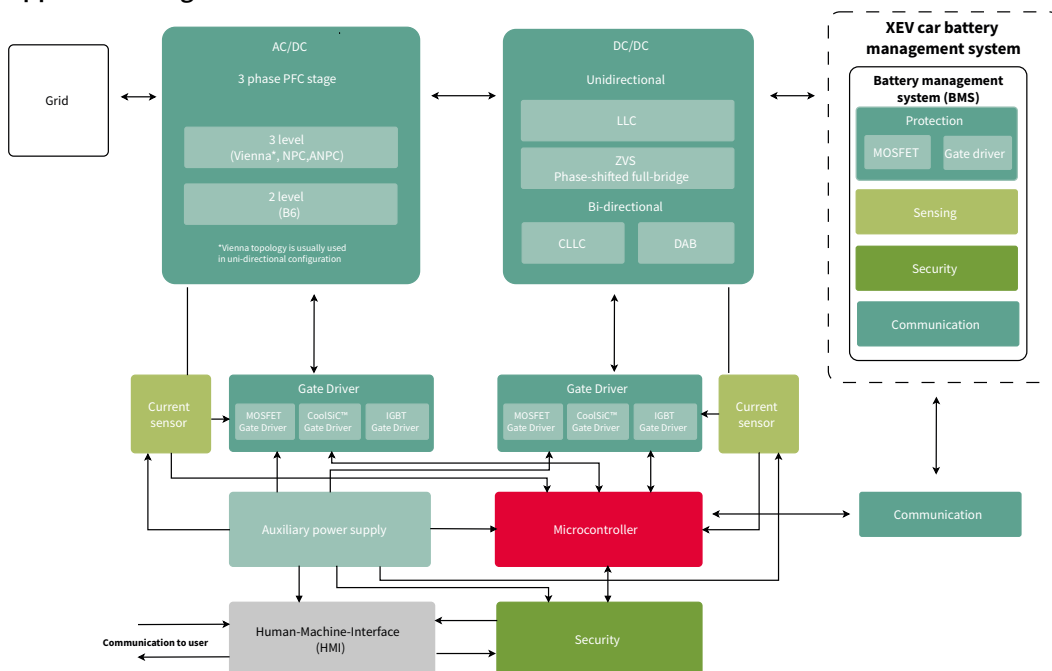

As e-mobility increasingly becomes part of daily life, there is a growing need for more efficient charging solutions. Fast electric vehicle (EV) charging stations equipped with powerful DC chargers are the answer. DC EV chargers are an attractive choice because they allow much faster charging than the standard AC EV ones that many EV owners have at home. Today, a DC charger with 150 kW can put a 200 km charge on an EV in around 15 minutes. As fast charging and battery technologies continue to evolve and improve in the near future, experts anticipate the charging time to drop even further.

As a market leader and the global front-runner in power electronics, Infineon enables you to bring energy-efficient DC EV charger designs to life, with our highly efficient components and in-depth technical support. We cover power ranges from kilowatts to megawatts in our broad portfolio of high-quality power semiconductors, microcontrollers, gate drivers, security, safety, and authentication solutions. Our CoolMOST™ and CoolSiC™ MOSFETs, together with EiceDRIVER™ gate drivers, for example, are ideal in a wide range of DC EV charging designs. Their matchless advantages include high-frequency operation, high power density and reduced switching losses, allowing you to reach high efficiency levels in any battery charging system.

Gate driver and galvanic isolation

Product category	Product family	Product	Additional information
Gate-driver ICs	EiceDRIVER™ (non-isolated)	1EDN family, 2EDN family	> Single-channel/dual-channel, non-isolated low-side gate driver ICs
		1ED4417xN01B	> Single-channel with fast, accurate (+/- 5%), integrated overcurrent protection (OCP)
		2ED24427N01F	> Dual-channel, 10 A low-side gate driver in DSO-8 package with power-pad > Integrated UVLO and enable (EN) function > Suitable for high frequency, high power operation w/BOM savings
	EiceDRIVER™ level-shift gate driver	2ED2184S06F 2ED2110S06M	> 650 V half-bridge gate driver for IGBTs and MOSFETs with SOI technology > Integrated bootstrap diode > High-frequency switching (500 kHz) and superior -VS transient voltage immunity
		IRS2186S, IRS21864S	> 600 V, 4 A high- and low-side gate driver
		IR2114SS, IR2214SS	> 600 V/1200 V half-bridge gate driver with DESAT, 2L SRC, soft-SD
		IR2213S	> 1200 V high- and low-side gate driver
	EiceDRIVER™ 2EDF/S isolated gate driver	2EDF7175F, 2EDF7275F	> Dual-channel functional isolated (1,5 kV)
		2EDS8265H, 2EDS8165H	> Dual-channel reinforced (safe) isolated (6 kV)
	EiceDRIVER™ Compact isolated gate driver	1EDI20I12MF, 1EDI20N12AF, 1EDI60N12AF, 1EDI60I12AF	> 1200 V single-channel, cost-effective functional isolated driver with Miller clamp / separate output
		1ED3122MU12H, 1ED3124MU12H, 1ED3125MU12F, 1ED3124MU12F	> 5.7 kV / 3 kV single-channel isolated driver with Miller clamp or separate output, UL 1577 certification
		1ED3491MU12M, 1ED3890MU12M	> 5.7 kV single-channel isolated driver with analog/digital configurability, DESAT, Miller clamp, and Soft-off, UL 1577 certification
EiceDRIVER™ Enhanced isolated gate driver	1ED020I12-F2, 2ED020I12-F2	> 1200 V, single-/dual-channel, functional isolated driver with DESAT and Miller clamp	

Current sensor

Product category	Product family	Product	Additional information
Magnetic current sensor	XENSIV™	TLI4971-A120T5-E0001	-
		TLI4971-A120T5-U-E0001	UL certified

Microcontroller

Product category	Product family	Product	Additional information
Microcontroller	XMC™	XMC1400 family (PFC stage)	Arm® Cortex® M0 based microcontroller
		XMC4500/XMC4700 (HV DC-DC/PWM stage)	Arm® Cortex® M4F based microcontroller
	AURIX™	TC26X/TC27X TC36X/TC37X	TriCore™ AURIX™ 32-bit microcontroller HSM (hardware secure module) full EVITA compliance

Internal power supply

Product category	Product family	Product	Additional information
AC-DC power conversion	CoolSET™ 5 QR/FF flyback	ICE5QR0680AG	800 V, 42 W, 710 mΩ, PG-DSO-12
		ICE5AR0680AG	800 V, 42 W, 710 mΩ, PG-DSO-12
	5 th generation PWM controllers and CoolMOS™ P7	ICE5QSBG and IPP80R360P7	800 V, 360 mΩ, TO-220
		ICE5QSBG and IPA95R450P7	950 V, 450 mΩ, TO-220 FP
	CoolMOS™ HV SJ MOSFETs	IPN95R1K2P7	950 V, 450 mΩ, SOT-223
IPN80R1K4P7		800 V, 1.4 Ω, SOT-223	
DC-DC power conversion	Low power LDOs	TLS805 / TLS810	50 mA/100 mA ultralow quiescent current linear voltage regulator with a wide input voltage range
		TLS202	150 mA LDO in a small-footprint package
		TLS203 / TLS205	300/500 mA low noise LDO
		TLS850B	500 mA wide input voltage LDO
	Buck converter	TLE8366E	1.9 A DC-DC buck converter
	Safety PMIC for AURIX™ MCU	TLF35584	Multichannel power supply IC, optimized for AURIX™ MCU, up to ASIL-D rated

Authentication and encryption

As embedded systems are increasingly becoming targets of attackers, Infineon offers OPTIGA™ - a turnkey security solution.

Product category	Product family	Product	Additional information
Security	OPTIGA™ Trust B	SLE95250000XTSA1	Asymmetric ECC authentication with individual certificate key pair and an extended temperature range of -40 to 110°C
	OPTIGA™ Trust TPM	SLB9670XQ2.0 *	Fully TCG TPM 2.0 standard compliant module with the SPI interface
	SLC37	SLC37ESA2M0, SLI97CSIFX1M00PE *	New class of performance and security cryptocontroller adhering to CC EAL6+ high targeted and EMVCo targeted certifications for payment and eSIM applications

Communication

Product category	Product family	Product	Additional information
CAN transceiver	Automotive CAN transceiver	TLE9250SJ	Automotive-grade high-speed CAN-FD transceiver with 5 Mbps, certified to ISO11898-5 in DSO-8 package
		TLE9250LE	Automotive-grade high-speed CAN-FD transceiver with 5 Mbps, certified to ISO1189-5 in TSON-8 package

E-mobility

Best solutions for electrified powertrain in XEV applications: on-board chargers, HV/LV DC-DC converter, wireless charging battery management

The electrification of the powertrain enables locally emission-free mobility and driving pleasure. The needed energy is stored and delivered from a battery. Infineon's semiconductor solutions do not only enable core functionalities in the electrification but also extend the driving range, reduce charging times and energy transfer between the high voltage systems with the traditional 12 V domain.

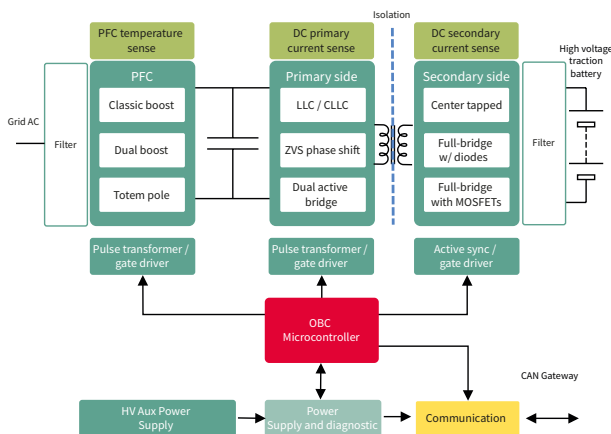

On-board chargers

Every plug-in hybrid electric vehicle (PHEV) and pure electric cars are equipped with at least one on-board charger, allowing battery recharge from any standard AC power outlet. Available power depends on regional regulations and installation base, typically providing up-to 7.4 kW for PHEVs and up-to 22 kW maximum power. System designers face the challenge of supporting the varied voltage and current levels while increasing the power density. When it comes to on-board charging, the key success factors involve efficiency and a high power density for a small form factor. The long-term trend is moving towards bidirectional charging, where the charger also feeds power from the car to the smart grid.

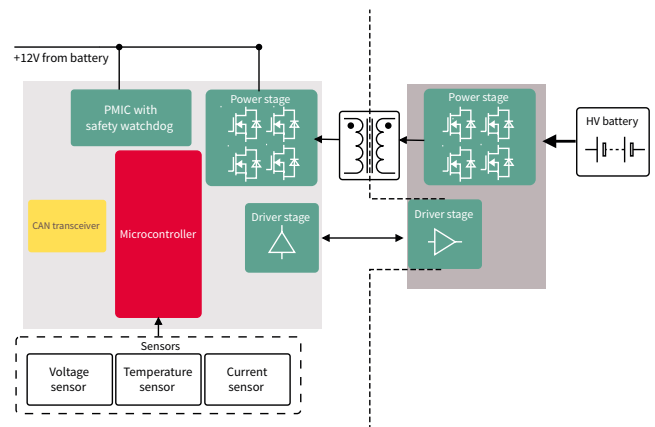

High-voltage DC-DC converter

The architecture of electric vehicles comprises at least one low-voltage sub-network with low-voltage energy storage and multiple electrical loads and one high-voltage sub-network with high-voltage energy storage. The auxiliary HV/LV DC-DC converter's function is to enable the bidirectional energy flow between these two electrical subnets. Typical design challenges are achieving the greatest-possible efficiency and keeping the overall system costs under control. The space required for the DC-DC converter should also be kept to an absolute minimum. Infineon's portfolio is specially designed to help easily overcome these barriers.

On-board chargers: functional blocks

HV/LV DC-DC converter: functional blocks

Product portfolio for on-board charger and HV/LV DC-DC applications

Infinion’s comprehensive portfolio of semiconductors (sensors, microcontrollers, power semiconductors, etc.) lends itself perfectly to designs of compact units for on-board, off-board, and wireless charging. Infineon products in this sector support high switching frequencies at lowest possible on-state resistance ($R_{DS(on)}$) to enable compact and efficient designs. The power offering includes MOSFETs such as CoolMOS™, IGBTs such as TRENCHSTOP™ 5 , SiC Schottky diodes such as the CoolSiC™ diode 650 V, the CoolSiC™ Hybrid discrete (integrated IGBT and SiC Diode) and Easy module solutions. In addition, integrated MOSFET and IGBT drivers, controller ICs for active CCM PFC high-performance microcontroller solutions and highly accurate current sensors complete the product portfolio. For more information about off-board chargers, refer to [Fast EV charging](#).

Automotive products for on-board units

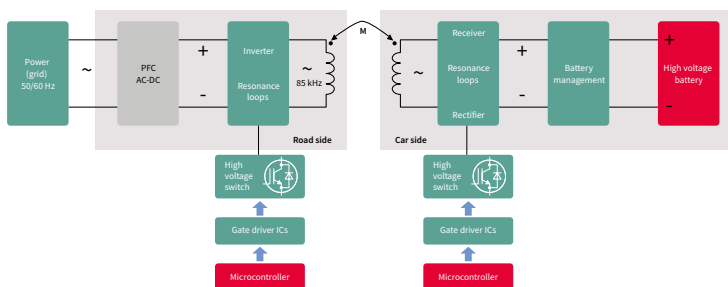

Part number	Product family	Description
CoolMOS™ 650 V	IPx65RxxxCFD7A	650 V MOSFET with integrated fast body diode
TRENCHSTOP™ 5 AUTO IGBT	AIKW50N, AIKW40N, AIGW40	IGBT discrete dedicated to automotive applications
CoolSiC™1200 V	AIMW120Rx	Automotive 1200 V discrete SiC MOSFET
Level shifter	AUIRS2191S , AUIRS2113S	Automotive high and low side driver
Automotive EiceDRIVER™	2ED02012FA	Dual-channel isolated driver for 650 V/1200 V IGBTs and MOSFETs
AURIX™ microcontroller	TC23xL, TC26xD, TX36x*, TC37X*	32-bit lockstep microcontroller
OPTIREG™ PMIC	TLF35584	ISO 26262 – system-supply optimized for AURIX™
CAN FD transceiver	TLE9250, TLE9251	High-speed automotive CAN transceiver with 5 Mbps
Automotive system basic chips	TLE9461, TLE9471	High integrated solution for microcontroller supply and communication
OPTIREG™ Linear	TLS810, TLS850, TLS105	Automotive linear voltage regulators
XENSIV™ current sensor	TLI4971	Coreless magnetic current sensors

Easy modules for on-board charger units

Part number	Product family	Description
CoolMOS™ Easy module 650 V	F4-35MR07W1D7S8_B11/A*	650 V MOSFET in H-bridge configuration with integrated capacitor in Easy 1B package
CoolMOS™ Easy module 650 V	F4-35MR07W2D7S8_B13/A*	650 V MOSFET in H-bridge configuration with IGBT H5, rapid diode & integrated capacitor in Easy 2B package
CoolMOS™ Easy module 650 V	F4-xxMR07WxD7_Bxx/A	650 V MOSFET in H-bridge configuration in Easy package
CoolMOS™ Easy module 650 V	FSxxMR07WxD7_Bxx/A	650 V MOSFET in SixPACK configuration in Easy package
CoolMOS™ Easy module 650 V	FFxxMR07WxD7_Bxx/A	650 V MOSFET in half-bridge configuration in Easy package
CoolSiC™ Easy module 1200 V	F4-xxMR12WxM1H_Bxx/A	1200 V SiC MOSFET in H-bridge configuration in Easy package
CoolSiC™ Easy module 1200 V	FSxxMR12WxM1H_Bxx/A	1200 V SiC MOSFET in SixPACK configuration in Easy package
CoolSiC™ Easy module 1200 V	FFxxMR12WxM1H_Bxx/A	1200 V SiC MOSFET in half-bridge configuration in Easy package

Wireless charging

Wireless methods for power transfer to charge the batteries of electric vehicles are gaining attention. Several concepts for wireless power transfer systems have been proposed, which in general seek to compensate the significant stray inductances on primary and secondary sides of the magnetic couplers by adaptive resonant methods. At the end of 2013, SAE announced a new standard for inductive charging which defined three power levels at 85 kHz. Infineon’s CoolMOS™ CFD7, C7, and P7 series along with TRENCHSTOP™ 5 IGBTs, CoolSiC™ diodes, and EiceDRIVER™ gate-driver ICs are perfectly suited for driving inductive power transfer systems on the road side which operate inside the 80 to 90 kHz band.

Light electric vehicles and forklift

e-bike, e-scooter, e-motorcycle, e-rickshaw, LSEV, e-forklift

Light electric vehicles (LEV) are increasingly becoming popular for daily commute. Started with Asia, now moving towards Europe and the Americas, the electrification of L-category (Light) vehicles (e-kick scooter, e-bike, e-scooter, e-motorcycle, e-rickshaw as well as low-speed electric vehicles (LSEV), also referred to as neighborhood EV (NEV)) are spotted all around the world. Using lithium batteries gives hardware overhaul to some of the existing designs built with lead-acid batteries. With the state-of-art battery technology, LEV manufacturers are launching premium vehicles requiring technologies that enable longer distance per charge, fast charge in various speed classes up to 100 km/hr. On the other hand, electric forklifts (class I, II, and III) function - unlike 2- and 3-wheelers and LSEVs - is to work with heavy load lifts.

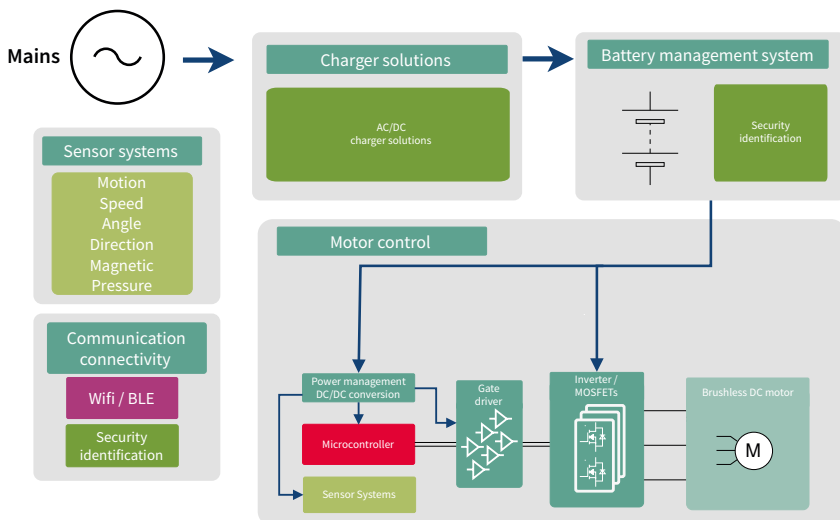

The faster the LEV and the higher load a LSEV or forklift has to carry, the stronger the motor and the motor controller have to be. This requires multiple best-in-class MOSFETs with lowest on-resistance gathering together in parallel to generate sufficient power.

Infineon's industrial-grade OptiMOS™ and StrongIRFET™ MOSFETs product families and EiceDRIVER™ gate drivers consider light electric vehicles' mission profile within its qualification process. They provide industry-leading on-resistance as well as robustness against critical conditions (short circuit conditions, hard commutation ruggedness, and instantaneous peak power tolerance). Both product families come with a broad range of voltage classes spreading from 25 V to 300 V with multiple $R_{DS(on)}$ classes to choose from. OptiMOS™ devices are designed for best performance in paralleling operation while StrongIRFET™ devices have great mix between performance and robustness.

Infineon offering and customer benefits

Infineon offering	Customer benefits
> Lowest on-resistance $R_{DS(on)}$	> Highest power density and BOM cost reduction
> Lowest power consumption during operation	> Increased battery operating time
> Track record of reliability and quality	> Prolonged lifetime
> Complete portfolio	> Enabled scalability
> Complete design support with simulations, documentation and demonstration boards for high end solution available	> Shortened development cycle

Infineon shapes power for growth through MOSFET innovation

With more than 40 years of experience in power MOSFET innovation, Infineon has led the way in solving the challenges design engineers face on a daily basis while enabling them achieve their targets. Although these targets may have changed over the years, the innovative spirit behind Infineon's product offering has persisted – from device design, technology, package and product development through manufacturing. Looking at the evolution of MOSFETs in the industry, numerous advancements in MOSFET technology have enabled the applications and trends that have become an indispensable part of our lives. Infineon power MOSFET innovation has proven that optimization at the component level brings significant system-level performance advantages and contributes to an easier, safer and greener future.

OptiMOS™ and StrongIRFET™

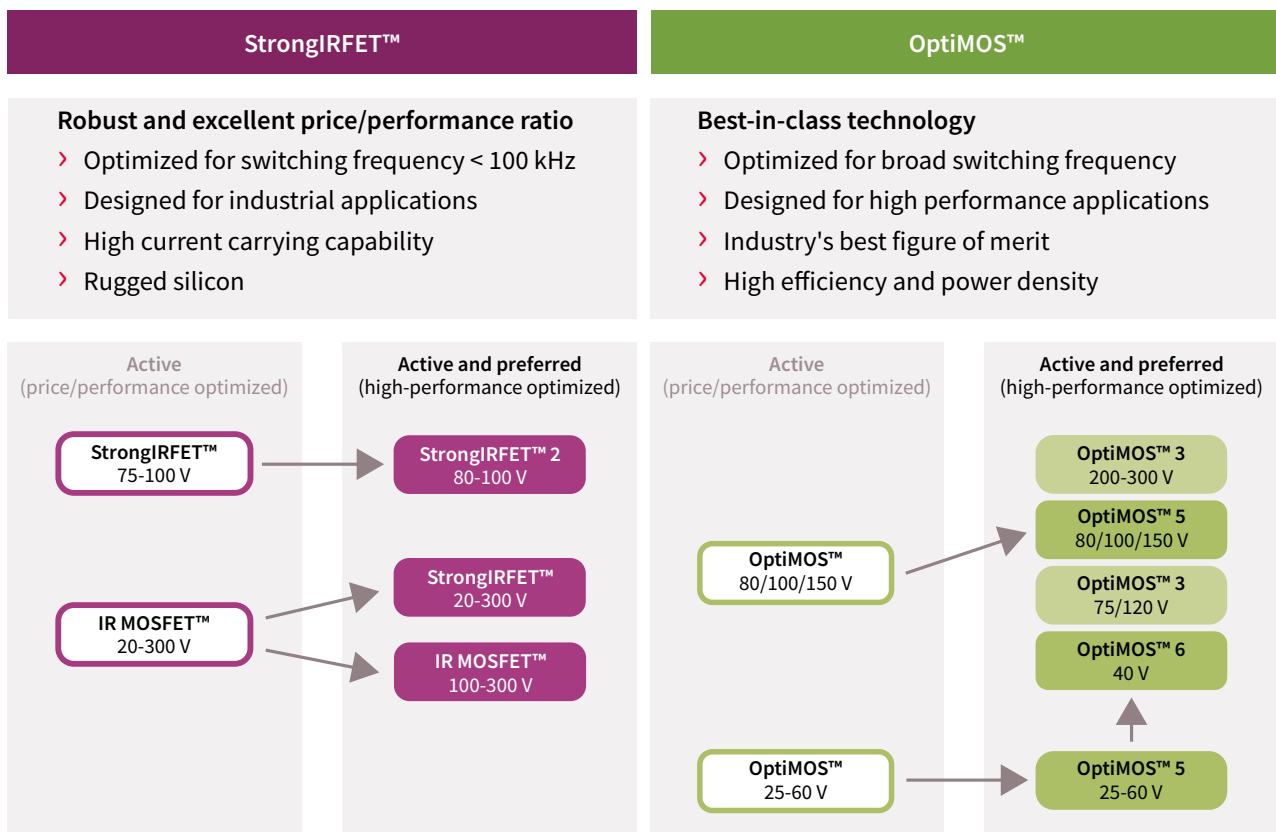

20-300 V N-channel power MOSFETs

Infiniteon's semiconductors are designed to bring greater efficiency, power density and cost-effectiveness. The full range of OptiMOS™ and StrongIRFET™ power MOSFETs enables innovation and performance in applications such as switch mode power supplies (SMPS), battery powered applications, motor control, drives, inverters, and computing.

Infiniteon's highly innovative OptiMOS™ and StrongIRFET™ families consistently meet the highest quality and performance demands in key specifications for power system designs such as on-state resistance ($R_{DS(on)}$) and figure of merit (FOM).

OptiMOS™ power MOSFETs provide best-in-class performance. Features include ultra low $R_{DS(on)}$, as well as low charge for high switching frequency applications. StrongIRFET™ power MOSFETs are designed for drives applications and are ideal for designs with a low switching frequency, as well as those that require a high current carrying capability.

Technology development and product family positioning

With more than 40 years of experience in power MOSFET innovation, Infineon offers a broad portfolio of products. The product portfolio is divided into “active and preferred”, referring to the latest technology available offering best-in-class performance, and “active”, consisting of well-established technologies which complete this broad portfolio.

StrongIRFET™ 2 power MOSFETs are the latest generation to be added to the family. Currently available in 80 and 100V options with additional voltages to be released later this year, this family offers broad availability and excellent price/performance ratio and are suitable for a broad range of applications.

OptiMOS™ 6 power MOSFETs 40 V are the newest addition to the OptiMOS™ product family. They are the perfect solution when best-in-class (BiC) products and high efficiency over a wide range of output power are required. For other voltage classes, from 25 V up to 150 V, OptiMOS™ 5 represents the latest generation in the market, offering low conduction losses and high switching performance.

For high and low frequency applications OptiMOS™ 3 power MOSFETs is our largest OptiMOS™ family and complements our existing product portfolio as well as providing additional options when best-in-class is not required. StrongIRFET™ is recommended for 20-300 V applications when the high performance is not essential and the cost is a more significant consideration.

Guidance for applications and voltage classes

OptiMOS™ and StrongIRFET™ portfolio, covering 20 up to 300 V MOSFETs, can address a broad range of needs from low to high switching frequencies. The tables below provide a guidance on the recommended OptiMOS™ or StrongIRFET™ products for each major sub-application and voltage class.

Discrete packages

Infineon has been making an impact in the MOSFET industry with innovation in MOSFET manufacturing techniques and processes as well as pioneering new packages to meet the changing demands of cutting-edge designs in various applications. OptiMOS™ and StrongIRFET™ technologies are available in different packages to address demands for high current carrying capability and significant space saving. The broad portfolio enables footprint reduction, boosted current rating and optimized thermal performance. While the surface mount leadless devices are enabled for footprint reduction, through-hole packages are characterized by a high-power rating.

Infineon offers innovative packages such as DirectFET™ and TO-Leadless. DirectFET™ is designed for high frequency applications by offering the lowest parasitic resistance. This package is available in three different can sizes: small, medium and large. TO-Leadless is optimized to dissipate power up to 375 W, increasing power density with a substantial reduction in footprint.

New package innovations include the SuperSO8 Source-Down package offering high power density and performance; the TOLG (Gullwing leads) optimized for TCoB (Thermal cycling on board) robustness; TOLT (top-side cooling) optimized for superior thermal performance; sTOLL optimized for high power in small form factor; and the SuperSO8 super cool optimized for dual-side cooling in a standard 5x6 mm² footprint.

Small signal/small power MOSFETs -250 to 600 V

Combining latest high-performance silicon technology with small and innovative packaging

Small-signal/small power products are ideally suited for space-constrained automotive and non-automotive applications. With an optimal price/performance ratio and small footprint packages, Infineon's small-signal and small-power MOSFETs are the best fit for a wide range of applications and circuits. These include low voltage drives, linear battery charger, battery protection, load switches, DC-DC converters, reverse polarity protection and many more.

The entire family includes different packages:

SOT-223, SOT-23, SOT-323, SOT-363, SOT-89, TSOP-6 and SC59

The product portfolio covers N-channel and P-channel enhancement mode MOSFETs as well as N-channel depletion mode products:

- > -250 V to -20 V P-channel enhancement mode (available in single and dual configurations)
- > 20 V to 600 V N-channel enhancement mode (available in single and dual configurations)
- > -20/+20 V and -30/+30 V complementary (P + N channel) enhancement mode
- > 60 V to 600 V N-channel depletion mode

Key features	Key benefits
> Products qualified to AEC Q101 and JEDEC Industrial standards	> Suitable for automotive and high quality demanding applications
> Four $V_{GS(th)}$ classes available for 1.8 V, 2.5 V, 4.5 V, and 10 V gate drives	> Easy interface to MCU
> ESD protected P-channel parts	> Reduction of design complexity
> V_{DS} range from -250 V to 600 V	> Wide selection of products available
> RoHS compliant and halogen free	> Industry standard small outline packages
	> Environmentally friendly

Small signal/small power MOSFETs are available in seven industry-standard package types ranging from the largest SOT-223 to the smallest SOT-363.

Products are offered in single, dual and complementary configurations and are suitable for a wide range of applications, including battery protection, LED lighting, low voltage drives and DC-DC converters.

	SOT-363	SOT-323	SOT-23	TSOP-6	SC59	SOT-89	SOT-223
Package outline [mm ²]	4.2	4.2	6.96	7.25	8.4	18	45.5

OptiMOS™ Source-Down power MOSFETs 25-150 V

An innovative PQFN 3.3 mm x 3.3 mm product family

Once again, Infineon is setting a new standard in MOSFET performance with the new Source-Down package to support the requirement for high power density and optimized system-level efficiency. In comparison with a normal Drain-Down device, in the Source-Down technology, the source potential is connected to the thermal pad. Optional Center-Gate footprint is also available. Here the gate-pin is moved to the center supporting easy parallel configuration of multiple MOSFETs. With the larger drain-to-source creepage distance, it is possible to connect the gates of multiple devices on a single PCB layer.

	Standard Drain-Down	New Source-Down	
			
	PQFN 3.3 x 3.3 standard Drain-Down footprint	PQFN 3.3 x 3.3 Standard-Gate Source-Down footprint	PQFN 3.3 x 3.3 Center-Gate Source-Down footprint
R_{thJC} [C/W]	1.8	1.4	1.4

Features and benefits

Key features
> Major reduction in $R_{DS(ON)}$, up to 30% due to larger silicon die in same package outline
> Improved R_{thJC} overcurrent PQFN package technology
> High power density
> Standard and Center-Gate footprint options

Key benefits
> Enabling highest power density and performance
> Superior thermal performance
> Form factor reduction
> Optimized layout possibilities
> Simplifying parallel configuration of multiple MOSFETs with Center-Gate footprints

Optimized thermal management

Drain-Down PQFN 3.3 x 3.3

Source-Down PQFN 3.3 x 3.3

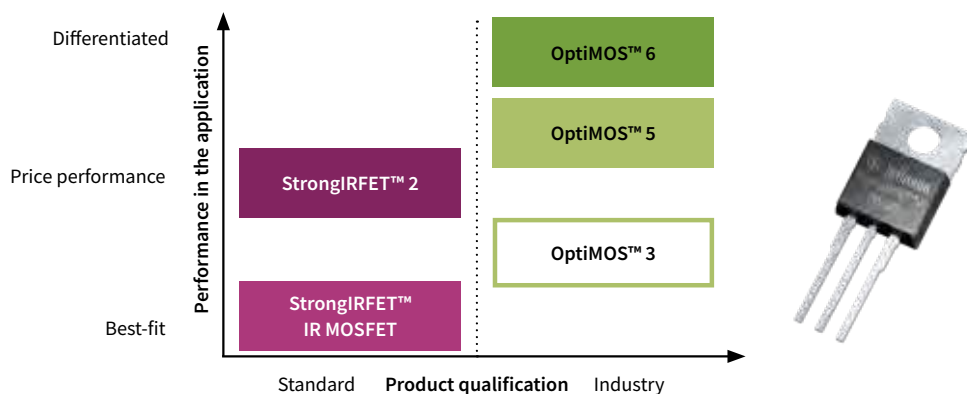

In the Source-Down package technology, the heat is dissipated directly into the PCB through a thermal pad instead of over the bond wire or the copper clip. The package significantly improves the thermal resistance (R_{thJC}) of this product family. In most cases, thermal vias cannot be used on the thermal pad if it is connected to the noisy switch node potential, with Source-Down, the thermal pad of the low-side MOSFET is now on the ground potential enabling the use of thermal vias right underneath the device. This considerably improves the thermal performance and the power density in the end application.

StrongIRFET™ 2 MOSFETs – 80 V/100 V

Right-fit products for a broad range of applications

The new StrongIRFET™ 2 power MOSFETs in the TO-220 package are the latest generation of MOSFET technology addressing a wide range of applications such as adapter, TV, motor drives, e-scooter, battery management, light electric vehicles, robotics, power and gardening tools. Featuring broad availability and excellent price/performance ratio, this new technology offers right-fit products with an easy choice for designers interested in convenient selection and purchasing. Optimized for both low and high switching frequencies, the family supports a broad range of applications enabling flexibility in design.

Features and benefits

Key features
> Broad availability from distribution partners
> Excellent price/performance ratio
> Ideal for high and low switching frequency
> Industry standard footprint
> High current rating

Key benefits
> Increased security of supply
> Right-fit products
> Supports wide variety of applications
> Standard pin out allows for drop-in replacement
> Increased product ruggedness

StrongIRFET™ 2 vs. previous generation 100 V performance comparison

Compared to the previous StrongIRFET™ generation in 100 V TO-220 package, StrongIRFET™ 2 shows significant improvements such as ~40 % lower $R_{DS(on)}$ and ~65% reduced Q_G . This results in better efficiency and longer life time.

TOLx family

Optimized for high power applications

TO-Leadless (TOLL)

TO-Leadless is optimized to handle currents up to 500 A, increasing power density with a substantial reduction in footprint. A footprint reduction of 30% compared to D²PAK, together with a height reduction of 50%, results in an overall space saving of 60% enabling much more compact designs.

Key features	Key benefits
<ul style="list-style-type: none"> Best-in-class technology High current rating > 500 A 60% space reduction compared to D²PAK 7-pin 	<ul style="list-style-type: none"> High performance capability High system reliability Optimized board utilization

Optimized for better TCoB robustness

TOLG (Gullwing leads)

TOLG package offers a compatible footprint to the TO-Leadless with the additional feature of Gullwing leads resulting in two times higher TCoB performances compared to TO-Leadless. This package is excellent on aluminum insulated metal substrate boards (Al-IMS).

Key features	Key benefits
<ul style="list-style-type: none"> Best-in-class technology High current rating > 450 A Low ringing and voltage overshoot 60% space reduction compared to D²PAK 7-pin Gullwing leads 	<ul style="list-style-type: none"> High performance capability High system reliability High efficiency and lower EMI Optimized board utilization High thermal cycling on board performance

Optimized for superior thermal performance

TOLT (Top-side cooling)

TOLT is the new top-side cooling package within the TOLx family. With top-side cooling, the drain is exposed at the surface of the package allowing for 95 percent of the heat to be dissipated directly to the heatsink, achieving 20 percent better R_{thJA} and 50 percent improved R_{thJC} compared to the TOLL package. With bottom-side cooling packages, like the TOLL or the D²PAK, the heat is dissipated via the PCB to the heatsink resulting in high power losses.

Key features	Key benefits
<ul style="list-style-type: none"> Low $R_{DS(on)}$ High current rating Top-side cooling Negative standoff 	<ul style="list-style-type: none"> Reduction in conduction losses Increased product ruggedness Superior thermal performance Minimize thermal resistance to heatsink

TOLx family – Cooling concept

With TOLL / TOLG, board mounting, the heat is dissipated through the PCB to the heatsink. Due to the PCB thermal resistance, power losses occur.

With top-side cooling setup, the drain pad is exposed on the top of the package allowing the majority of the heat to be dissipated into the top-mounted heatsink. This pulls heat away from the PCB resulting in at least 20 percent better R_{thJA} compared to standard over-molded TOLL.

Thermal cycling on board (TCoB) performance

CoolMOS™ SJ MOSFETs

Trusted leader in high voltage MOSFETs

The revolutionary CoolMOS™ power MOSFET sets new standards in the field of energy efficiency. Our CoolMOS™ products offer a significant reduction of conduction, switching and driving losses, and enable high power density as well as efficiency for superior power conversion systems.

High voltage superjunction MOSFETs address consumer applications, such as home appliance drives, smartphone/tablet chargers, notebook adapters, LED lighting, PC power, as well as audio and TV power supplies. Customers are increasingly replacing standard MOSFETs with superjunction MOSFETs to benefit from higher efficiency and lower power consumption for end users. CoolMOS™ P7 sets a new benchmark by offering high performance and competitive price all at once. CoolMOS™ PFD7 as brand new series is a state-of-the-art solution for high density chargers/adapters as well as home appliance drives (e.g., refrigerator compressors).

Also for industrial applications such as server, telecom, PC power, solar, UPS, EV-charging and others, Infineon's latest CoolMOS™ 7 superjunction MOSFETs with C7, G7, CFD7 and P7 product families offer what you need - from highest efficiency to best price performance. Complementary to the silicon CoolMOS™ portfolio, Infineon offers a broad wide bandgap (WBG) portfolio of CoolGaN™ e-mode HEMTs and CoolSiC™ MOSFETs to further optimize efficiency and system cost (see [Wide bandgap semiconductors](#)).

Infineon's industrial- and consumer-qualified CoolMOS™ superjunction MOSFET offering is complemented by the automotive qualified series 600 V CPA, 650 V CFDA, 800 V C3A and our latest 650 V CFD7A and 600 V S7A. Gain your momentum in the rapidly growing xEV market with our excellent performing automotive series addressing on-board charger, DC-DC converter, active pre-charge and discharge function, insulation monitor, HV eFuse and HV eDisconnect with proven outstanding quality standards that go well beyond AEC Q101.

950 V CoolMOST™ P7 SJ MOSFETs

Perfect fit for PFC and flyback topologies

Designed to meet the growing consumer needs in the high voltage MOSFETs arena, the latest 950 V CoolMOST™ P7 technology focuses on the low-power SMPS market. The P7 family addresses applications ranging from lighting, smart meter, mobile phone charger, notebook adapter, to AUX power supply and industrial SMPS. Offering 50 V more blocking voltage than its predecessor 900 V CoolMOST™ C3, the 950 V CoolMOST™ P7 series delivers outstanding performance in terms of efficiency, thermal behavior, and ease of use. As all other P7 family members, the 950 V CoolMOST™ P7 series comes with an integrated Zener diode ESD protection. The integrated diode considerably improves ESD robustness, thus reducing ESD-related yield loss and reaching exceptional ease-of-use levels. CoolMOST™ P7 is developed with a best-in-class threshold voltage ($V_{GS(th)}$) of 3 V and a narrow tolerance of only ± 0.5 V, which makes it easy to drive and design-in.

Compared to competition, the 950 V CoolMOST™ P7 delivers best-in-class efficiency and thermal performance. Plug-and-play at 90 V_{AC} in a 40 W adapter reference design, featuring the snubberless concept, demonstrates excellent efficiency gains of up to 0.2 % and lower MOSFET temperature of up to 5.2°C compared to similar competitor technology. With over 20 years of experience in superjunction technology, Infineon introduces 950 V CoolMOST™ P7 with best-in-class DPAK on-resistance ($R_{DS(on)}$). This SMD device comes with the $R_{DS(on)}$ of 450 mΩ - more than 60% lower $R_{DS(on)}$ compared to the nearest competitor. Such low $R_{DS(on)}$ value enables higher density designs while decreasing BOM and assembly cost.

Best-in-class DPAK $R_{DS(on)}$

Customer benefits:

- > Possible change from leaded to SMD packages
- > High power density
- > Lower BOM cost
- > Lower production cost

800 V CoolMOS™ P7 SJ MOSFETs

A benchmark in efficiency and thermal performance

With the 800 V CoolMOS™ P7 series, Infineon sets a benchmark in 800 V superjunction technologies and combines best-in-class performance with the remarkable ease of use. This product family is a perfect fit for flyback-based consumer and industrial SMPS applications. In addition, it is also suitable for PFC stages within consumer, as well as solar applications, fully covering the market needs in terms of its price/performance ratio.

The technology offers fully optimized key parameters to deliver best-in-class efficiency as well as thermal performance. As demonstrated on an 80 W LED driver, bought on the market, the >45 percent reduction in switching losses (E_{oss}) and output capacitance (C_{oss}) as well as the significant improvement in input capacitance (C_{iss}) and gate charge (Q_G), compared to competitor technologies, lead to 0.5 percent higher efficiency at light load which helps to reduce standby power in the end application. At full load, the observed improvement is up to 0.3 percent higher efficiency and 6°C lower device temperature.

EMI is a system level topic, and the optimization needs to be done on the system level only. Nevertheless, a pure plug-and-play measurement on Infineon's 45 W adapter reveals that 800 V CoolMOS™ P7 shows similar EMI performance to Infineon's previous technologies as well as to competitors' technologies.

Compared to competition, the 800 V CoolMOS™ P7 technology allows to integrate much lower $R_{DS(on)}$ values into small packages, such as a DPAK. This finally enables high power density designs at highly competitive price levels.

Overview of lowest DPAK $R_{DS(on)}$ for 800 V superjunction MOSFET

CoolMOS™ P7 sets a new benchmark in best-in-class DPAK $R_{DS(on)}$

Customer benefits:

- High power density
- Lower BOM cost
- Lower production cost

The complete P7 platform has been developed with an integrated Zener diode that is used as an electrostatic discharge (ESD) protection mechanism, which increases the overall device ruggedness up to human body model (HBM) class 2 level.

700 V CoolMOS™ P7 SJ MOSFETs

Our solution for flyback topologies

The 700 V CoolMOS™ P7 family has been developed to serve today's and, especially, tomorrow's trends in flyback topologies. The family products address the low power SMPS market, mainly focusing on mobile phone chargers and notebook adapters, but are also suitable for power supplies, used within lighting applications, home entertainment (TV, game consoles or audio), and auxiliary power supplies. 700 V CoolMOS™ P7 achieves outstanding efficiency gains of up to 4 percent and a decrease in device temperature of up to 16 K compared to the competition. In contrast with the previous 650 V CoolMOS™ C6 technology, 700 V CoolMOS™ P7 offers 2.4 percent gain in efficiency and 12 K lower device temperature, measured at a flyback-based charger application, operated at 140 kHz switching speed.

Keeping the ease of use in mind, Infineon has developed the technology with a low threshold voltage ($V_{GS(th)}$) of 3 V and a very narrow tolerance of ± 0.5 V. This makes the CoolMOS™ P7 easy to design-in and enables the usage of lower gate source voltage, which facilitates its driving and leads to lower idle losses. To increase the ESD ruggedness up to HBM class 2 level, 700 V CoolMOS™ P7 has an integrated Zener diode. This helps to support increased assembly yield, leads to reduction of production related failures and, finally, manufacturing cost savings on customer side.

Features and benefits

Key features
Highly performant technology
> Low switching losses (E_{oss})
> Highly efficient
> Excellent thermal behavior
> Allowing high speed switching
> Integrated protection Zener diode
> Optimized $V_{GS(th)}$ of 3 V with very narrow tolerance of ± 0.5 V
> Finely graduated portfolio

Key benefits
> Cost-competitive technology
> Further efficiency gain at higher switching speed
> Supporting less magnetic size with lower BOM costs
> High ESD ruggedness up to HBM class 2 level
> Easy to drive and design-in
> Enabler for smaller form factors and high power density designs
> Excellent choice in selecting the best fitting product

600 V CoolMOS™ P7 SJ MOSFETs

Perfect combination between high efficiency and ease of use

The 600 V CoolMOS™ P7 is a general purpose series, targeting a broad variety of applications, ranging from low power SMPS up to the highest power levels. In the low power arena, it is the successor of the 600 V CoolMOS™ CE, and for high power SPMS applications, it is the replacement for the 600 V CoolMOS™ P6, which makes it the perfect choice for applications such as chargers, adapters, lighting, TV and PC power supplies, solar, small light electric vehicles, server and telecom power supplies, and electric vehicle (EV) charging.

The 600 V CoolMOS™ P7 is Infineon's most well-balanced CoolMOS™ technology in terms of combining ease of use and excellent efficiency performance. Compared to its predecessors, it offers higher efficiency and improved power density due to the significantly reduced gate charge (Q_G) and switching losses (EOSS) levels, as well as optimized on-state resistance ($R_{DS(on)}$). The carefully selected integrated gate resistors enable very low ringing tendency and, thanks to its outstanding robustness of body diode against hard commutation, it is suitable for hard as well as soft switching topologies, such as LLC. In addition, an excellent ESD capability helps to improve the quality in manufacturing. The 600 V CoolMOS™ P7 family offers a wide range of on-resistance ($R_{DS(on)}$)/package combinations, including THD, as well as SMD devices, at an $R_{DS(on)}$ granularity from 24 to 600 mΩ and comes along with the most competitive price/performance ratio of all 600 V CoolMOS™ offerings.

600 V CoolMOST™ PFD7 SJ MOSFETs

The next level for ultrahigh power density designs and energy-efficient home appliance drives

The 600 V CoolMOST™ PFD7 MOSFET series sets a new benchmark in 600 V superjunction (SJ) technologies, shaped by Infineon's experience of more than 20 years in pioneering in superjunction technology innovation. The series combines best-in-class performance with state-of-the-art ease of use and features an integrated fast body diode ensuring a robust device and in turn reduced BOM for the customer. This product family offers up to 1.17 percent efficiency increase compared to the CoolMOST™ P7 technologies, which leads to a power density increase of 1.8 W/in³. CoolMOST™ PFD7 pushes the SJ MOSFET technology to new limits leading to outstanding improvement of lower conduction and charge/discharge losses as well as a reduced turn-off and gate-driving losses.

A broad range of $R_{DS(on)}$ values in combination with a variety of packages helps in selecting the right part to optimize designs. Furthermore, an integrated ESD protection of up to 2 kV eliminates ESD-related yield loss. At the same time, especially our industry-leading SMD package offering contributes to bill-of-material and PCB space savings and simplifies manufacturing. This unique set of product features and their resulting benefits, position the CoolMOST™ PFD7 superjunction MOSFET family exceptionally well for ultrahigh density applications like chargers and adapters, USB power delivery but also for home appliance drives (e.g. refrigerator compressors) and specific lighting SMPS applications.

600 V CoolMOST™ PFD7 increases efficiency in light- and full-load conditions. This results in a power density increase of 1.8 W/in³ for ultrahigh power chargers and adapters.

600 V CoolMOST™ PFD7 provides up to 2 percent higher efficiency at 100 W, which results in an 18°C thermal improvement. Its excellent commutation ruggedness makes it the perfect fit for low-power drives.

Features and benefits

Key features
> Very low FOM $R_{DS(on)} \times E_{oss}$
> Integrated robust fast body diode
> Ultra-low Q_{rr} and industry's fastest recovery time (T_{rr})
> Up to 2 kV ESD protection (HBM class 2)
> Wide range of $R_{DS(on)}$ values and broad package portfolio
> Excellent commutation ruggedness

Key benefits
> Minimized switching losses
> Power density improvement compared to latest CoolMOST™ charger technology
> Increased efficiency (especially at light-load operation) and improved thermal behavior compared to CoolMOST™ CE technology for home appliance motor drives
> BOM cost reduction and easy manufacturing
> Robustness and reliability
> Easy to select right parts for design fine-tuning

600 V and 650 V CoolMOS™ C7 and C7 Gold (G7) SJ MOSFETs

Infiniteon's superjunction MOSFET series for highest efficiency

The 600 V and 650 V CoolMOS™ C7 and C7 Gold (G7) superjunction MOSFET series are designed to achieve record level efficiency performance – they offer substantial efficiency benefits over the whole load range in hard switching applications compared to previous series and competition. This is achieved by minimizing switching losses via ultralow levels of switching losses (E_{oss}) (approximately 50 percent reduction compared to the CoolMOS™ CP), reduced gate charge (Q_G) and a careful balance of other relevant product key parameters. The low E_{oss} and Q_G also enable operation at higher switching frequency and related size reduction of the circuit magnetics.

The outstanding figures of merit (FOM) and the best-in-class on-state resistance ($R_{DS(on)}$) offerings make the CoolMOS™ C7 and C7 Gold series key enablers for highest efficiency and power density. While the 650 V CoolMOS™ C7 and G7 (C7 Gold) superjunction MOSFETs are solely designed for hard switching applications such as PFC, the 600 V version is also well suited for high-end LLC stages due to its rugged body diode that withstands slew rates up to 20 V/ns. The product portfolio contains TO-247 4-pin, ThinPAK 8x8, TO-Leadless and top-side cooled Double DPAK (DDPAK) packages which come with additional Kelvin source contacts enabling further efficiency advantages over the classical 3-pin approach.

Features and benefits

Key features
> Reduced switching loss parameters such as Q_G and C_{oss} , enabling higher switching frequency
> 50 percent E_{oss} reduction compared to older CoolMOS™ CP
> Suitable for hard switching topologies (650 V and 600 V)
> Suitable for high-end resonant (600 V only) topologies

Key benefits
> Increased efficiency in hard switching topologies such as PFC and TTF
> Reduced size and cost of magnetic components by increased switching frequency (e.g. 65 -130 kHz)
> Increased power density by smaller packages for the same $R_{DS(on)}$

PFC CCM 1200 W efficiency difference for 90 V_{Ac} (PFC CCM, 1.150 W @ 65 kHz)

600 V CoolMOST™ S7 SJ MOSFETs

The best price/performance SJ MOSFET for low frequency switching applications

The 600 V CoolMOST™ S7 superjunction MOSFET is the perfect fit for applications where MOSFETs are switched at low frequency, such as active bridge rectification, inverter stages, in-rush relays, PLCs, power solid state relay and solid state circuit breakers. The new MOSFET design, not being focused on switching losses, allows the CoolMOST™ S7 to offer cost-optimized, distinctively low on-resistance ($R_{DS(on)}$) values, ideally suited for applications looking to minimize conduction losses at the best price.

The CoolMOST™ S7 leads the way for power density, uniquely fitting a 22 mΩ $R_{DS(on)}$ chip into an innovative small TO-Leadless (TOLL) SMD package.

Use cases

Typically, CoolMOST™ S7 is used in active rectification bridges, where diodes are replaced or paralleled with MOSFETs, obtaining an increase in efficiency without the need for extensive system redesign. In this application, the TO-leadless (TOLL) package in low $R_{DS(on)}$ allows the most efficient and compact modular design based on daughter cards. The CoolMOST™ S7 delivers also tremendous value to solid state relay (SSR) and solid state circuit breaker (SSCB) designs, by bringing the superjunction MOSFET advantages to a system level cost comparable to silicon alternatives. In addition, any socket or topology switching at low frequency can greatly benefit from the leading low $R_{DS(on)}$ x price.

Features and benefits

Key features
> Best-in-class $R_{DS(on)}$ in SMD packages
> Optimized for conduction performance, reaching the lowest $R_{DS(on)}$ values
> High pulse current capability
> Improved thermal resistance

Key benefits
> Minimizes conduction losses
> An easy step into Titanium level SMPS
> Modular, more compact and easier designs
> Eliminates or reduces heat sink in solid state relays and circuit breakers
> Lower TCO cost or BOM cost

Efficiency in 2400 W PFC at $V_{in} = 230 V_{AC}$ Difference between using or not using the active bridge rectification

CoolMOST™ S7 brings more efficiency to power supplies when used in an active rectification bridge.

3 kW GaN based totem pole PFC efficiency calculation with and without synchronous rectification when $V_{in} = 230 V_{AC}$, $V_{out} = 400 V$, $f_{sw} = 65 kHz$

CoolMOST™ S7 is the perfect complement for CoolSiC™ MOSFETs and CoolGaN™ e-mode HEMTs in totem pole PFC topologies.

600 V CoolMOS™ CFD7 SJ MOSFETs

Infiniteon's solution for resonant switching high power applications

The 600 V CoolMOS™ CFD7 is one of Infineon's high voltage superjunction MOSFET series with an integrated fast body diode. It is the ideal choice for resonant topologies, such as LLC and ZVS PSFB, and targets the high SMPS market.

As a result of significantly reduced gate charge (Q_G), improved turn-off behavior, a reverse recovery charge (Q_{rr}) of up to 69 percent lower compared to the competition, as well as the lowest reverse recovery time (t_{rr}) in the market, it combines the highest efficiency and best-in-class reliability in soft switching applications, without sacrificing the easy implementation in the design-in process.

In addition, the 600 V CoolMOS™ CFD7 enables higher power density solutions by offering the best-in-class on-state resistance ($R_{DS(on)}$) package combinations in through-hole devices, as well as in surface mount devices. In ThinPAK 8x8 and TO-220 with CoolMOS™ CFD7, a $R_{DS(on)}$ of around 30 percent below the next best competitor offering can be achieved. All this together makes CoolMOS™ CFD7 the perfect fit for server and telecom applications, and it is also suitable for EV-charging stations.

Features and benefits

Key features
> Ultrafast body diode
> Best-in-class reverse recovery charge (Q_{rr})
> Improved reverse diode dv/dt and dif/dt ruggedness
> Lowest figure of merit ($R_{DS(on)} \times Q_G \times E_{oss}$)
> Best-in-class $R_{DS(on)}$ /package combinations

Key benefits
> Best-in-class hard commutation ruggedness
> Highest reliability for resonant topologies
> Highest efficiency with outstanding ease of use/performance trade-off
> Enabling increased power density solutions

650 V CoolMOS™ CFD7 SJ MOSFETs

Tailored to win in resonant topologies

The need for improved efficiency and higher power density in industrial SMPS applications is driven by the megatrends of the 21st century such as big data, digitalization and e-mobility. Furthermore, over the last few years, due to the higher nominal input voltages in the US, a trend towards 450 V bus voltage, and the need for worldwide applicable designs, the demand for 650 V breakdown voltage has increased significantly - also for resonant topologies.

The 650 V device family is the voltage-range extension of Infineon's renowned CoolMOS™ CFD7 family, the successor to the well-established CoolMOS™ CFD2. It comes along with an additional 50 V breakdown voltage, integrated fast body diode, improved switching performance (compared to previous generations), and excellent thermal behavior. Thanks to these features, the 650 V CoolMOS™ CFD7 allows for the highest efficiency and power density levels in soft-switching applications such as LLC and ZVS phase-shift-full-bridge.

The best-in-class $R_{DS(on)}$ in TO-247, TO-220, and D²PAK enables customers to increase the power density level of their designs primarily addressing telecom, server, solar, and (off-board) EV-charging applications.

Features and benefits

Key features	Key benefits
> 650 V blocking voltage	> 50 V extra margin for increased bus voltage
> Ultrafast body diode	> Excellent hard commutation ruggedness
> Reduced switching losses	> Outstanding light load efficiency
> Low $R_{DS(on)}$ dependency over temperature	> High full load efficiency

CoolMOST™ CE SJ MOSFETs

High voltage superjunction MOSFETs for consumer applications

Infiniteon's CoolMOST™ CE is a product family that addresses consumer and lighting applications. It offers benefits in efficiency and thermal behavior versus standard MOSFETs and is optimized for ease of use and cost-competitiveness, while delivering the right fit performance and excellent Infineon quality.

Application example: 10 W and 15 W smartphone charger

CoolMOST™ CE meets typical MOSFET case temperature requirements in charger applications

CoolMOST™ CE case temperature:

The maximum MOSFET case temperature is required to be below 90°C. CoolMOST™ CE meets this requirement and offers enough margin required for design-in flexibility.

CoolMOST™ CE meets the standard efficiency requirements in charger application

CoolMOST™ CE efficiency performance:

CoolMOST™ CE meets the 80 percent standard efficiency requirement and offers enough margin required for design-in flexibility.

10 W design: IPS65R1K5CE
EN 55022 B radiated HF-field
30 MHz – 1 GHz position

15 W design: IPS65R1K0CE
EN 55022 B radiated HF-field
30 MHz – 1 GHz position

The performance of CoolMOST™ CE in the 10 W and 15 W design demonstrates that the series meets common EMI requirements for charger applications and thus, is also offering design-in flexibility.

CoolMOST™ CE customer benefits

Product portfolio	We offer a broad portfolio covering five voltage classes in both through-hole and SMD packages
Quality	Our field failure rates are as low as 0.1 DPM
Design-in support	We have a large field application engineering team to provide professional and flexible support for your design

CoolMOST™ SJ MOSFETs for automotive

600 V CoolMOST™ CPA, 650 V CoolMOST™ CFDA, 800 V CoolMOST™ C3A, 650 V CoolMOST™ CFD7A – on the fast lane in automotive applications

The highest system performance in a size and weight constrained environment, outstanding and proven product quality and reliability, as well as 100 percent reliable delivery, are the needs of our automotive customers. With the high voltage automotive MOSFET series 600 V CoolMOST™ CPA and 650 V CoolMOST™ CFDA, 800 V CoolMOST™ C3A and 650 V CoolMOST™ CFD7A, Infineon is perfectly prepared to take the challenges in the strongly growing automotive market.

Product series	Key features	Applications	Quality

CoolMOST™ SJ MOSFET automotive – benchmark in quality and reliability

Robustness validation – example for thermal cycling test

Focus on top-notch quality and reliability without any compromise – that is the principle Infineon applies during development and qualification of all CoolMOST™ superjunction technologies. For our automotive grade derivatives, the great quality levels of the industrial base technologies are further boosted by special screening measures in front- and back-end, as well as by extended qualification procedures. The Infineon robustness validation approach with extended stress-test procedures, doubling the real application requirements, is one of our key measures to ensure a

quality level well beyond the formal requirements of the AEC Q101 standard. Aside from extended stress times on standard qualification tests, it comprises test procedures, specially developed by Infineon to ensure highest quality of e.g., the power metallization of our devices. Usage of robust package technologies, 100 percent gate oxide screening, and top-notch production monitoring, including yield screening measures, part average testing (PAT), statistical bin alarm (SBA), and pattern recognition procedures, complete our package to guarantee highest automotive quality. This holistic approach results in an unrivalled quality position of our 600 V CoolMOST™ CPA and 650 V CoolMOST™ CFDA, 800 V CoolMOST™ C3A and the new 650 V CoolMOST™ CFD7A.

CoolMOS™ SJ MOSFET automotive – ready to support future application trends

Driven by the carbon dioxide (CO₂) reduction initiatives, the market of plug-in hybrid PHEV and pure EV is strongly growing. Higher ranges of the electric vehicles are realized by increasing the battery capacity and the energy efficiency of the used electric components. The used battery voltage classes tend to become standardized at approximately 450 V with a trend towards the higher voltages, as this supports faster charging times and enables lighter cabling within the vehicle. Discrete high voltage components are widely used for on board charger (OBC) and DC-DC converter (LDC) applications, as price pressure increasingly displaces module-based solutions. The trend towards fast charging impacts on the power range demanded from OBC topologies. Presently, as well as in the past, a vast majority of OBC topologies have been found in the range up to 7.2 kW, whereas the future tends to stir the trend towards 11 kW or even up to 22 kW. This development, paired with a demand for high efficiency and power density at low system cost, is a strong driver for the usage of three-phase solutions.

Classic PFC stage for OBC

OBC Vienna rectifier for three-phase PFC in OBC

While for the lower power OBC solutions classic PFC approaches are the well-established approaches in the market, the Vienna rectifier is the optimal solution for the higher power levels. As a true three-phase topology, it delivers full power if attached to a three-phase input but is flexible enough to run on a single-phase if required. The three-level topology minimizes the filter effort compared to other solutions. By using the doubled frequency on the magnetic components, it also helps to significantly reduce the size of the passives. As a three-level topology, the Vienna rectifier, followed by two paralleled DC-DC stages, furthermore leads to a relaxed voltage stress level on the power MOSFETs. This way, it enables to handle upcoming higher battery voltage levels. The $R_{DS(on)}$, required to yield a desired efficiency level in a Vienna Rectifier, is a function of applied switching frequency and demanded power level. With our 600 V CoolMOS™ CPA and 650 V CoolMOS™ CFDA portfolio, covering an $R_{DS(on)}$ range from 45 to 660 mΩ, we are well prepared to support your next generation three-phase Vienna rectifier design. With CoolMOS™ you are ready to seize your share in the emerging high-power on-board charger markets.

600 V CoolMOST™ S7A

Best-in-class $R_{DS(on)}$ * A SJ MOSFET for slow switching automotive applications

The new automotive-grade 600 V CoolMOST™ S7A superjunction MOSFET addresses xEV applications where MOSFETs are switched at low frequency, such as HV eFuse, HV eDisconnect, and on-board charger in the slow-switching leg of the PFC stage. The more stringent requirements for increased power density, safety, and reliability in these applications are met by combining the superior robustness and performance of the S7A MOSFET with the innovative package concept offered by the QDPAK TSC. The new MOSFET design offers a cost-optimized, distinctively low on-resistance $R_{DS(on)}$ of 10 mΩ, enabling increased power density and minimized conduction losses. The top-side cooled QDPAK package offers increased efficiency and controllability thanks to its' intrinsic Kelvin source, high power dissipation capability, and innovative cooling concept.

An efficiency improvement of +0.5% and a reduction in power losses of -30% can be achieved in a classic boost PFC topology for OBC by replacing the diode bridge with the S7A in an ALR active line rectification.

CoolMOST™ S7A is the semiconductor solution for HV eDisconnect and HV eFuse. It answers eMobility needs with respect to reliability (maintenance-free), flexible and cost-optimized system integration, scalability, and minimized failure propagation

Component battery architecture representation

Features and benefits

Key features
› Best-in-class $R_{DS(on)}$: 10 mΩ
› Smallest $R_{DS(on)}$ in SMD packages
› Optimized for conduction performance
› Improved thermal resistance
› High pulse current capability
› Body diode robustness at AC line commutation
› Kelvin-source concept

Key benefits
› Minimized conduction losses
› Increased energy efficiency
› More compact and easier designs
› Increased power density
› Lower TCO cost or BOM cost
› Flexible system integration
› Variable cooling strategy

CoolMOS™ SJ MOSFET high power package innovations

Space-saving and high performance packages

An SMD package for high efficiency and controllability in automotive applications

TO-263-7 (D²PAK-7-pin)

The TO-263-7-pin package is a SMD package addressing automotive-specific requirements including high efficiency and controllability. The Kelvin source pin leads to reduced switching losses. Furthermore, the new 7-pin design increases the creepage distance at the PCB and therefore helps to improve the manufacturability.

Innovative top-side cooled SMD solution for high power applications

Top-side cooled Double & Quadruple DPAK (DDPAK + QDPAK)

These top-side cooled surface mount device (SMD) packages address high power SMPS applications such as PC power, solar, server and telecom as well as automotive applications like HV eDisconnect, HV eFuse and on-board charger. SMD-based SMPS designs support fast switching and help to reduce the parasitic inductance associated with long leaded packages such as the common TO-220 & TO-247 package. In today's SMD-based designs, the output power is restricted by the thermal limit of the PCB material because the heat must be dissipated through the board. Thanks to the top-side cooling concept of DDPAK & QDPAK, the thermal decoupling of board and semiconductor is possible, enabling higher power density or improved system lifetime.

For highest efficiency and controllability in high power SMPS markets

TO-247 4-pin with asymmetric leads

The TO-247 4-pin package with asymmetric leads is an optimized version of the standard TO-247 4-pin and enables highest efficiency and controllability in the high power SMPS market. The fourth pin acts as a Kelvin source. The main current of the switch is placed outside of the gate loop and the feedback is eliminated. This leads to less switching losses, especially at high currents. Secondly, the EMI will be reduced due to cleaner waveforms. In addition, the asymmetric leads further improve the ease of use in the design-in process. Compared to the standard TO-247 4-pin the distance between the critical pins has been increased to enable simplified wave soldering and reduced board yield loss.

Enabling significant space savings

ThinPAK 8x8

With a very small footprint of only 64 mm² (vs. 150 mm² for the D²PAK) and a very low profile with only 1 mm height (vs. 4.4 mm for the D²PAK) the ThinPAK 8x8 leadless SMD package for high voltage MOSFETs is a first choice to decrease system size in power-density driven designs. Low parasitic inductance and a separate 4-pin Kelvin source connection offer best efficiency and ease of use. The package is RoHS compliant with halogen-free mold compound.

Optimized for high power applications

TO-Leadless

Combined with the latest CoolMOS™ C7 Gold (G7) technology, the TO-Leadless (TOLL) package is Infineon's flagship SMD package for high power/high current SMD solutions. Compared to D²PAK 7-pin, TO-Leadless shows a 30 percent reduction in footprint, yet offers improved thermal performance. This and the 50 percent height reduction result in a significant advantage whenever highest power density is demanded. Equipped with 4-pin Kelvin source connection and low parasitic inductances the package offers best efficiency and ease of use. The package is MSL1 compliant and reflow solderable.

CoolMOS™ SJ MOSFET low power package innovations

Addressing today's consumer needs

Cost-effective drop-in replacement for DPAK

SOT-223

The SOT-223 package without middle pin is a cost-effective alternative to DPAK, addressing the need for cost reductions in price sensitive applications. It offers a smaller footprint, while still being pin-to-pin compatible with DPAK, thus, allowing a drop-in replacement for DPAK and second sourcing. Moreover, SOT-223 achieves comparable thermal performance to DPAK and enables customers to achieve improved form factors or space savings in designs with low power dissipation.

Solution for slim and small adapters and chargers

ThinPAK 5x6

ThinPAK 5x6 reduces the PCB area by 52 percent and height by 54 percent when compared to the DPAK package which is widely used in chargers and adapters. ThinPAK 5x6 is the right device to replace DPAK and meet the market demands of slimmer and smaller designs. Also, ThinPAK 5x6 enables a reduced charger and adapter case hot spot temperature by increasing the space between the MOSFET and the charger and adapter case.

Solution for height reduction in adapters and chargers

TO-220 FullPAK Narrow Lead

Infineon's TO-220 FullPAK Narrow Lead addresses customer needs with regards to height reduction requirements in adapter and charger applications. By offering an optimized standoff width and height and improved creepage distance, the package can be fully inserted into the PCB without any production concerns and, therefore, is especially suitable for slim and semi-slim adapter solutions.

Improved creepage distance for open frame power supplies

TO-220 FullPAK Wide Creepage

This package solution has an increased creepage distance between the pins to 4.25 mm compared to 2.54 mm of a TO-220 FullPAK package. It targets open frame power supplies such as TV sets and PC power, where dust can enter the case through air vents. Dust particles can reduce the effective creepage between pins over time, which may lead to high voltage arcing. The package meets the requirements of open frame power supplies without any additional measures. Thus, it reduces system cost by offering an alternative to frequently used approaches to increase creepage distance.

Applications

20-300 V MOSFETs

500-950 V MOSFETs

WBG semiconductors

Discrete IGBTs and silicon power diodes

Power ICs

Intelligent switches and input ICs

Gate-driver ICs

Microcontrollers

XENSIV™ sensors

Packages

Wide bandgap semiconductors

Gallium nitride (GaN) and silicon carbide (SiC)

The key to the next essential step towards an energy-efficient world is the use of new materials, such as wide bandgap semiconductors that allow for greater power efficiency, smaller size, lighter weight, lower overall cost – or all of these together. As the leading and trusted power supplier, Infineon is offering the broadest product and technology portfolio of silicon (Si) and wide bandgap (WBG) solutions with more than 40 years of heritage in silicon, and several decades of heritage in wide bandgap technology development.

CoolGaN™ – ultimate efficiency and reliability

Compared to silicon (Si), the breakdown field of Infineon's CoolGaN™ enhancement mode (e-mode) HEMTs is ten times higher and the electron mobility is double. Both the output charge and gate charge are ten times lower than with Si and the reverse recovery charge is almost zero which is key to high-frequency operations. GaN is the best-suited technology in hard-switching as well as resonant topologies, and is enabling new approaches in current modulation. Infineon's GaN solution is based on the most robust and performing concept in the market – the enhancement-mode concept - offering fast turn-on and turn-off speed. CoolGaN™ products focus on high performance and robustness, and add significant value to a broad variety of systems across many applications such as server, telecom, hyperscale data centers, wireless charging, adapter/charger, and audio. CoolGaN™ switches are easy to design-in with the matching EiceDRIVER™ gate driver ICs optimized for CoolGaN™ 600 V from Infineon.

CoolSiC™ - revolution to rely on

Silicon carbide (SiC) has a wide bandgap of 3 electronvolts (eV) and a much higher thermal conductivity compared to silicon. SiC-based MOSFETs are best-suited for high-breakdown, high-power applications that operate at higher frequencies compared to traditional IGBTs. CoolSiC™ MOSFETs come along with a fast internal freewheeling diode, thus making hard commutation without additional diode chips possible. Due to its unipolar character, the MOSFETs show very low, temperature-independent switching and low conduction losses, especially under partial load conditions. Based on proven, high-quality volume manufacturing, Infineon's silicon carbide solutions combine revolutionary technology with benchmark reliability – for our customers' success today and tomorrow. The offering is completed by EiceDRIVER™ SiC MOSFET gate driver ICs based on Infineon's successful coreless transformer technology.

CoolGaN™ e-mode HEMTs

Tailor-made for the highest efficiency and power density in switch-mode power supplies

In comparison to the next best silicon alternative, CoolGaN™ enables higher power density and the highest efficiency, especially in the partial load range, through novel topologies such as the CCM totem-pole PFC stage. GaN e-mode HEMT performance features a low reverse recovery charge and excellent dynamic performance in reverse conduction compared to silicon FET solutions. This enables more efficient operation at established frequencies and much higher frequency operation, improving power density by shrinking the size of passive components. CoolGaN™ enables doubled output power in a given energy storage slot size, freeing up space and realizing higher efficiency at the same time. Infineon's CoolGaN™ comes with industry-leading reliability. During the quality management process, it is not only the device that is thoroughly tested but also its behavior in the application environment. The performance of CoolGaN™ goes beyond other GaN products in the market.

Features

- › Low output charge and gate charge
- › No reverse recovery charge

Design benefits

- › High power density, small and light design
- › High efficiency in resonant circuits
- › New topologies and current modulation
- › Fast and (near-)lossless switching

Advantages

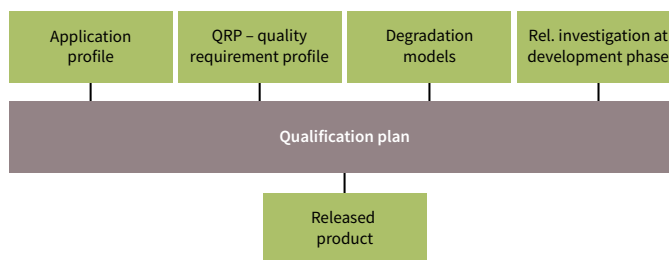

- › Operational expenses (OPEX) and capital expenditure (CAPEX) reduction
- › BOM and overall cost savings

Infineon leverages its unique portfolio of high- and low-voltage MOSFETs, gate-driver ICs and digital controllers to complement its CoolGaN™ product line, thus enabling full exploit for GaN benefits.

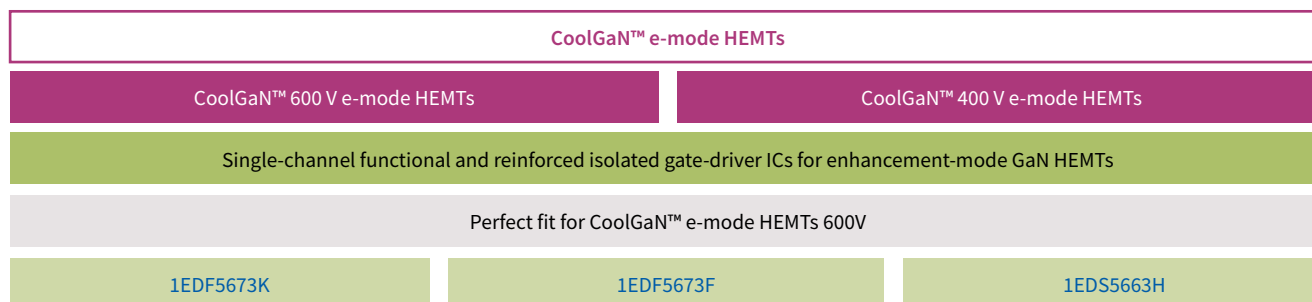

The highest quality

The qualification of GaN switches requires a dedicated approach, well above existing silicon standards

- › Infineon qualifies GaN devices well beyond industry standards
- › Application profiles are an integral part of the qualification process
- › Failure models, based on accelerated test conditions, ensure target lifetime and quality are met
- › Infineon sets the next level of wide bandgap quality

CoolGaN™ e-mode HEMTs overview

For more details on the product, click on the part number or contact our [product support](#).

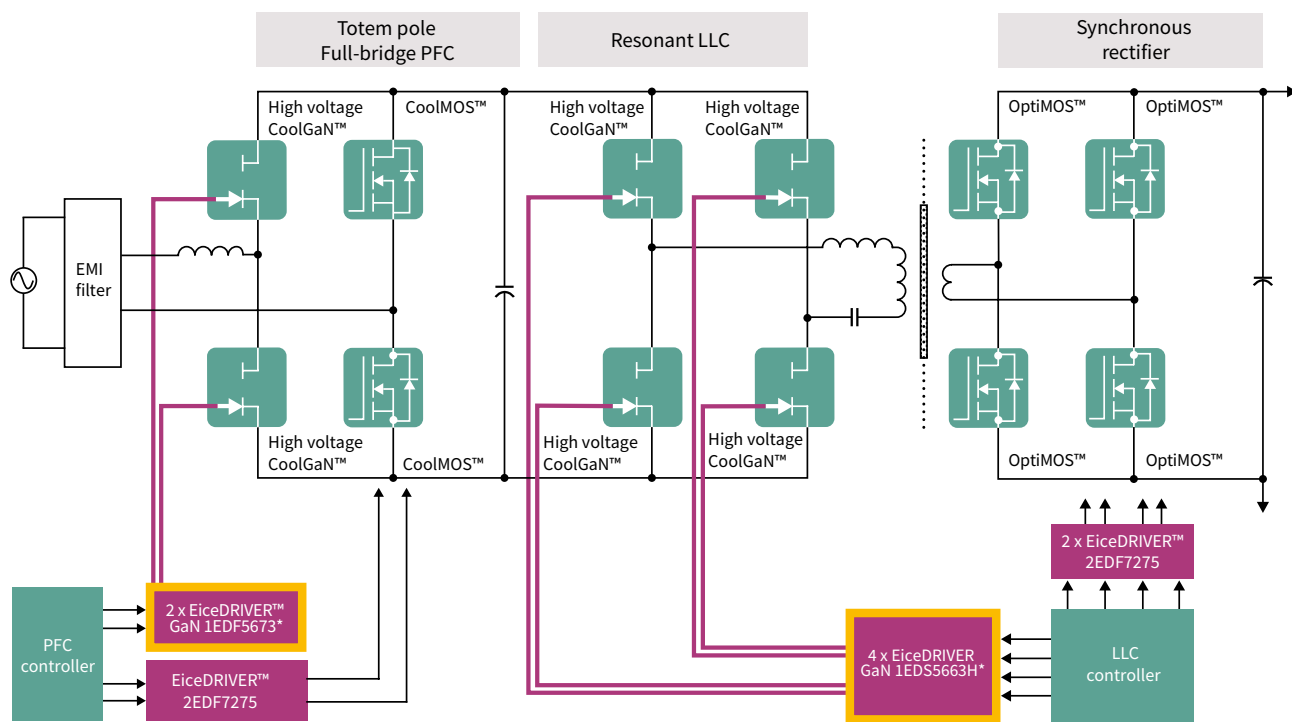

CoolGaN™ 400 V and 600 V e-mode GaN HEMTs – bringing GaN technology to the next level

Infiniteon's CoolGaN™ 400 V and 600 V e-mode HEMTs enable more than 98 percent system efficiency and help customers to make their end products smaller and lighter. Driving enhancement-mode devices requires some additional features when choosing the correct gate driver IC; however, CoolGaN™ technology does not require customized ICs. Infineon offers three new members of a single-channel galvanically isolated gate driver IC family. The EiceDRIVER™ 1EDx56x3x family is a perfect fit for e-mode GaN HEMTs with non-isolated gate (diode input characteristic) and low threshold voltage, such as CoolGaN™.

Complete support of all requirements specific to e-mode GaN HEMTs operation:

- › Low driving impedance (on-resistance 0.85 Ω source, 0.35 Ω sink)
- › Resistor programmable gate current for steady on-state (typically 10 mA)
- › Programmable negative gate voltage to completely avoid spurious turn-on in half-bridges

Block diagram: high-efficiency GaN switched-mode power supply (SMPS)

*EiceDRIVER™ GaN ICs are single-channel products

CoolGaN™ 400 V e-mode GaN HEMT

Class D output stage offering the best audio experience

CoolGaN™ 400 V enables smoother switching and more linear class D output stage by offering low/linear C_{oss} , zero Q_{rr} , and normally-off switch. Ideal class D audio amplifiers offer 0 percent distortion and 100 percent efficiency. What impairs the linearity and power loss is highly dependent on the switching characteristics of the switching device. Infineon's CoolGaN™ 400 V breaks through the technology barrier by introducing zero reverse recovery charge in the body diode and very small, linear input and output capacitances.

In addition, the e-mode concept offers fast turn-on and turn-off speed. This feature also simplifies pairing CoolGaN™ with the [IRS20957SPBF](#) class D controller and therefore enables faster go-to-market.

CoolGaN™ for class D audio solutions

CoolGaN™ 400 V is tailored for premium HiFi home audio, professional, and aftermarket car audio systems where end-users demand every detail of their high-resolution soundtracks. These have been conventionally addressed by bulky linear amplifiers or tube amplifiers. With CoolGaN™ 400 V as the class D output stage, audio designers will be able to deliver the best audio experience to their prospective audio fans.

The IGT40R070D1, CoolGaN™ 400V device in HSOF-8-3 (TO-leadless) package has been tested in class D audio amplifier applications on 200 W + 200 W dual-channel system designs.

Features and benefits

Key features	Key benefits
> Ultralow and linear C_{oss} 400 V power devices	> Clean switching performance
> Zero Q_{rr}	> Narrow dead time for better THD
> E-mode transistor – normally-off switch	> Easy to use: compatible with the IRS20957SPBF class D audio control IC

The CoolGaN™ 400 V devices benefit from Infineon's engineering expertise towards challenging applications, such as telecom rectifiers and SMPS servers, where CoolGaN™ technology proved to be highly reliable. It is the most robust and performing concept in the market. The CoolGaN™ 400 V portfolio is built around class D audio requirements, with high-performing SMD packages to fully exploit the benefits of GaN technology.

CoolGaN™ 600 V e-mode GaN HEMTs

The highest efficiency and power density with reduced system costs

The e-mode concept offers fast turn-on and turn-off speed, as well as a better path towards integration. CoolGaN™ 600 V e-mode HEMTs enable simpler and more cost-effective half-bridge topologies. As e-mode based products reach maturity, CoolGaN™ 600 V HEMTs are gaining growing prominence thanks to their potential. The CoolGaN™ 600 V series is manufactured according to a specific, GaN-tailored qualification process which goes far beyond the standards for silicon power devices. CoolGaN™ 600 V is designed for datacom and server SMPS, telecom rectifiers, as well as mobile chargers and adapters, and can be used as a general switch in many other industrial and consumer applications. It is the most rugged and reliable solution in the market. The CoolGaN™ portfolio is built around high-performing SMD packages to fully exploit the benefits of GaN.

CoolGaN™ for PFC

CoolGaN™ enables the adoption of simpler half-bridge topologies (including the elimination of the lossy input bridge rectifier). The result is record efficiency (>99%) with a potential for BOM savings.

CoolGaN™ for resonant topologies

- › In resonant applications, ten times lower Q_{oss} and Q_G enables high-frequency operations (>1 MHz) at the highest efficiency levels
- › Linear output capacitance leads to 8 to 10 times lower dead time
- › Devices can be easily paralleled
- › Power density can be pushed even further by optimizing the thermal performance
- › CoolGaN™ enables to push the efficiency forward, thus enabling high power density e.g., in low-power chargers/adapters

Applications

- › Telecom
- › Server
- › Datacom
- › Adapter and charger
- › Wireless charging
- › SMPS

CoolGaN™ IPS half-bridge 600 V

Ease of use with integrated drivers for highest efficiency and power density

The IGI60F1414A1L device combines a half-bridge power stage consisting of two 140 mΩ (typ. $R_{DS(on)}$)/ CoolGaN™ 600 V e-mode switches together with the dedicated gate drivers in one thermally enhanced 8 x 8 mm QFN-28 package. It is thus ideally suited to support the design of compact appliances in the low-to-medium power area.

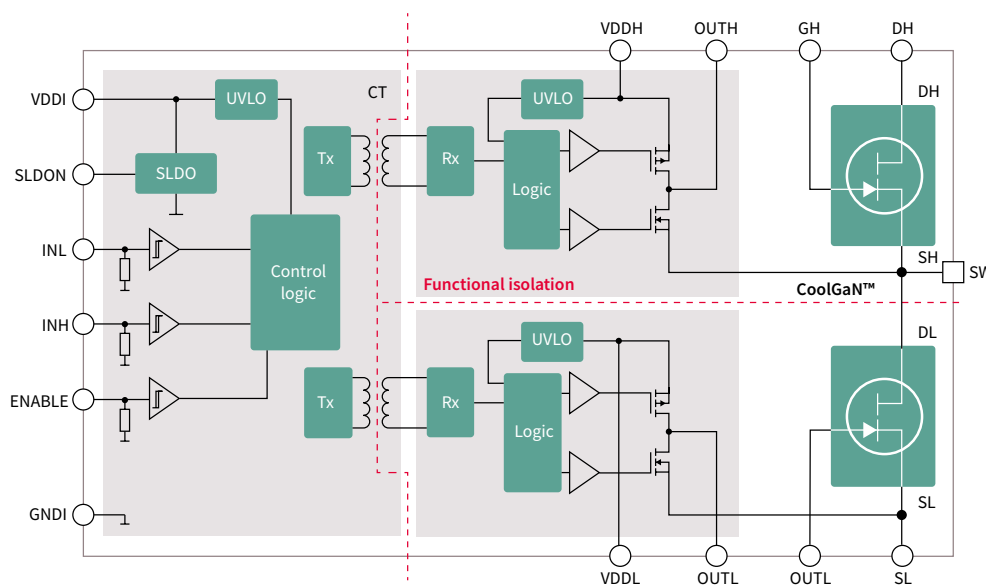

Infiniteon's CoolGaN™ and related power switches provide a very robust gate structure. When driven by a continuous gate current of a few mA in the on-state, a minimum on-resistance $R_{DS(on)}$ is always guaranteed, independent of temperature and parameter variations.

Due to the GaN-specific low threshold voltage and the fast switching transients, a negative-gate drive voltage is required in certain applications to avoid spurious turn-on effects. This can be achieved by the well-known RC interface between the driver and the switch. A few external SMD resistors and capacitors would enable easy adaptation to different applications (low/medium power, hard/soft switching).

The built-in driver utilizes an on-chip coreless transformer (CT) technology to achieve level-shifting to the high side. Besides, CT guarantees excellent robustness even for extremely fast switching transients above 150 V/ns.

Features and benefits

Key features	Key benefits
> Digital-in, power-out building block	> Easy to drive with 2x digital PWM input

Silicon carbide

Revolution to rely on

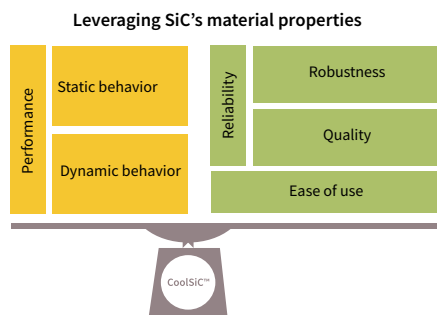

Silicon carbide (SiC) devices belong to the so-called wide bandgap semiconductor group, which offers a number of attractive characteristics for high voltage power semiconductors when compared to commonly used silicon (Si). In particular, the much higher breakdown field strength and thermal conductivity of silicon carbide allow developing devices which by far outperform the corresponding silicon-based ones, and enable efficiency levels unattainable otherwise. Infineon's portfolio of SiC devices covers 600 V to 1200 V Schottky diodes as well as the revolutionary CoolSiC™ MOSFETs 650 V, 1200 V and 1700 V.

EiceDRIVER™ SiC MOSFET gate-driver ICs are well-suited to drive SiC MOSFETs, especially Infineon's ultra-fast switching CoolSiC™ SiC MOSFETs. These gate drivers incorporate most important key features and parameters for SiC driving such as tight propagation delay matching, precise input filters, wide output-side supply range, negative gate voltage capability, active Miller clamp, DESAT protection, and extended CMTI capability.

CoolSiC™ silicon carbide MOSFETs 650 V

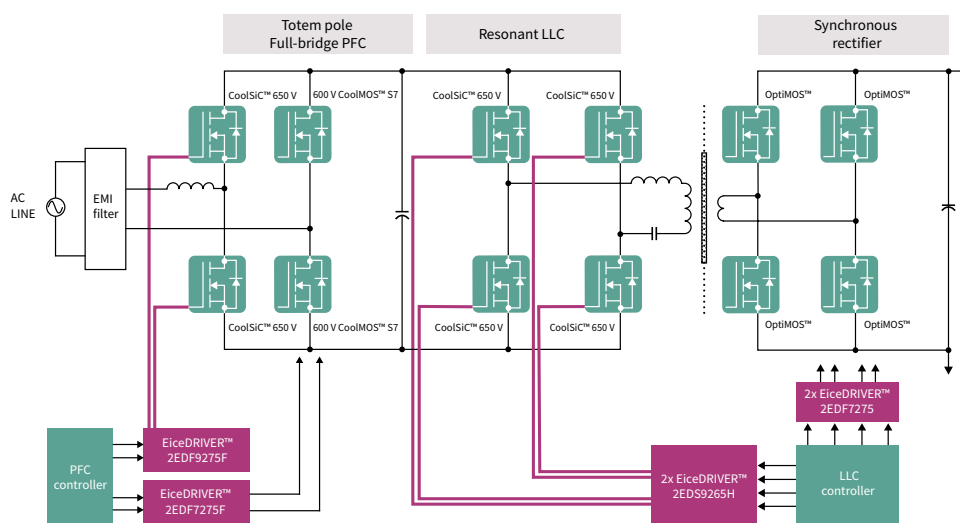

Delivering reliable and cost-effective top performance

Silicon carbide physical characteristics, from wide bandgap to electron mobility and thermal conductivity, provide the basis to engineer high-performance semiconductor technologies and products. The CoolSiC™ MOSFETs from Infineon maximize the advantages of silicon carbide, offering a high-performance product that also meets power electronics design requirements, like reliability and ease of use. As per performance, the CoolSiC™ MOSFETs show low $R_{DS(on)}$ dependency with temperature and low switching losses. The reliability is built on technological strengths and on flawless quality processes. Some aspects of Infineon's SiC technology, like superior gate oxide reliability, excellent thermal behavior, advanced avalanche ruggedness and short circuit capabilities, contribute to the robustness of the device. Infineon's benchmark quality was further improved for silicon carbide, with an application-focused qualification scope exceeding standards, complemented by SiC-specific screening measures. Additional unique features, like 0 V turn-off V_{GS} , wide V_{GS} range, and the use of silicon MOSFET drivers and driving schemas make CoolSiC™ MOSFETs 650 V easy to integrate and use.

CoolSiC™ MOSFETs can enable streamlined and cost-optimized system designs with fewer components, weight and size, reaching high energy efficiency and power density. For instance, the CoolSiC™ MOSFETs boast a low level of Q_{rr} , roughly 80% less of the best CoolMOS™ reference in the market, the CoolMOS™ CFD7. This ensures the robustness of the body diode, making the CoolSiC™ MOSFETs suitable for topologies with continuous hard commutation, like the high-efficiency totem-pole PFC, a topology that enables > 99% of efficiency.

CoolSiC™ silicon carbide MOSFETs 1200 V

Infineon's CoolSiC™ technology enables radically new product designs

Silicon carbide (SiC) opens up new degrees of freedom for designers to harness unseen levels of efficiency and system flexibility. In comparison to traditional silicon-based switches like IGBTs and MOSFETs, the SiC MOSFET offers a series of advantages. These include the low switching losses with 1200 V and 650 V switches, very low reverse recovery losses of the internal commutation proof body diode, temperature-independent low switching losses, and threshold-free on-state characteristics. Based on volume experience and compatibility know-how, Infineon introduces the revolutionary SiC technology which enables radically new product designs with high performance and high reliability. CoolSiC™ MOSFET products are targeted for automotive, photovoltaic inverters, battery charging, EV charging, industrial drives, UPS, SMPS, and energy storage.

Features and benefits

Key features
> Very low switching losses
> Superior gate-oxide reliability
> Threshold-free on-state characteristic
> Wide gate-source voltage range
> Benchmark gate threshold voltage, $V_{GS(th)} = 4.5 \text{ V}$
> Fully controllable dV/dt
> Commutation robust body diode, ready for synchronous rectification

Key benefits
> Best-in-class system performance
> Efficiency improvement and reduced cooling effort
> Longer lifetime and higher reliability
> Enables higher frequency operation, allowing the increase in power density
> Reduction in system cost
> Ease of use

TO-247 4-pin package contains an additional connection to the source (Kelvin connection) that is used as a reference potential for the gate driving voltage, thereby eliminating the effect of voltage drops over the source inductance. The result is even lower switching losses than for the TO-247 3-pin version, especially at higher currents and higher switching frequencies.

The gate-source pin of the TO-263 7-pin package, similar as of the TO-247 4-pin, eliminates the effect of voltage drops over the source inductance, therefore further reduce the turn-on switching loss. TO-263 7-pin package minimizes the leakage inductance between drain and source, reduce the risk of high turn-off voltage overshoot.

CoolSiC™ Schottky diodes

The differences in material properties between silicon carbide and silicon limit the fabrication of practical silicon unipolar diodes (Schottky diodes) to a range up to 100-150 V, with a relatively high on-state resistance and leakage current. In SiC, Schottky diodes can reach a much higher breakdown voltage. Infineon is the world's first SiC discrete power supplier. Infineon offers products up to 1200 V in discrete packages and up to 1700 V in modules.

The long market presence and experience enable Infineon to deliver highly reliable, industry-leading SiC performance. With over ten years of pioneering experience in developing and manufacturing SiC diodes, Infineon's latest CoolSiC™ Schottky diode generation 6 family sets a benchmark in quality, efficiency and reliability.

<ul style="list-style-type: none"> › No reverse recovery charge › Purely capacitive switching › High operating temperature ($T_{j, \max}$ 175°C) 	<ul style="list-style-type: none"> › Low turn-off losses › Reduction of CoolMOS™ or IGBT turn-on loss › Switching losses independent from load current, switching speed and temperature 	<ul style="list-style-type: none"> › System efficiency improvement compared to Si diodes › Reduced cooling requirements › Enabling higher frequency/increased power density › Higher system reliability due to lower operating temperature › Reduced EMI 	<ul style="list-style-type: none"> › Server › Telecom › Solar › UPS › EV charging › Energy storage › PC power › Motor drives › Lighting › CAV

Reverse-recovery charge of SiC Schottky diodes versus Si-pin diodes

The majority of carrier characteristics imply no reverse recovery charge and the only contribution to the switching losses comes from the tiny displacement charge of capacitive nature. In the same voltage range, silicon devices have a bipolar component resulting in much higher switching losses. The graph shows the comparison between various 600 V devices.

Improved system efficiency (PFC in CCM mode operation, full load, low line)

The fast switching characteristics of the SiC diodes provide clear efficiency improvements at a system level. The performance gap between SiC and high-end silicon devices increases with the operating frequency.

CoolSiC™ Schottky diodes 650 V

CoolSiC™ Schottky diodes 650 V G6 and G5

The new CoolSiC™ Schottky diode 650 V G6 product family is built over the strong characteristics of the previous G5 generation, fully leveraging technology and process innovation to propose the best efficiency and zero price/performance products to date.

Foundation technology – CoolSiC™ Schottky diodes 650 V G5

The established CoolSiC™ Schottky diodes G5 product family has been optimized after all key aspects including junction structure, substrate and die attach. It represents a well-balanced product family which offers state-of-the-art performance and high surge current capability at a competitive cost level.

Innovation: optimized junction, substrate and die attach

Infinion's SiC Schottky diode generation 5 is optimized with regard to all key aspects relevant for high-power and high-efficiency SMPS applications.

Junction: merged PN structure

On the junction level, it has an optimized merged PN structure. Compared to competitors, Infineon's SiC diode has an additional P-doped area, which, together with the N-doped EPI layer, forms a PN junction diode. Thus, it is a combination of Schottky diode and PN junction diode. Under normal conditions it works like a standard Schottky diode. Under abnormal conditions such as lighting, AC line drop-out, it works like a PN junction diode. At high current level, the PN junction diode has a significantly lower forward voltage (V_F) than the Schottky diode, which leads to less power dissipation, thus significantly improving the surge current capability.

Substrate: thin wafer technology

On the substrate level, Infineon introduced the thin wafer technology. At the later stage of our SiC diode production, the thin wafer process is used to reduce the wafer thickness by about two-thirds, which significantly reduces the substrate resistance contribution, thus, improving both forward voltage (V_F) and thermal performance.

Die attach: diffusion soldering

On the backside, package level diffusion soldering is introduced, which significantly improves the thermal path between the lead frame and the diode, enhancing the thermal performance. With the same chip size and power dissipation, the junction temperature is reduced by 30°C.

Latest development - CoolSiC™ Schottky diodes 650 V G6

The CoolSiC™ Schottky diodes G6 product family introduces a novel and proprietary Schottky metal system. This contributes to reducing the forward voltage (V_F) to challenging levels, determining a measurable decrease of conduction losses. Infineon's CoolSiC™ Schottky diodes enable optimum efficiency and ruggedness. Lower forward voltage (V_F) means lower conduction loss, and lower capacitive charge (Q_c) means lower switching loss. $Q_c \times V_F$ is the figure of merit for efficiency, and comparison indicates that the latest generation 6 products have the lowest $Q_c \times V_F$ on the market. Infineon's CoolSiC™ Schottky diodes offer a surge current robustness far better than the one offered by the most efficient products. Thus, under abnormal conditions, this surge current capability offers excellent device robustness.

Efficiency comparison

In terms of efficiency, the 8 A G6 device has been tested in CCM PFC. The maximum output power is 3.5 kW. The left figure shows the relative efficiency at 65 kHz, while the figure on the right shows the relative efficiency at 130 kHz. This shows that Infineon's CoolSiC™ Schottky diode G6 delivers better efficiency over the full load range, keeping this advantage even at 130 kHz, therefore meeting the needs of designers who want to increase the switching frequencies in their designs to attain more power density.

The best price performance

CoolSiC™ Schottky diodes G6 are the outcome of Infineon's continuous technological and process improvements, which enable the design and development of SiC-based products, making them more price-competitive and increasing performance across generations. As a result, G6 is Infineon's best price/performance CoolSiC™ Schottky diode generation, offering the highest cost-efficiency. In addition, Infineon offers the reliability of collaborating with the industry leader. Customers can leverage Infineon's proven quality and supply chain reliability. They can benefit from "one-stop-shop" advantages and maximize system performance, combining CoolSiC™ Schottky diodes with the SJ MOSFETs of the CoolMOS™ 7 family, such as 600 V C7, 650 V C7, 600 V G7, 650 V G7 and 600 V P7.

A comprehensive portfolio

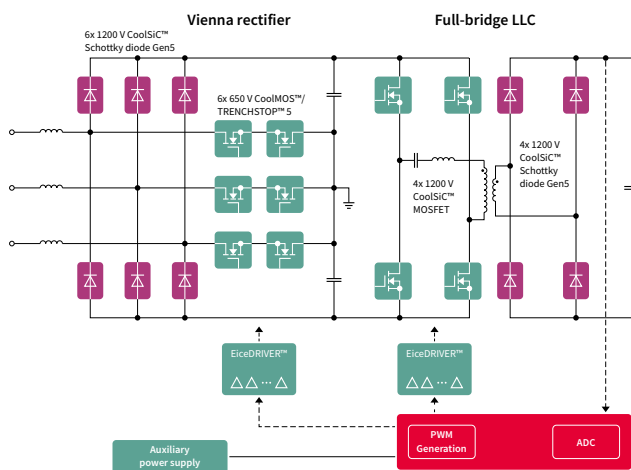

The combined G6 and G5 CoolSiC™ Schottky diode 650 V diode portfolio offers a wide choice of packages and ampere class granularity to allow the best fit to applications. G6 comes in double DPAK, the first top-side cooled surface mount package, which allows thermal decoupling of PCB to chip junction and enables higher power dissipation and improved system lifetime thanks to the reduced board temperature.

CoolSiC™ Schottky diodes 1200 V

A new level of system efficiency and reliability

By using hybrid Si power switch/SiC diode sets, industrial application designers will gain flexibility for system optimization compared to purely silicon-based solutions. SiC diodes enable system improvements such as higher output power, greater efficiency or higher switching frequency. By implementing CoolSiC™ diodes generation 5, for example, in Vienna rectifier topology, in combination with Infineon's 650 V TRENCHSTOP™ IGBTs and 650 V CoolMOS™ MOSFETs, designers can achieve outstanding system-level performance and reliability.

One of the most commonly used topologies for EV DC charging

Features and benefits

Key features
> Zero Q_{rr} leading to no reverse recovery losses
> High surge current capability up to fourteen times of the nominal current
> Tight forward voltage distribution
> Temperature-independent switching behavior
> Low forward voltage ($V_F = 1.4$ V) even at high operating temperature
> Available in both through-hole and SMD packages
> Up to 40 A rated diode

Key benefits
> System efficiency improvement over Si-based diodes
> Enabling higher frequency/increased power density solutions
> High system reliability by extended surge current
> Reduced cooling requirements through lower diode losses and lower case temperatures
> System size/cost saving due to reduced heatsink requirements and smaller magnetics

650 V Si IGBT/Si SJ MOSFET and 1200 V SiC diode/ultrafast Si diode in a Vienna rectifier topology, $f_{sw}=48$ kHz

- 650 V SJ MOSFET + 1200 V SiC diode (IPW65R045C7 + IDW15G120C5B)
- 650 V IGBT + 1200 V SiC diode (IKW50N65EH5 + IDW15G120C5B)
- 650 V SJ MOSFET + 1200 V Si diode (IPW65R045C7 + Vendor A)
- 650 V IGBT + 1200 V Si diode (IKW50N65EH5 + Vendor A)

SiC vs. Si diode

- > +0.8% higher efficiency
- > Increased output power is possible

Discrete IGBTs

Market leadership through groundbreaking innovation and application focus

Resolute to achieve the highest standards in performance and quality, Infineon offers a comprehensive portfolio of application-specific discrete IGBTs. From 600 V up to 1600 V, we offer a wide range of IGBT voltage classes to meet different voltage requirements in each application.

kHz f_{sw} [kHz] (typical used up to) µs Short circuit withstand time [µs]

High-power drive IGBT portfolio

Did you know that you could potentially save 20% of energy or 17 million tons of CO₂ if only half of all industrial drives had an electric speed control? Infineon has designed the 7th generation of TRENCHSTOP™ IGBTs, especially for variable speed drives. Based on the new micro-pattern trench technology, which offers a high level of controllability. These features bring significant loss reduction in the application, especially for industrial drives, which usually operate at moderate switching frequency.

650 V TRENCHSTOP™ 7 T7

If you still use old technology, like the short-circuit IGBT 3 or the non short-circuit TRENCHSTOP™ 5, then it is about time to change that.

Why? Because:

- > The flexible family IGBT7 T7 is a benchmark in performance with state-of-the-art quality and best price/performance ratio.
- > IGBT7 T7 is the best-in-class device for industrial motor drives, namely uninterruptable power supplies for photovoltaic and air conditioning PFC topologies

1200 V TRENCHSTOP™ 7 S7

The new 1200 V IGBT generation TRENCHSTOP™ IGBT7 is designed to meet requirements of high efficiency, lowest conduction and switching losses in hard switching and resonant topologies operating at switching frequencies up to 20 kHz. Very soft, fast recovery anti-parallel emitter controlled diode is optimized for fast recovery while still maintaining a high level of softness complementing to an excellent EMI behavior.

Target applications:

- > Industrial drives
- > Solar
- > UPS

The best-in-class MPT technology of the TRENCHSTOP™ IGBT7 S7 allows reduction of both $V_{CE(sat)}$ by ~ 10% and total switching losses of > 10% compared to the TRENCHSTOP™ 2 family.

650 V TRENCHSTOP™ 5 IGBT

In terms of switching and conduction losses, there is no other IGBT in the market that can match the performance of the TRENCHSTOP™ 5. Wafer thickness has been reduced by more than 25 percent, which enables a dramatic improvement in both switching and conduction losses while providing an increased breakthrough voltage of 650 V. Based on TRENCHSTOP™ 5 IGBT technology, Infineon has developed six different product families optimized for specific applications, allowing designers to optimize for high efficiency, system cost or reliability demands of the market. The quantum leap of efficiency improvement provided by the TRENCHSTOP™ 5 IGBT families opens up new opportunities for designers to explore. EiceDRIVER™ isolated gate driver such as the 1ED compact family 650 V IGBT in solar and UPS applications. EiceDRIVER™ low side gate driver with overcurrent protection is widely used in induction cooking application and PFC stage.

TRENCHSTOP™ 5 L5	Best-in-class IGBT low $V_{CE(sat)}$ IGBT $V_{CE(sat)}$ IGBT – 1.05 V Best trade-off $V_{CE(sat)}$ V_{SS} E_{TS} for frequencies below 20 kHz	Solar, UPS, welding <ul style="list-style-type: none"> › Ultralow frequency converters › Three-level inverter type I NPC 1 and NPC 2 › Modified HERIC inverter › AC output (aluminum/magnesium welding)
TRENCHSTOP™ 5 S5	Best-in-class ease-of-use IGBT Elimination of: <ul style="list-style-type: none"> › Collector-emitter snubber capacitor and gate capacitor in low inductance designs (<100 nH) › Softer switching than TRENCHSTOP™ 5 H5 	UPS, battery charger, solar, welding <ul style="list-style-type: none"> › Medium frequency converters › Multilevel inverter stages › Output stages › PFC
TRENCHSTOP™ 5 H5/F5	Best-in-class high frequency IGBT <ul style="list-style-type: none"> › Bridge to SJ MOSFET performance › Highest efficiency, especially under light load conditions 	UPS, solar, welding <ul style="list-style-type: none"> › High frequency converters › Multilevel inverter stages › Output stages › PFC
TRENCHSTOP™ 5 WR5	Price optimized application specific IGBT for zero current switching (ZCS) <ul style="list-style-type: none"> › Optimized full rated hard switching turn-off typically found in welding › Excellent R_G controllability › Soft recovery plus low reverse recovery charge (Q_{rr}) for diode 	Air conditioning, welding <ul style="list-style-type: none"> › Medium frequency converters › Zero-voltage switching › PFC
TRENCHSTOP™ 5 WR6	Outstanding price-performance ratio with the latest 650 V reverse-conducting IGBT in the new high creepage TO-247-3 package <ul style="list-style-type: none"> › Very low $V_{CE(sat)}$ of 1.4 V @25°C › High creepage and clearance TO-247 package › Optimized for full-rated hard switching turn-off 	Air conditioning, welding <ul style="list-style-type: none"> › RAC/CAC PFC outdoor compressor › Compact/portable welding › Light-medium industrial welding

1200 V IGBT families

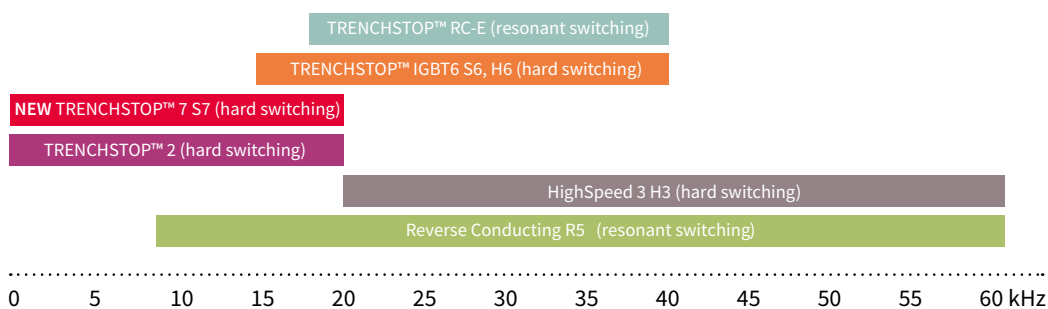

The 1200 V TRENCHSTOP™ 2 IGBT is optimized for low conduction losses with the lowest saturation voltage $V_{CE(sat)}$ of 1.75 V. A soft fast recovery emitter controlled diode further minimizes the turn-on losses.

The 1200 V HighSpeed 3 discrete IGBTs provides the lowest losses and the highest reliability for switching above 20 kHz. Transition to fast switching high-speed devices allows reduction in the size of the active components (25-70 kHz).

The new 1200 V IGBT generation, TRENCHSTOP™ IGBT6, is designed to meet requirements of high efficiency, lowest conduction and switching losses in hard switching and resonant topologies, operating at switching frequencies above 15 kHz. The IGBT6 devices can be used as direct replacement for the HighSpeed 3 H3 series, without any changes of the design. Such plug-and-play replacement of H3 with new S6 IGBT may benefit up to 0.2 percent efficiency improvement.

The Reverse Conducting R5 is the latest generation in the RC-H series of reverse conducting IGBT. With a monolithically integrated diode, they offer optimized performance for resonant switching applications such as induction cooking. R5 devices are also available in 1350 V and 1600 V blocking voltage.

EiceDRIVER™ isolated gate driver like 1ED Compact family and EiceDRIVER™ 1200 V level shift gate driver family are perfect match for the 1200 V IGBT in motor control, general purpose inverter, solar, and UPS applications. EiceDRIVER™ low-side gate driver with over current protection is widely used in induction cooking application.

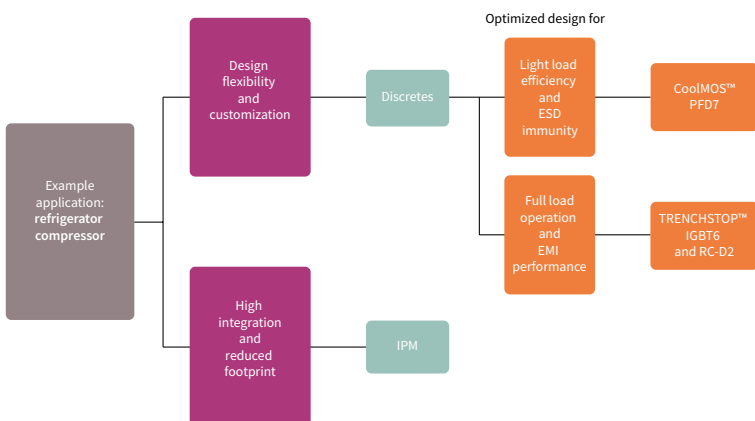

Reverse Conducting R5	World-class Reverse Conducting RC-H products High performance and low losses	Induction cooking Resonant switching Medium to high frequency converters
Reverse Conducting E1	Competitive Reverse Conduction RC-E Price versus performance leader	Induction cooking Resonant switching Low to medium power cookers
TRENCHSTOP™ 2	Best-in-class 1200 V IGBT <ul style="list-style-type: none"> > Outstanding efficiency > Lowest conduction and switching losses > Market proven and recognized quality leader 	Motor control, general purpose inverter, solar, UPS Low frequency converters
HighSpeed 3 H3	High speed/high power IGBT <ul style="list-style-type: none"> > First tailless/low loss IGBT on market > Market proven and recognized quality leader 	Solar, UPS, welding Medium frequency converters
TRENCHSTOP™ IGBT6	New low switching losses and high power IGBTs <ul style="list-style-type: none"> > Optimized for operation at 15 – 40 kHz > Best combination of low $V_{CE(sat)}$ of 1.85 V and low switching losses 	UPS, solar, welding Medium frequency converters

Lower power drive IGBT portfolio

650 V TRENCHSTOP™ IGBT6 and 600 V RC-D2

Motor drives up to 1 kW are used in a wide variety of applications, from home appliance fans and compressors to pumps. The market for these products demands design flexibility, EMI performance, and easy controllability. Therefore, these compact motors require power electronics with the lowest losses and best thermal performance. The TRENCHSTOP™ IGBT6 family of discrete devices has been designed for the lowest switching losses, which is particularly important in systems with higher switching frequencies (up to 30 kHz). Additionally, the IGBTs are co-packed with the soft, fast-recovery Rapid 1 anti-parallel diodes for the lowest total losses. With a higher blocking voltage at 650 V, and short-circuit rating, TRENCHSTOP™ IGBT6 is a key contributor to robust motor designs. The new RC-D2 family of discrete devices has been cost-optimized in surface-mounted packages. The device contains a monolithically integrated diode and has HV-H3TRB ruggedness capability. With a blocking voltage at 600 V, and short-circuit rating, the RC-D2 is a key contributor to cost-effective motor designs.

Switch selection for low power drives < 300 W

Features and benefits

Key features
> Available in surface-mounted packages
> IGBT6 co-packed with and without diodes (DPAK, TO-220)
> RC-D2 monolithically integrated diode (DPAK, SOT-223)
> SC rating between 3 μs and 5 μs
> Low EMI due to easy controllability

Key benefits
> Enable space limited application
> Performance improvement
> Cost-optimized solution
> SC protection
> No need for additional components on PCB

EMI performance

- > $R_{g(on)}$ and $R_{g(off)}$ are selected to meet dv/dt of 2 V/ns at 500 mA and T_j of 100°C
- > IGBTs (IKD04N60RC2) are easily controllable by optimizing R_g values
- > CoolMOS™ (IPS60R1K0PFD7S) EMI performance can be enhanced with additional passive components

Reverse Conducting for soft-switching applications

650 V Reverse Conducting R6 IGBT in TO-247 package

The 650 V R6 IGBT offers the lowest $V_{CE(sat)}$ and optimized E_{off} for best efficiency, minimized power losses and cooling effort. The good EMI behavior simplifies filtering design, reduces system costs and effort for the designers. Thanks to the best system performances and high compatibility with the existing gate driver solution, 650 V R6 IGBT represents the optimal choice for soft switching topologies.

Features and benefits

Key features	Key benefits
> Very low $V_{CE(sat)}$ and low E_{off}	> Lowest losses on IGBT, high system efficiency for higher power output
> High ruggedness and stable temperature behavior	> Fast and easy replacement of predecessor R5 portfolio
> Maximum operating T_j of 175 °C	> High device reliability
	> Good EMI behavior

Package innovations

Discrete IGBT package overview

Infinion discrete IGBT package portfolio contains SMD (surface mount device) packages, for example, D²PAK, DPAK, SOT-223, and through-hole packages, for example, TO-220, TO-220 FP, TO-247, TO-247 HCC, TO-247-4, TO-247PLUS, TO-247PLUS-4, and TO-247 advanced isolation packages. It provides discrete IGBTs solutions with and without anti-parallel diode, which is an excellent fit to use in industrial, home appliance, and automotive applications.

	P-SOT-223-4 SMD, single transistor, small signal	TO-252 (DPAK)	TO-263 (D ² PAK)	TO-220	TO-220 FullPAK	TO-247	TO-247 4-pin	TO-247PLUS	TO-247PLUS 4-pin	TRENCH-STOP™ advanced isolation TO-247	TO-247 HCC
Package options

TRENCHSTOP™ advanced isolation

Fully isolated TO-247 package with industry leading IGBTs

TRENCHSTOP™ advanced isolation solution breaks the limits reached by traditional packaging and isolation techniques. This new isolated package enables the highest power density, the best performance and the lowest cooling effort thanks to an effective and reliable thermal path from the IGBT die to the heatsink.

In addition to providing 100 percent electrical isolation, TRENCHSTOP™ advanced isolation also eliminates the need for thermal grease or thermal interface sheets. The new package delivers at least 35 percent lower thermal resistivity, helping designers to increase power density, as well as lower system complexity and assembling costs.

This new package solution allows industrial and home appliance designs to fully utilize the high performance of TRENCHSTOP™ IGBTs without compromises for isolation and cooling.

Features and benefits

Key features	Key benefits
> 2500 V _{RMS} electrical isolation, 50/60 Hz, t = 1 min	> Up to 35 percent reduction in assembly time reduces manufacturing cost
> 100 percent tested isolated mounting surface	> Increased power density
> Lowest R _{th(j-h)}	> Improved reliability from higher yield and no isolation film misalignment
> Low coupling capacitance, 38 pF	> Less EMI filter design effort
> No need for isolation film or thermal interface material	> Decreased heatsink size

Thermal resistivity of package and isolation types

1) Isolation material: standard polyimide based reinforced carrier insulator film with 152 μm thickness, 1.3 W/mK thermal conductivity

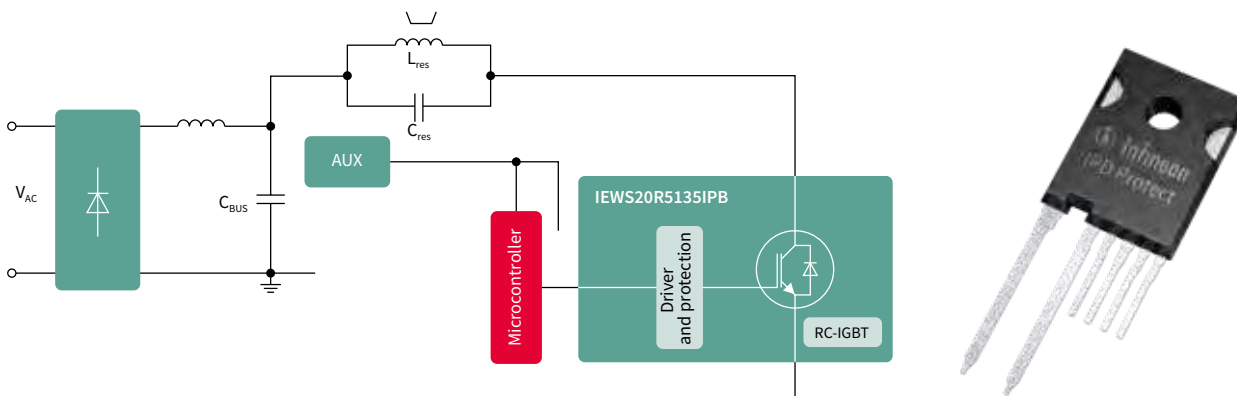

Integrated Power Device – IPD protect

IEWS20R5135IPB - 20 A 1350 V TRENCHSTOP™ IGBT with integrated protective functions

Infiniteon's **IEWS20R5135IPB** is a best-in-class IGBT in RC-H5 technology with a unique protective gate driver IC co-packed in a TO-247 6-pin package for induction heating applications. IPD protect has, not only the industry's best IGBT performance considering blocking voltage, static losses and conduction losses in induction cooktop applications and other soft switching application, but also integrated protection functions.

Its original concept provides protection against overvoltage, overcurrent, and overtemperature and additional features as a unique active clamp control, fault condition notification, and a special two level turn-on gate driving current that reduces significantly the typical high start-up peak current. These integrated protection functions provide a simple and robust solution for increased overall system reliability.

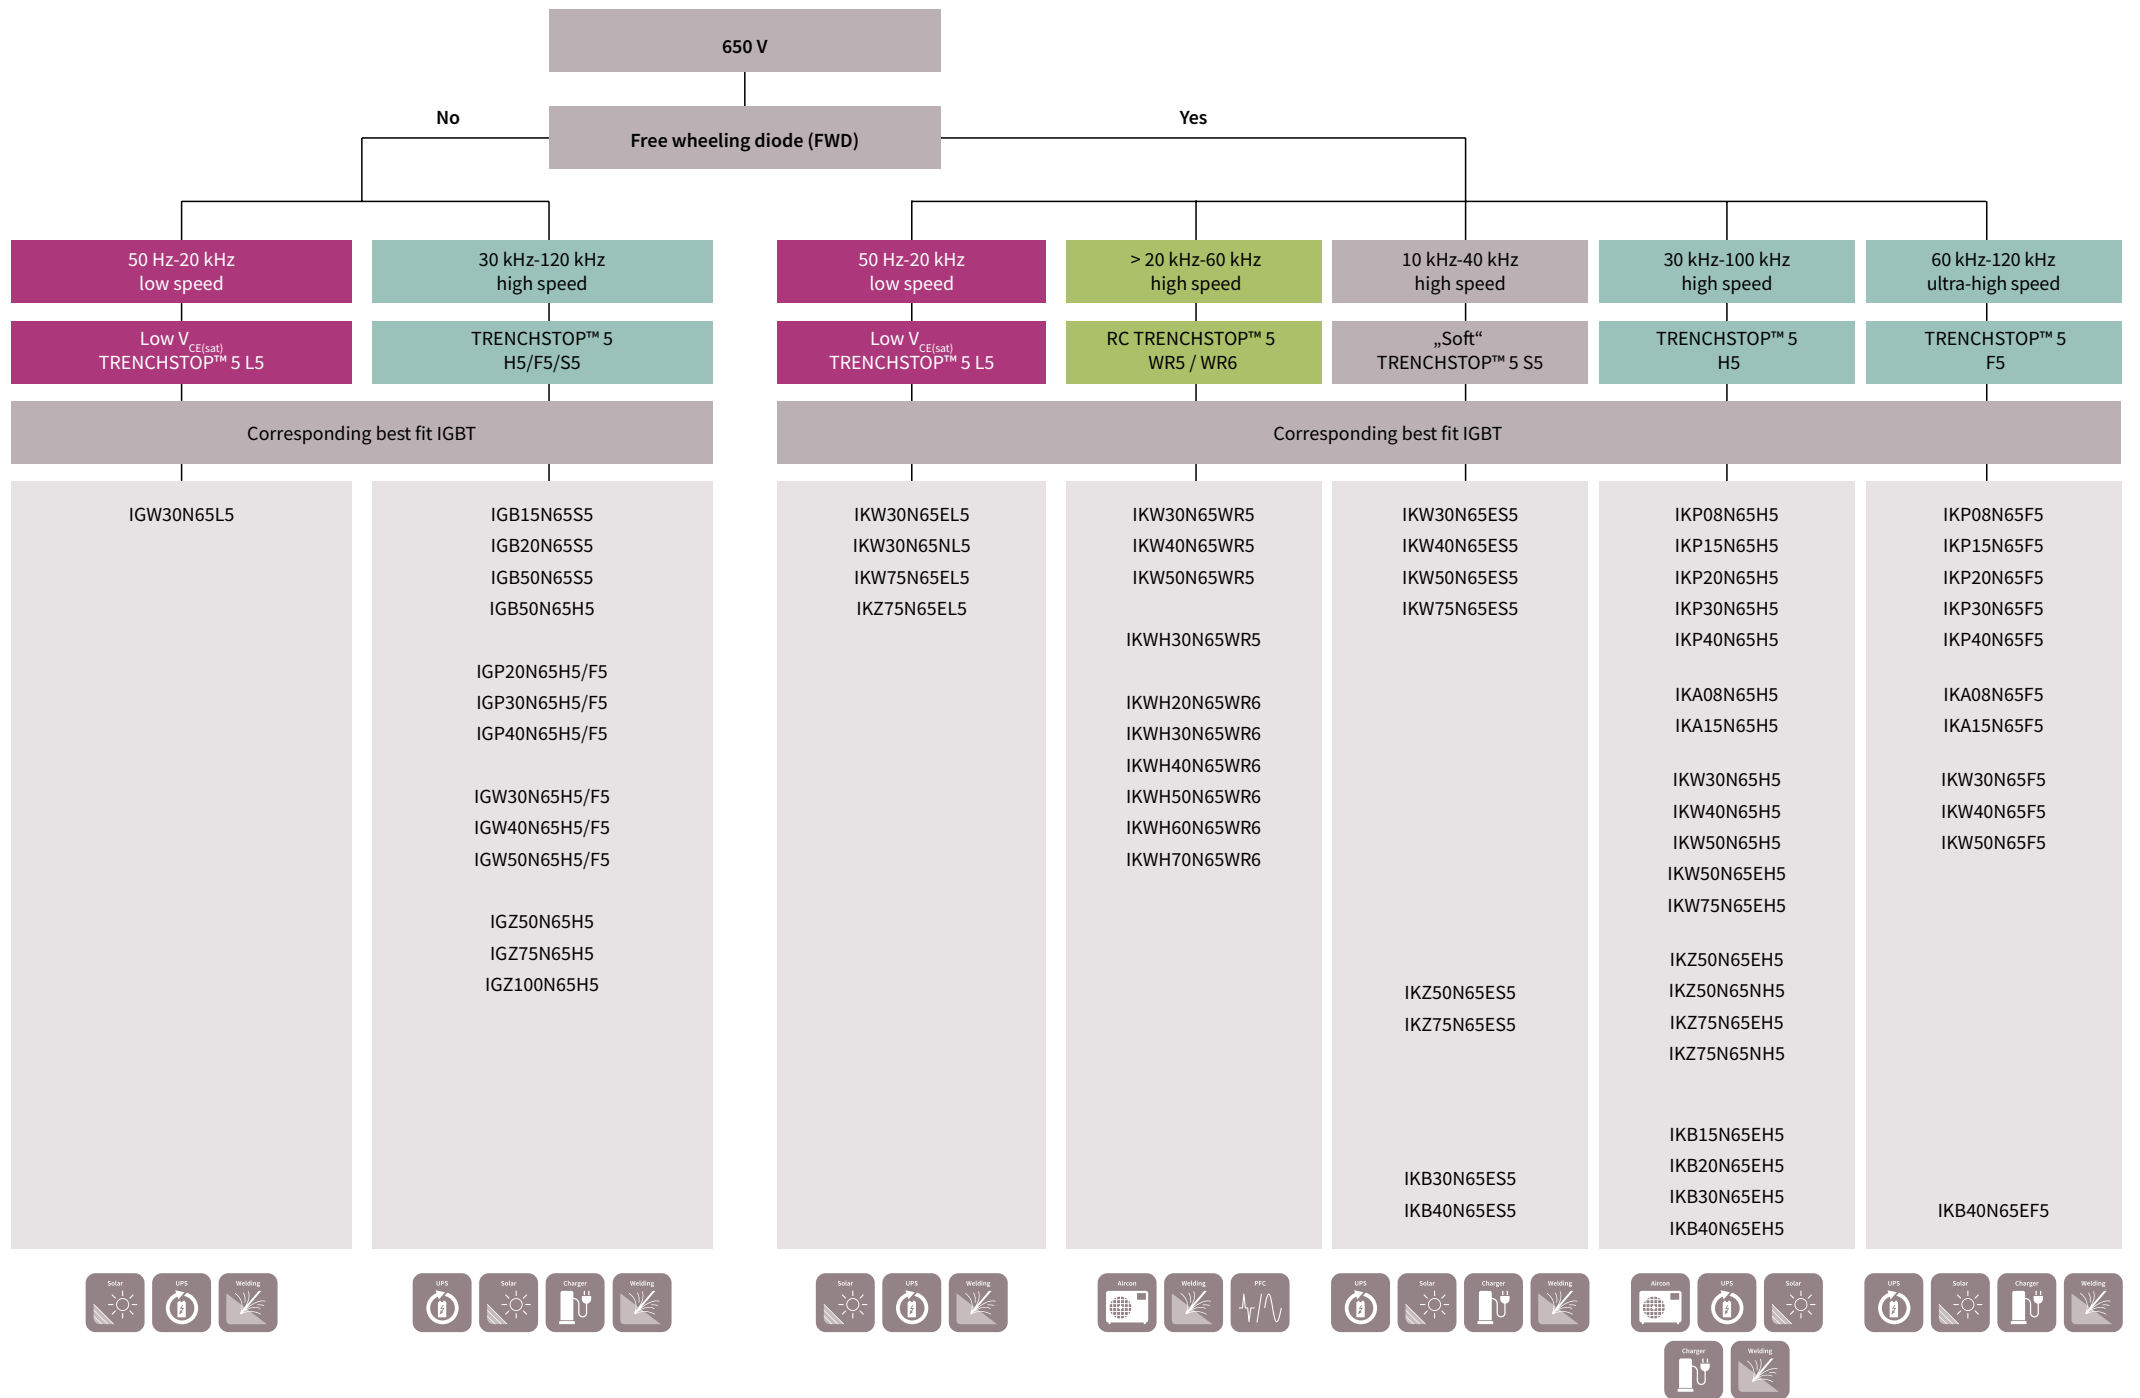

Features and benefits

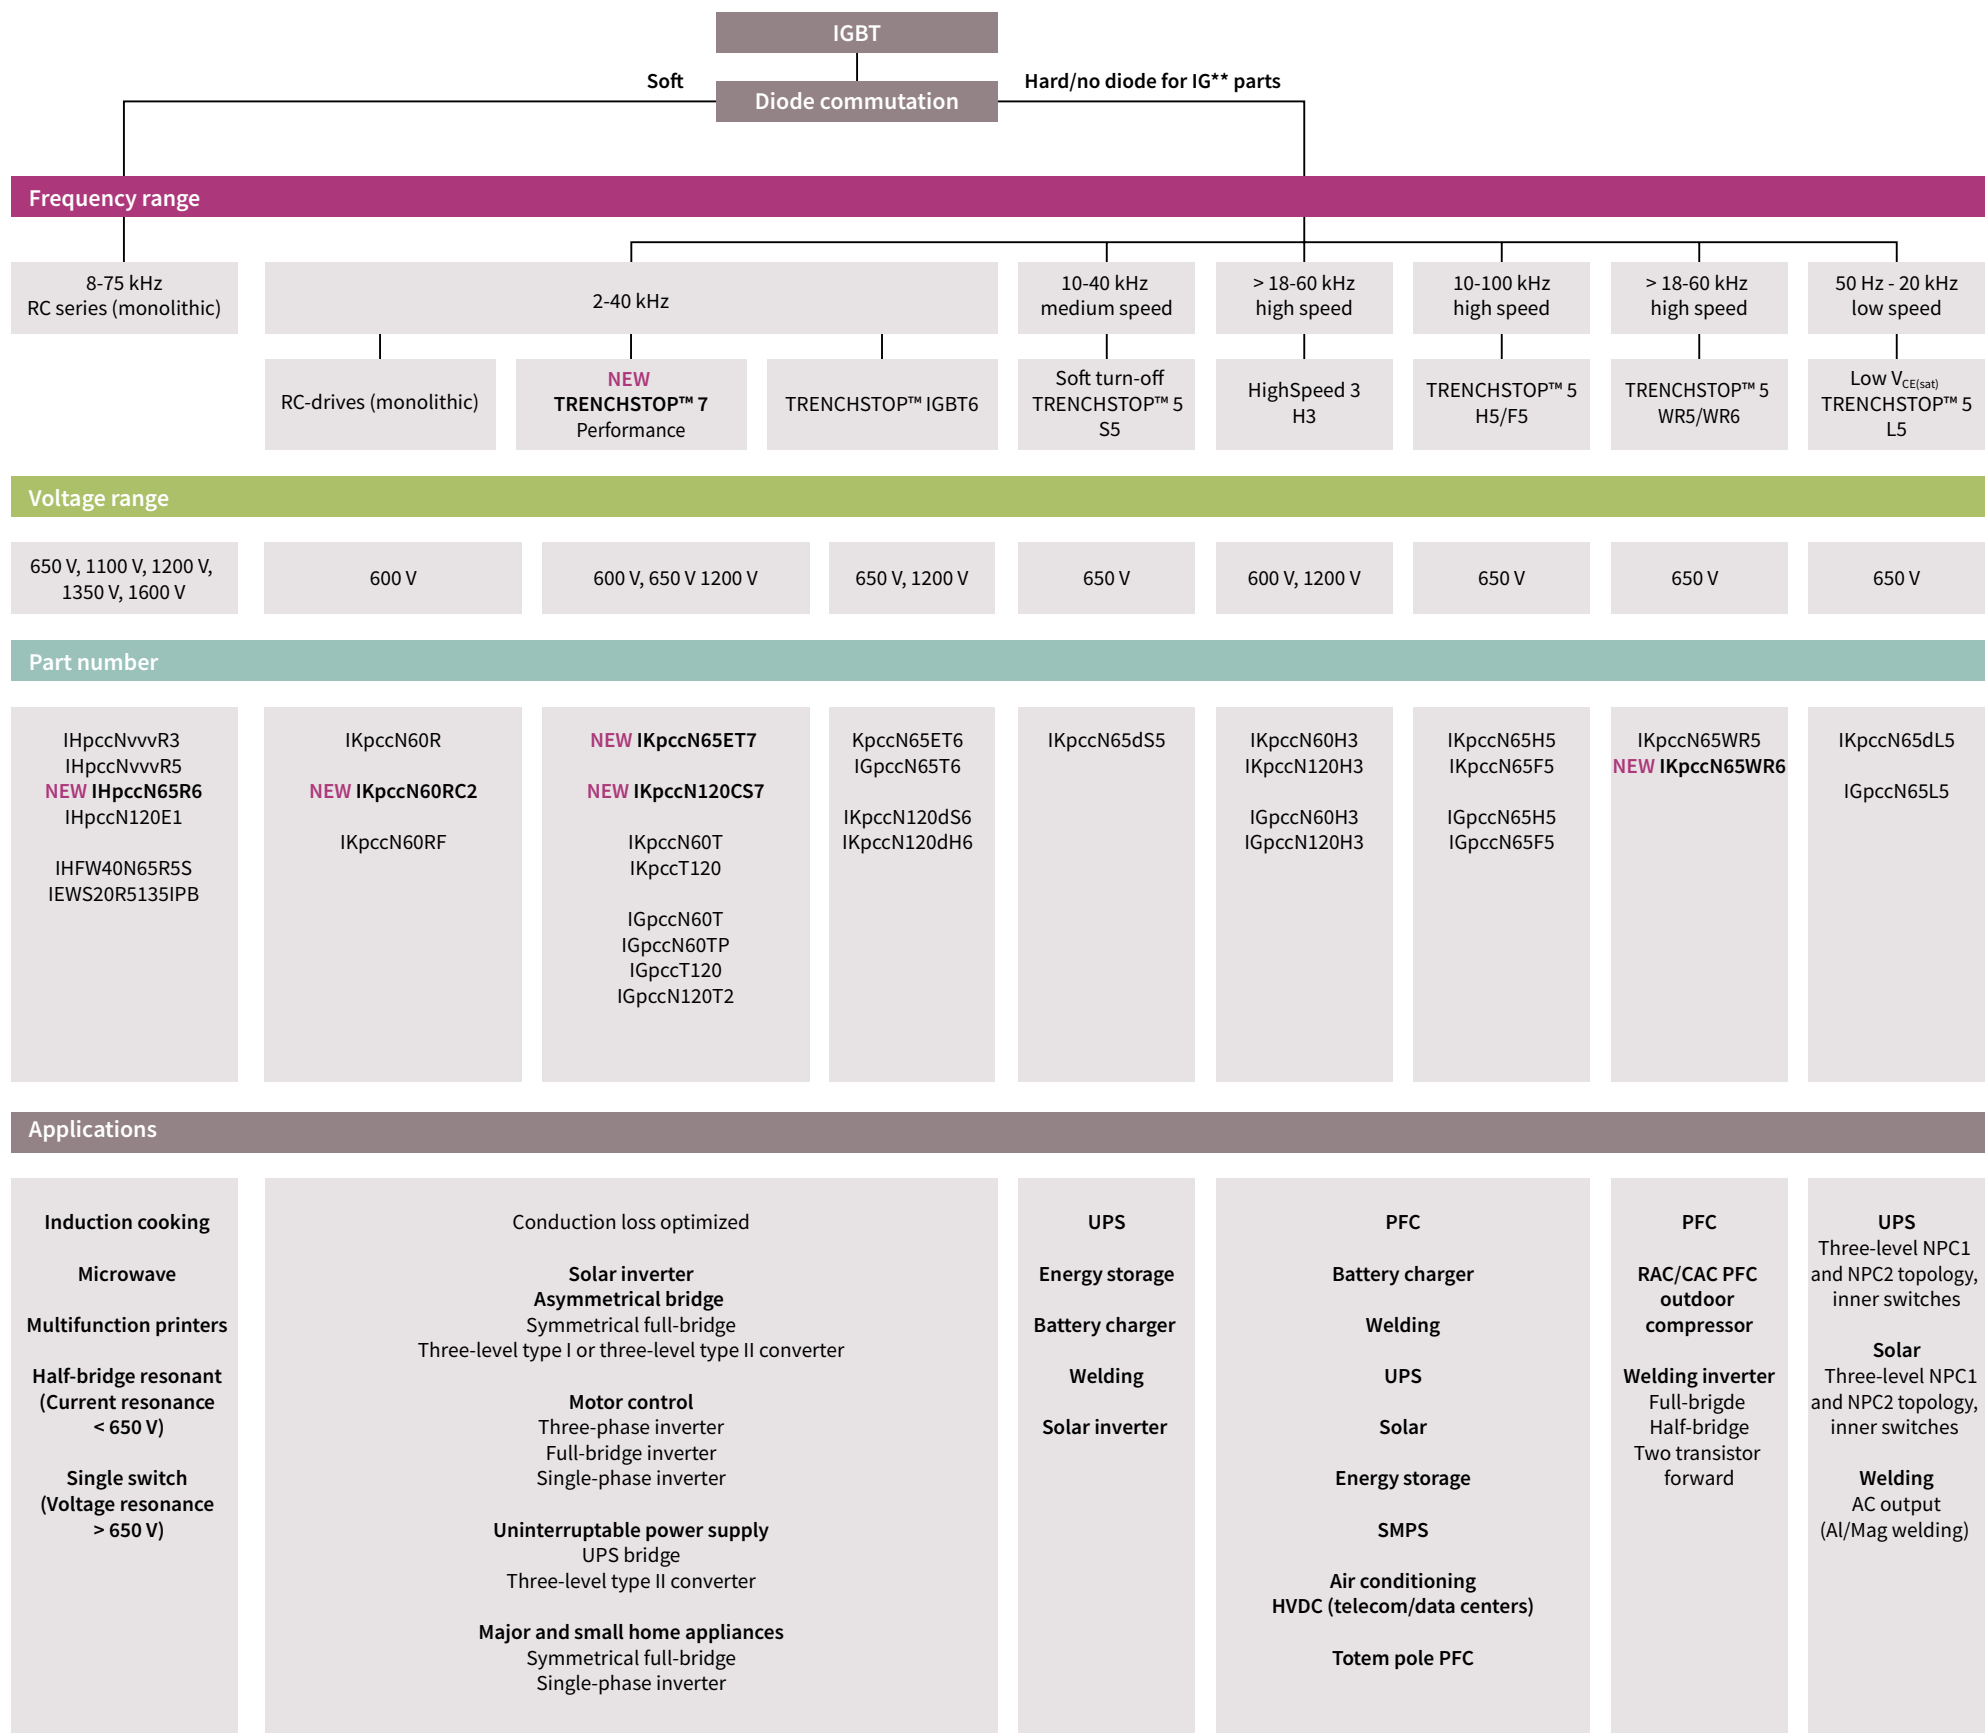

Key features
<ul style="list-style-type: none"> > Reverse Conducting IGBT with monolithic body diode designed for soft switching
Integrated driver with <ul style="list-style-type: none"> > Overvoltage and overcurrent protection > Active clamp control circuit > Programmable overvoltage threshold > Programmable cycle-by-cycle overcurrent threshold > Integrated gate drive with 2 level turn-on current > Temperature warning > Over-temperature protection > V_{CC} UVLO > Integrated ESD protection and latch immunity on all pins
<ul style="list-style-type: none"> > TO-247 6-pin package

Silicon power diodes

Filling the gap between SiC diodes and emitter controlled diodes

The Rapid diode family complements Infineon's existing high-power 600 V/650 V diode portfolio by filling the gap between SiC diodes and previously released emitter controlled diodes. They offer a perfect cost/performance balance and target high-efficiency applications switching between 18 and 100 kHz. Rapid 1 and Rapid 2 diodes are optimized to have excellent compatibility with CoolMOS™ and high speed IGBTs (insulated gate bipolar transistor) such as the TRENCHSTOP™ IGBT7 and TRENCHSTOP™ 5.

The Rapid 1 diode family

Rapid 1 is forward voltage drop (V_F) optimized to address low switching frequency applications between 18 kHz and 40 kHz, for example, air conditioner and welder PFC stages.

- > 1.35 V temperature-stable forward voltage (V_F)
- > Lowest peak reverse recovery current (I_{rrm})
- > Reverse recovery time (t_{rr}) < 100 ns
- > High softness factor

The Rapid 2 diode family

Rapid 2 is Q_{rr}/t_{rr} optimized hyperfast diode to address high-speed switching applications between 40 kHz and 100 kHz, typically found in PFCs in high efficiency switch mode power supplies (SMPS) and welding machines.

- > Lowest reverse recovery charge (Q_{rr}): V_F ratio for best-in-class performance
- > Lowest peak reverse recovery current (I_{rrm})
- > Reverse recovery t_{rr} < 50 ns
- > High softness factor

Power management ICs

- › XDP™ SMPS controllers
- › DC-DC digital multiphase controllers
- › AC-DC power management ICs
- › PFC controllers
- › PWM controllers and climate saver systems
- › Resonant LLC half-bridge controller ICs
- › Intelligent power modules
- › Switching regulators
- › Voltage regulators
- › Audio amplifier ICs
- › Lighting ICs
- › Intelligent power modules
- › Motor control ICs

XDP™ SMPS

IDP2309 and IDP2303A – digital multi-mode PFC+LLC combo controller

The IDP2309 and IDP2303A are high performance digital combo controllers with integrated drivers and 600 V depletion cell designed for boost PFC and half-bridge LLC targeting switched mode power supplies (SMPS) from 75 W to 300 W.

- › Support non-AUX operation with the lowest standby performance and start-up cell
- › Support multi-mode PFC operation for optimized efficiency curve
- › Configurable frequency setting for LLC soft-start and normal operation
- › Synchronous PFC and LLC burst mode control with soft-start to prevent acoustic noise
- › Excellent dynamic response by adaptive LLC burst mode
- › Configurable and comprehensive protections for PFC/LLC/IC temp
- › IEC62368-1 certified active X-cap discharge function
- › Flexible IC parameter setting with digital UART interface supports PSU platform approach

Key benefits

- › Low BOM count due to high integration of digital control
- › No auxiliary power supply needed
- › Easy design of system schematic and PCB layout
- › Small form factor design
- › Higher system reliability
- › Shorter development cycles and higher design and production flexibility

Product	Target application	Major difference	Package
IDP2309	TV embedded PSU	2 nd redundant PFC output overvoltage protection	DSO-14 (with enhanced HV creepage distance)
IDP2303A	Adapter, general SMPS	Constant output voltage	DSO-16

IDP2309 – embedded PSU

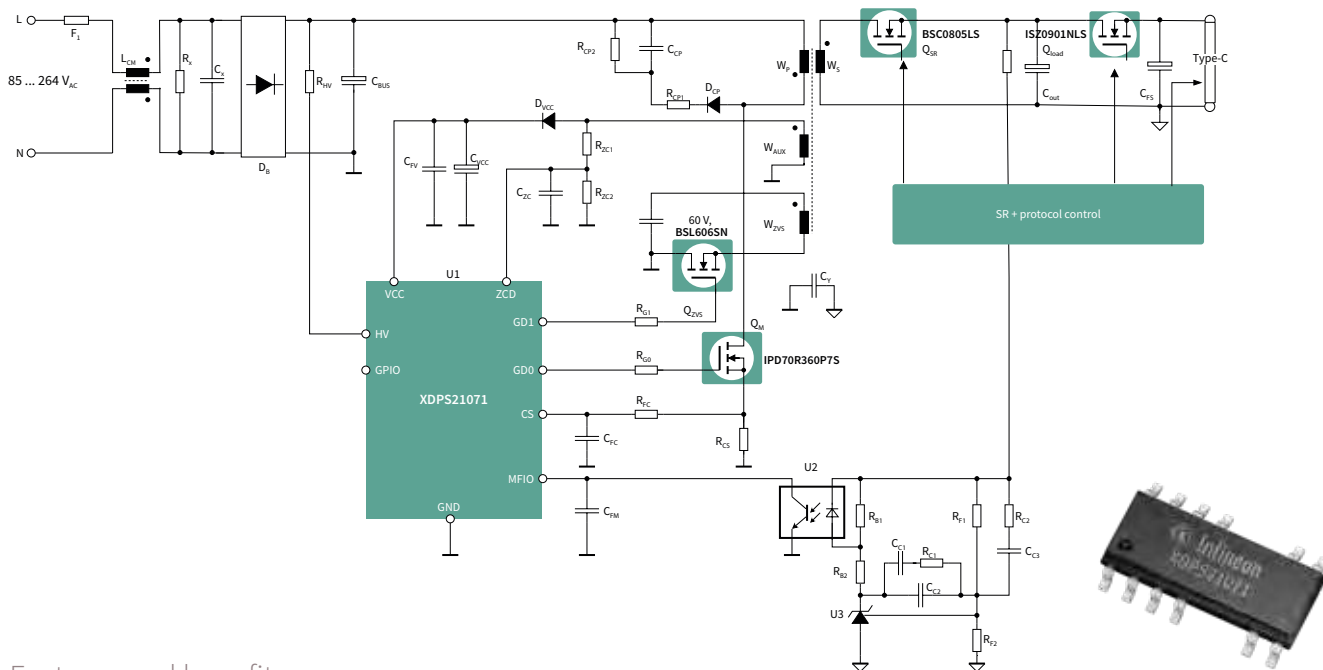

Target applications

- > LCD TV power supply
- > General SMPS
- > Power adapter

XDP™ SMPS

XDPS21071 – digital FFR flyback controller

XDPS21071 is the first flyback controller in the industry to introduce ZVS (Zero Voltage Switching) on the primary side to achieve high efficiency with simplified circuitry and economical switches. By driving an external low voltage switch to induce a negative current to discharge the main high voltage MOSFET, switching losses can be reduced further than traditional valley switching type of switching scheme. To achieve high efficiency with synchronous rectification, DCM operation is ensured via valley detection for a safe and robust operation.

Features and benefits

Key features
> Zero voltage switching
> Frequency law optimization
> Active burst mode operation with multi entry/exit threshold
> Integrated dual MOSFET gate driver
> Easy ZVS implementation with an external 60V MOSFET
> Multiple peak current threshold offset for different output
> CrCM operation with valley detection

Key benefits
> Reduce switching loss and achieve high efficiency
> Optimize efficiency across various line/load condition
> Optimize light and no load efficiency
> Save BOM count and cost with no messy external driver
> Easy to drive, low cost and widely available off the shelf 60 V MOSFET
> Fail safe mechanism to limit output power in the event of PD controller failure
> Avoid CCM operation and no potential of shoot-through with SR MOSFET

REF_XDPS21071_45W1

45W USB-PD Type-C reference design in a small form factor based on **XDPS21071**.

- > 45W USB-PD Type-C charger
- > Universal input range 90~264 V_{AC}
- > Supported output: 5 V/3 A, 9 V/3 A, 12 V/3 A, 15 V/3 A and 20 V/2.25 A
- > Peak efficiency > 90%
- > Low no-load standby input power < 30 mW

Ordering code: REF XDPS2107145W1TOB01

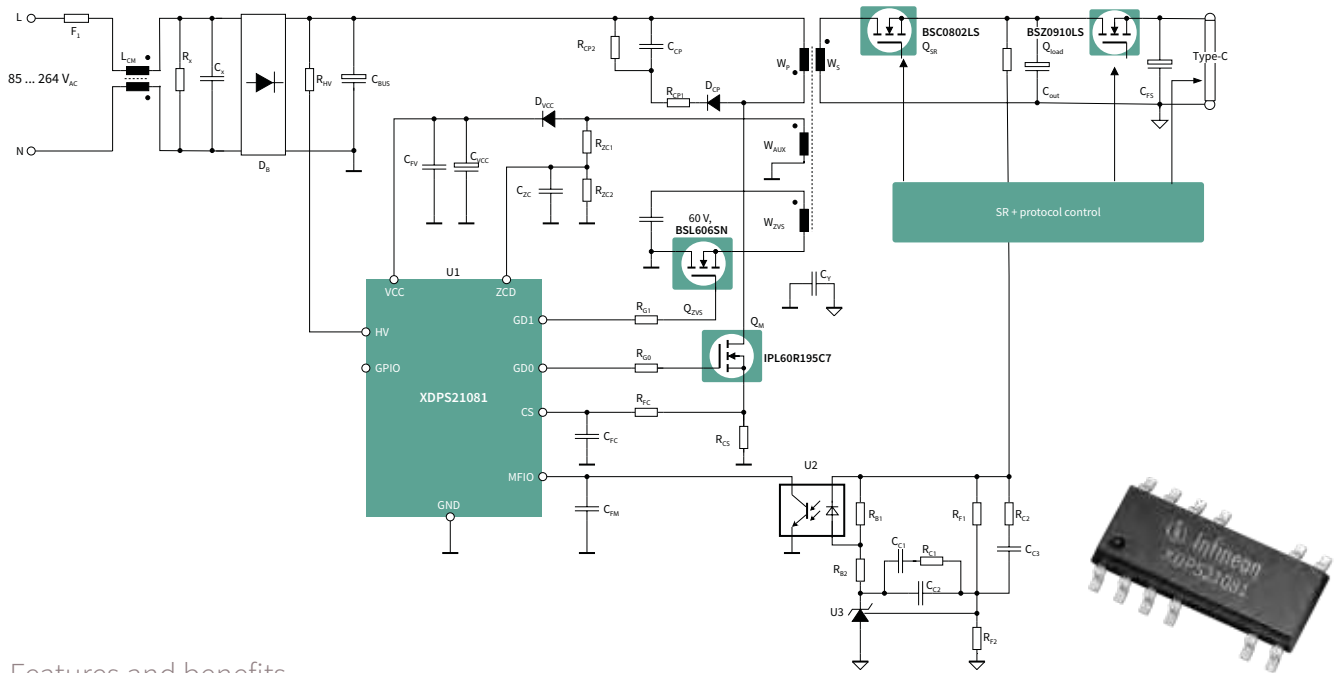

For more details on the product, click on the part number or contact our [product support](#).

XDP™ SMPS

XDPS21081 – digital FQR flyback controller

XDPS21081 is a flyback controller with ZVS (zero-voltage switching) on the primary side to achieve high efficiency with simplified circuitry and economical switches. By driving an external low voltage switch to induce a negative current to discharge the main high voltage MOSFET, switching losses can be reduced further than the traditional valley switching the type of switching scheme. To achieve high efficiency with synchronous rectification, the **XDPS21081** multi-mode digital forced quasi-resonant (FQR) flyback controller IC ensures DCM (discontinued conduction mode) operation via valley detection for a safe and robust operation.

Features and benefits

Key features
> Zero voltage switching
> Frequency law optimization
> Active burst mode operation with multi entry/exit threshold
> Integrated dual MOSFET gate driver
> Easy ZVS implementation with an external 60V MOSFET
> Multiple peak current threshold offset for different output
> CrCM operation with valley detection

Key benefits
> Reduce switching loss and achieve high efficiency
> Optimize efficiency across various line/load condition
> Optimize light and no load efficiency
> Save BOM count and cost with no messy external driver
> Easy to drive, low cost and widely available off the shelf 60 V MOSFET
> Fail safe mechanism to limit output power in the event of PD controller failure
> Avoid CCM operation and no potential of shoot-through with SR MOSFET

REF_XDPS21081_65W1

65W USB-PD Type-C reference design in a small form factor based on **XDPS21081**.

- > Up to 65 W output power with 25W/in³ power density
- > Universal input range 90~264 V_{AC}
- > Supported output: 5 V/3 A, 9 V/3 A, 12 V/3 A, 15 V/3 A and 20 V/3.25 A
- > Peak efficiency > 93%
- > Low no-load standby input power < 65 mW

Ordering code: REF XDPS2108165W1TOB01

XDP™ SMPS

XDPS2201 – digital hybrid flyback controller

XDPS2201 is a multi-mode, digital configurable hybrid flyback controller that combines the simplicity of a traditional flyback topology with the performance of a resonant converter. By utilizing two high-voltage MOSFETs, such as CoolMOS™, the controller can drive both high and low-side MOSFETs in an asymmetric half-bridge flyback topology. Both zero voltage and current switching are achieved through means of regulating the polarity of the magnetizing current to increase efficiency. Also, transformer leakage energy is recycled, thereby further increasing efficiency

Features and benefits

Key features
> Zero voltage and current switching across all line and load conditions
> Multi-mode operation (active burst mode, DCM, ZV-RCS and CRM)
> Integrated high-side driver and 600 V start-up cell
> Single auxiliary transformer winding and resonant cap to supply power to IC
> Comprehensive suite of protection feature sets
> Digital platform with configurable parameters

Key benefits
> Reduce switching loss and achieve high efficiency
> Optimize efficiency across various line/load condition
> Optimize light and no load efficiency
> Save BOM count and cost with no messy external driver
> Easy to drive, low cost and widely available off the shelf 60 V MOSFET
> Fail safe mechanism to limit output power in the event of PD controller failure
> Avoid CCM operation and no potential of shoot-through with SR MOSFET

DEMO_XDPS2201_65W1

65W USB-PD PPS Type-C demo board in a miniature form factor based on **XDPS2201**.

- > Up to 65W output power with 31 W/in³ power density
- > Universal input range 90~264 V_{AC}
- > Supported output: 5 V/3 A, 9 V/3 A, 12 V/3 A, 15 V/3 A and 20 V/3.25 A, 5~20 V / 3 A
- > Peak efficiency > 93.8%
- > Low no-load standby input power < 75 mW

Ordering code: DEMOXDPS220165W1TOB01

DC-DC digital multiphase controllers

Point-of-load power management

Infineon's digital multiphase and multi-rail controllers provide power for today's medium and high current POL applications used in telecom/data-com, server, and storage environments. Infineon's digital controller family enables OEMs and ODMs to improve efficiency and total cost of ownership while increasing power density and optimizing the total system footprint of the voltage regulator. The products highlighted in the table below represent our fifth-generation digital controller family and support up to two rails with 1-6 phases on individual rails. The I2C/PMBus™ interface connects the digital controllers to the application system and provides real-time telemetry information, monitoring, and control capabilities. The digital controllers are fully configurable through our PowerCode™ and PowerClient™ graphical user interfaces that allows for easy-to-use and simplified design optimization.

Multi-phase configurations are supported for best power optimization

Advantages of a digital controller

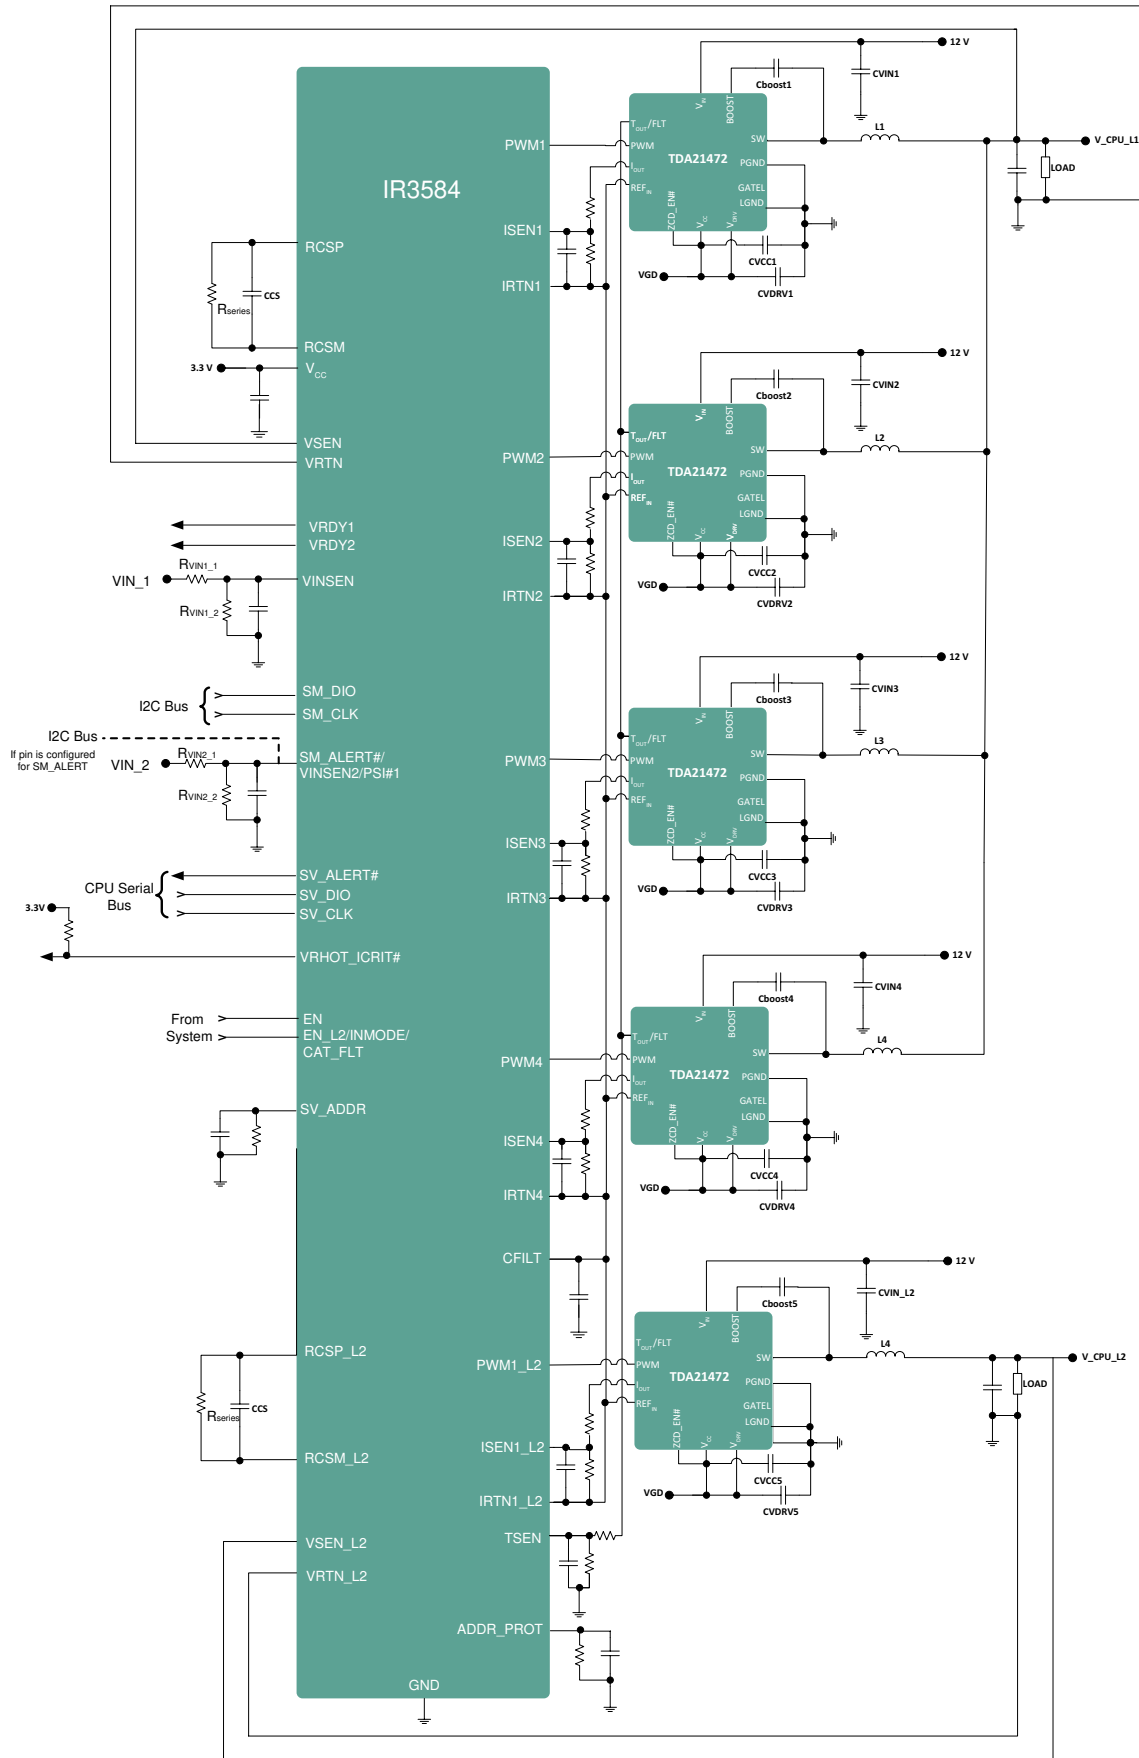

Protection features include a set of sophisticated overvoltage, under-voltage, over-temperature, and overcurrent protection. Each of the controllers in the table above also detects and protects against an open circuit on the remote sensing inputs. These attributes provide a complete and advanced protection feature set for microprocessor, DSP, FPGA, or ASIC power systems. Accurate current sense telemetry achieved through internal calibration that measures and corrects current sense offset error sources upon start-up. Programmable temperature compensation provides accurate current sense information even when using DCR current sense.

Typical multiphase application circuit

AC-DC power management ICs

Technology leadership in power supply

By offering a wide variety of highly efficient control ICs we enable our customer to meet new demands like PFC regulations and ultra low standby power requirements in a very cost effective way. A comprehensive array of safety features helps to minimize the number of external components, reduces design in time and improves the reliability of the SMPS.

Continuous conduction mode (CCM) PFC ICs

High efficiency and very low system cost

Compared to the first generation of **ICE1PCS01/02**, the second generation of CCM PFC controller ICs, **ICE2PCS01/02**, have lower internal reference trimmed at 3V. They also have other advantages such as wider VCC operating range, improved internal oscillator and additional direct bulk capacitor overvoltage protection. Compared to the first and second generation of ICE1PCS0x and ICE2PCS0x, the third generation CCM PFC have the lowest internal reference trimmed at 2.5 V and integrated digital control voltage loop. They also feature low peak current limit at 0.2 V, adjustable gate switching frequency range from 21 kHz to 100 kHz and able to synchronize with external frequency range from 50 kHz to 100 kHz. They are now able to achieve 95 percent efficiency at full load for all input voltage range.

Application diagram

2nd generation continuous conduction mode PFC IC features

- › Fulfills class D requirements of IEC 61000-3-2
- › Lowest count of external components
- › Adjustable and fixed switching frequencies
- › Frequency range from 20 to 250 kHz
- › Versions with brown-out protection available
- › Wide input range supported
- › Enhanced dynamic response during load jumps
- › Cycle by cycle peak current limiting
- › Integrated protections OVP, OCP
- › DIP-8 and DSO-8
- › Lead-free, RoHS compliant

3rd generation continuous conduction mode PFC IC features

- › Fulfills class D requirements of IEC 61000-3-2
- › Integrated digital voltage loop compensation
- › Boost follower function
- › Bulk voltage monitoring signals, brown-out
- › Multi protections such as double OVP
- › Fast output dynamic response during load jump
- › External synchronization
- › Extra-low peak current limitation threshold
- › SO-8 and SO-14
- › Lead-free, RoHS compliant

ICE3PCS02G		0.75 A	OVP	SO-8
ICE3PCS03G		0.75 A	Brown-out	SO-8

5th generation fixed frequency PWM IC and CoolSET™

- › Integrated CoolMOS™ in both 700 V and 800 V MOSFET
- › Cascode configuration for brown-in protection, fast and robust start-up
- › Available in both 100 kHz and 125 kHz fixed switching frequency
- › Frequency reduction in tandem with load reduction to increase efficiency
- › Selectable active burst mode entry/exit profile to optimize standby power and ability to disable
- › Support CCM flyback operation with in-built slope compensation
- › Integrated error amplifier for direct feedback (e.g. non-isolated flyback)
- › Adjustable line input overvoltage protection (only ICE5xRxxxxAG)
- › V_{CC} pin short-to-ground protection
- › Auto restart protection mode to minimize interruption to operation
- › DSO-8 package (standalone controller), DIP-7 and DSO-12 package for CoolSET™

5th generation fixed frequency CoolSET™

Output power ¹⁾ 85 V _{AC} ~300 V _{AC} T _s =50°C	15 W	23 W	27 W	40 W

5th generation quasi-resonant PWM IC and CoolSET™

- > Integrated CoolMOS™ in 800 V MOSFET with cascode configuration
- > Digital frequency reduction with reducing load
- > Novel quasi-resonant to minimize the spread of switching frequency between low and high line AC input
- > Selectable active burst mode entry/exit profile
- > Auto restart mode for line overvoltage protection
- > Auto restart mode for brown-out protection
- > Auto restart mode for V_{CC} under-/overvoltage protection
- > Auto restart mode for open-loop and output overload protection
- > Auto restart mode for overtemperature protection with hysteresis
- > Auto restart mode for output overvoltage
- > Limited charging current during V_{CC} pin short-to-ground protection
- > Peak power limitation with input voltage compensation
- > Minimum switching frequency limitation (no audible noise on power units on/off)
- > DSO package (controller) and DSO-12 (CoolSET™)

5th generation quasi-resonant CoolSET™

Resonant LLC half-bridge controller ICs

Best-in-class converters and controllers to support LLC HB resonant mode topology

Resonant mode power supplies are a variation over SMPS circuits where the switching losses are significantly reduced by adapting zero-voltage or zero-current switching techniques, also known as soft-switching technique. In non-resonant mode SMPS circuits, the switches are subjected to hard switching. LLC HB resonant operates under the ZVS mode, whereby switching loss is reduced to operate converter at a higher switching frequency. In addition, the converter can be further optimized at a high input voltage. This topology allows to eliminate the secondary filter inductor, adopt better rectifier diodes and reduce secondary conduction loss. The converter utilizes leakage and magnetizing inductance of a transformer. With magnetic integration concept, all the magnetic components can be built in one magnetic core.

LLC resonant (no SR)

Application diagram – LLC resonant (no SR)

- > Novel and simple design (12 components + HB driver)
- > Minimum operating frequency is adjustable externally
- > Burst mode operation for output voltage regulation during no load and/or bus overvoltage
- > Multiple protections in case of fault
- > Input voltage sense for brown-out protection
- > Open loop/overload fault detection by FB pin with auto restart and adjustable blanking/restart time
- > Frequency shift for overcurrent protection
- > Lead-free, RoHS compliant package
- > DSO-8 package

Resonant LLC half-bridge controller IC with integrated synchronized rectifier control

LLC resonant + SR

- > Novel LLC/SR operation mode and controlled by primary side controller
- > Multiple protections for SR operation
- > Tight tolerance control
- > Accurate setting of switching frequency and dead time
- > Simple system design
- > Optimized system efficiency
- > Multiple converter protections: OTP, OLP, OCP, latch-off enable
- > External disable for either SR switching or HB switching
- > Lead-free, RoHS compliant package
- > DSO-20 package

LLC half-bridge controller IC	ICE1HS01G-1	ICE2HS01G

OptiMOS™ Powerstage

60 A and 70 A integrated power stages with integrated current and temperature telemetry

Infinion's integrated OptiMOS™ Power stage family contains a synchronous buck gate driver IC which is co-packed with control and synchronous MOSFETs and a Schottky diode to further improve efficiency. The package is optimized for PCB layout, heat transfer, driver/MOSFET control timing, and minimal switch node ringing when layout guidelines are followed. The paired gate driver and MOSFET combination enables higher efficiency at lower output voltages required by cutting edge CPU, GPU, ASIC, and DDR memory designs. The TDA21472 integrated power stages internal MOSFET current sense algorithm, with integrated temperature compensation, achieves superior current sense accuracy versus best-in-class controller-based inductor DCR sense methods. Up to 1.0 MHz switching frequency enables high-performance transient response, allowing miniaturization of output inductors, as well as input and output capacitors while maintaining industry-leading efficiency. The TDA21472 is optimized for CPU core power delivery in server applications. The ability to meet the stringent requirements of the server market also makes the TDA21472 ideally suited for powering GPU, ASIC, DDR memory, and other high current designs.

Features

- › Integrated driver, Schottky diode, control MOSFET and synchronous MOSFET
- › 5 mV/A on-chip MOSFET current sensing with temperature compensated reporting
- › Input voltage (V_{in}) range of 4.5 to 15 V
- › V_{CC} and V_{DR} supply of 4.5 to 7 V
- › Output voltage range from 0.25 up to 5.5 V
- › Output current capability of 70 A
- › Operation up to 1.0 MHz
- › V_{CC} undervoltage lockout (UVLO)
- › 8 mV/°C temperature analog output and thermal flag pull-up to 3.3 V
- › Overtemperature protection (OTP)
- › Cycle-by-cycle self-preservation overcurrent protection (OCP)
- › MOSFET phase fault detection and flag
- › Preliminary overvoltage protection (pre-OVP)
- › Compatible with 3.3 V tri-state PWM input
- › Body-Braking™ load transient support through PWM tri-state
- › Diode emulation mode (DEM) for improved light-load efficiency
- › Efficient dual-sided cooling
- › Small 5.0 x 6.0 x 0.9 mm PQFN package

Applications

- › High frequency, high current, low profile DC-DC converters
- › Voltage regulators for CPUs, GPUs, ASICs, and DDR memory arrays

Part type	Package	I_{out} [A]	V_{in} [V]	V_{out} [V]	Switching frequency [MHz]
TDA21472	5 x 6 x 0.9 mm PQFN	70	4.5 to 15	0.25 to 5.5	1.0
TDA21462 *	5 x 6 x 0.9 mm PQFN	60	4.5 to 15	0.25 to 5.5	1.0

OptiMOS™ Powerstage

70 A power stage with exposed top for improved thermal performance

Infineon's TDA21475 exposed-top power stage contains a low quiescent-current synchronous buck gate driver IC co-packaged with high-side and low-side MOSFETs. The package is optimized for PCB layout, heat transfer, driver/MOSFET control timing, and minimal switch node ringing when layout guidelines are followed. The gate driver and MOSFET combination enables higher efficiency at the lower output voltages required by cutting-edge CPU, GPU, and DDR memory designs. The TDA21475 internal MOSFET current sense algorithm with temperature compensation achieves superior current sense accuracy versus best-in-class controller-based inductor DCR sense methods. Protection includes cycle-by-cycle over current protection with programmable threshold, V_{CC}/V_{DRV} UVLO protection, bootstrap capacitor undervoltage protection, phase fault detection, IC temperature reporting, and thermal shutdown. The TDA21475 also features auto replenishment of the bootstrap capacitor to prevent over-discharge. The TDA21475 features a deep-sleep power-saving mode, which greatly reduces the power consumption when the multiphase system enters PS3/PS4 mode. Operation at switching frequency as high as 1.5 MHz enables high-performance transient response, allowing reduction of output inductance and output capacitance while maintaining industry-leading efficiency. The TDA21475 is optimized for CPU core power delivery in server applications. The ability to meet the stringent requirements of the server market also makes the TDA21475 ideally suited for powering GPU and DDR memory designs.

Features

- › Co-packaged driver, high-side and low-side MOSFETs
- › 5 mV/A on-chip MOSFET current sensing with temperature compensated reporting Input voltage (V_{IN}) range of 4.25 to 16 V
- › V_{CC} and V_{DRV} supply of 4.25 to 5.5 V
- › Output voltage range from 0.25 up to 5.5 V output current capability of 70 A operation up to 1.5 MHz
- › V_{CC}/V_{DRV} undervoltage lockout (UVLO) Bootstrap capacitor undervoltage protection 8 mV/°C temperature analog output
- › Thermal shutdown and fault flag
- › Cycle-by-cycle over current protection with programmable threshold and fault flag MOSFET phase fault detection and flag
- › Auto replenishment of bootstrap capacitor Deep-sleep mode for power saving Compatible with 3.3 V tri-state PWM input Body-Braking™ load transient support Small 5 x 6 x 0.65 mm PQFN package
- › Lead-free RoHS compliant package
- › Integrated driver, Schottky diode, control MOSFET and synchronous MOSFET

Applications

- › High frequency, high current, low profile DC-DC converters
- › Voltage regulators for CPUs, GPUs, ASICs, and DDR memory arrays

Part type	Package	I_{out} [A]	V_{in} [V]	V_{out} [V]	Switching frequency [MHz]
TDA21475 *	5 x 6 x 0.9 mm PQFN	70	4.25 to 16	0.25 to 5.5	1.5

OptiMOS™ Powerstage

20 A power stage with integrated current sense

Infineon's IR35401 integrated power stage contains a synchronous buck gate driver IC, which is co-packaged with control and synchronous MOSFETs and Schottky diode to further improve efficiency. The package is optimized for PCB layout, heat transfer, driver/MOSFET control timing, and minimal switch node ringing when layout guidelines are followed. The paired gatedriver and MOSFET combination enables higher efficiency at lower output voltages required by cutting edge CPU, GPU and DDR memory designs. The IR35401 power stage features an integrated current sense amplifier to achieve superior current-sense accuracy against best-in-class controller-based inductor DCR sense methods while delivering the clean and accurate current report information. The protection features inside IR35401 include VCC UVLO and thermal flag. IR35401 also features an auto replenishment of bootstrap capacitor to prevent the bootstrap capacitor from overdischarging. The IR35401 supports deep-sleep mode and consumes <100 µA VCC bias current when the EN pin is pulled low. Up to 1.5 MHz switching frequency enables high performance transient response, allowing miniaturization of output inductors, as well as input and output capacitors while maintaining industry-leading efficiency. When combined with Infineon's digital controllers, the IR35401 incorporates the Body-Braking™ feature through PWM tri-state which enables reduction of output capacitors. The IR35401 is optimized for low current CPU rails in server applications. The ability to meet the stringent requirements of the server market also makes the IR35401 ideally suited for powering GPU and DDR memory rails.

Applications

- › General purpose POL DC-DC converters
- › Voltage regulators for CPUs, GPUs, ASICs, and DDR memory arrays

Features

- › Integrated driver, control MOSFET and synchronous MOSFET
- › Integrated bootstrap synchronous PFET
- › Inductor DCR current sensing with temperature compensation
- › Input voltage (V_{IN}) range from 4.25 to 16 V
- › V_{CC} supply of 4.25 to 5.5 V
- › Output voltage range from 0.5 to 3 V or up to 5.5 V if the internal current sense amplifier is not used
- › Local lossless inductor current sensing with improved noise immunity and accuracy
- › Single reference based current reporting output
- › Output current capability of 20 A
- › Operation up to 1.5 MHz
- › V_{CC} undervoltage lockout
- › Over-temperature and VCC UVLO fault communication to controller via TOUT pin
- › Compatible with 3.3 V tri-state PWM Input
- › Body-Braking™ load transient support through PWM tri-state
- › Auto-replenishment on BOOST pin
- › Low operating quiescent current and <100 µA when disabled
- › Small 4 x 5 x 0.9 mm PQFN package
- › Lead-free RoHS compliant package

Part type	Package	I_{out} [A]	V_{in} [V]	V_{out} [V]	Switching frequency [MHz]
IR35401 *	4 x 5 x 0.9 mm PQFN	20	4.25 to 16	0.5 to 5.5	1.5

OptiMOS™ Powerstage

25 A, 35 A, 40 A integrated power stages with highest efficiency on smallest form factor

Infineon's **TDA21240** powerstage is a multichip module that incorporates Infineon's premier MOSFET technology for a single high-side and a single low-side MOSFET coupled with a robust, high performance, high switching frequency gate driver in a single PG-IQFN-30-2 package. The optimized gate timing allows for significant light load efficiency improvements over discrete solutions. When combined with Infineon's family of digital multi-phase controllers, the **TDA21240** forms a complete core voltage regulator solution for advanced micro and graphics processors as well as point-of-load applications.

Features

- › For synchronous buck converter step down voltage applications
- › Maximum average current of 40 A
- › Input voltage range +4.5 V to +16 V
- › Power MOSFETs rated 25 V
- › Fast switching technology for improved performance at high switching frequencies (> 500 kHz)
- › Remote driver disable function
- › Includes bootstrap diode
- › Undervoltage lockout
- › Shoot through protection
- › +5 V high side and low side MOSFETs driving voltage
- › Compatible to standard +3.3 V PWM controller integrated circuits
- › Tri-state PWM input functionality
- › Small package: PG-IQFN-30-2 (4 x 4 x 1 mm)
- › RoHS compliant
- › Thermal warning

Applications

- › Desktop and server VR buck converter
- › Single-phase and multiphase POL
- › CPU/GPU regulation in notebook, desktop graphics cards, DDR memory, graphic memory
- › High power density voltage regulator modules (VRM)
- › Qualified for DC-DC industrial applications based on JEDEC (JESD47, JESD22, J-STD20)
- › General purpose POL DC-DC converters

Part type	Package	I _{out} [A]	V _{in} [V]	Switching frequency [MHz]
TDA21242	4 x 4 x 1 mm PQFN	25	4.5 to 16	1.0
TDA21241	4 x 4 x 1 mm PQFN	35	4.5 to 16	1.0
TDA21240	4 x 4 x 1 mm PQFN	40	4.5 to 16	1.0

DC-DC converters

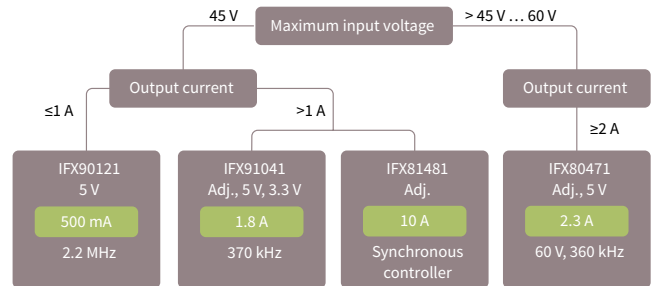

Robust range of controllers and regulators for the widest application spectrum

Our high-efficiency switching regulators and controllers help to reduce energy consumption. In addition to extending the operating time of battery powered systems, they also significantly improve the thermal budget of the application. Overall, this translates into minimal operating costs. For your design flexibility, they are available as adjustable voltage variants as well as with dedicated fixed output voltage values.

Integrated POL voltage regulators

Highest density high efficiency integrated POL (IPOL) for smart enterprise systems

Infineon's integrated POL switching converters deliver benchmark efficiency and dramatically reduce system size. Solutions up to 35 A are available in compact PQFN packages. Target applications include server, storage, routers and switches, telecom base stations, digital home media, mobile computing and embedded data processing. Solutions with and without PMBus™ digital communication are available in single output and multi-rail format.

Integrated point-of-load converters IR3806x series (6 A/15 A/25 A/35 A)

Digital interface IPOL voltage regulators

The digital interface IPOL devices are easy-to-use, fully integrated and highly efficient DC-DC regulator offering I2C/PMBus™, parallel VID, Intel SVID. The on-board PWM controller and MOSFETs make the family a space-efficient solution, providing accurate power delivery for low output voltage and high current applications.

The IR3806x family of PMBus™ enabled IR MOSFET™ IPOL based IR MOSFET IPOL voltage regulators offers:

- › Compactness of integrated controller, driver and MOSFETs
- › High performance analog voltage mode engine
- › Flexibility of a rich PMBus™ interface

The IR381(2/3)6x family features OptiMOS™ 5 for the highest efficiency and adds Intel SVID support (IR381(/3)6x) for Intel based systems or parallel VID (IR3826x) for voltage scaling or 8 programmable output voltages booting options to avoid programming at start up. Pin compatible options with and without PMBus™ are available to allow the flexibility of using PMBus™ only during evaluation or easily upgrade a system to PMBus™ without re-layout.

Features and benefits

Key features
› PMBus™ revision 1.2 compliant
› ≥ 66 PMBus™ commands
› Wide input voltage range and single 5 V – 16 V input operations
› Differential remote sense
› Ultralow jitter voltage mode engine
› Operation temp: -40° to 125° C

Key benefits
› Only single chip solution with extensive PMBus™, parallel VID, Intel SVID support allows 50 percent space saving versus external power competition
› Intel SVID support for Intel-based systems
› Parallel VID or PMBus™ for voltage setting and margining
› Telemetry status via digital bus
› Remote monitoring and update
› Parameter changes by register
› Flexible sequencing
› High accuracy low ripple
› Integrated sequencing, margin, current and voltage monitoring

OptiMOS™ IPOL voltage regulators with COT

Easy to use with no external compensation and smallest BOM

OptiMOS™ [IR3883MTRPBF](#), [IR3887MTRPBF](#)*, [IR3889MTRPBF](#), and [IR3888MTRPBF](#) integrated point-of-load DC-DC devices are easy-to-use, fully integrated and highly efficient DC-DC regulators that operate from a wide input voltage range and provide up to 30 A continuous current. The devices increase efficiency and power density and simplify design for POL applications in server, enterprise storage, netcom router and switches, datacom and telecom base stations.

Block diagram IR3883M

Block diagram IR3887M (30 A)

Main benefits

Main benefits
> Compensation free and stable with all ceramic caps
> Scalable solution from 3A up to 40A.
> For designs requiring high density, low cost and easy design, the family includes a 3A device with Enhanced Stability Constant-on-Time (CoT) engine that does not require external compensation enabling easy designs and fast time to market.
> Quiescent current down to 5 μ A
> Overload, over temperature, short circuit and reverse-polarity protection
> Low current consumption
> Extended temperature range -40°C ... +125°C

OPTIREG™ switcher power supply ICs

High-efficiency solutions for harsh environments

Infineon offers optimized DC-DC converters that are designed specifically for harsh automotive environments. Wide input voltage range, optimized feature set, and extended qualification make our DC-DC converters perfectly suitable for multiple applications. Our DC-DC portfolio contains various products that operate in step-down (buck), step-up (boost), or a combination of those (buck-boost/sepic). High integration, efficiency, and flexibility are the main benefits of our products.

OPTIREG™ linear voltage regulators

Energy-efficient voltage regulators and trackers

Our linear voltage regulators and trackers help to reduce energy consumption, extending operating time and minimizing operating costs across all kinds of systems. The wide supply voltage range, low quiescent current, rich protective feature set and choice of packages make our devices the perfect fit across a broad application spectrum, apart from automation systems as well for health care, traffic, power tools, lighting and many other multi-market systems. Our trackers are ideal as additional supplies for off-board loads to increase system reliability

OPTIREG™ linear voltage regulators (selection tree)

Features and benefits

Key features
> Input voltage up to 60 V
> Output current up to 1.5 A
> Output voltage adjustable or fixed to specific values
> Quiescent current down to 5 μ A
> Overload, overtemperature, short circuit and reverse-polarity protection
> Low current consumption
> Extended temperature range -40°C ... +125°C

Key benefits
> Pin-to-pin compatibility with industry-standard parts
> Very low dropout voltage trackers for optimized heat distribution and external protection
> Trackers for maximum system cost reduction
> Small robust packages

Integrated class D audio amplifier ICs

Cooler, smaller and lighter class D audio amplifiers for great sounding products

Infineon's MERUS™ audio solutions enable audio designers to improve the performance of their products, while increasing efficiency and reducing solution size. Advances in semiconductor processes in combination with new innovative architectures are behind a portfolio of class D technologies that allow professional, commercial/home and portable audio applications to benefit from unparalleled performance, power density and reliability. The broad portfolio covers power ranges from 20W to 2kW per channel from the smallest single-chip devices and multi-chip module (MCMs) to highly scalable discrete audio amplifier solutions consisting of powerful MOSFET/CoolGaN™ enhancement mode (e-mode) HEMT and driver ICs combinations.

By combining our core principles, competencies, and leadership in groundbreaking power semiconductors with revolutionary audio amplifier technologies, such as MERUS™, we provide solutions that are smaller, lighter, more robust and flexible, running with less heat dissipation. In addition to outstanding quality and reliability, Infineon's amplifier solutions are designed to maximize power efficiency and dynamic range while providing best-in-class performance in product form factors that make them an optimal fit for any high-end application. These include portable/battery powered applications, voice controlled active speakers, television sets, stereo HiFi, soundbars, monitors, power-over-ethernet (PoE) and multichannel systems.

Design with Infineon's solutions to benefit from:

- 
 Exceptional audio performance
- 
 Maximized power efficiency
- 
 Maximized output power
- 
 Design freedom
- 
 Fast time to market

Integrated MERUS™ multilevel amplifier ICs for class D audio solutions

High power efficiency and density in small packages

With its revolutionary MERUS™ integrated multilevel class D audio amplifier ICs, Infineon is leading in efficiency and power density. Compared to traditional class D amplifier ICs, which produce only two voltage output levels, multilevel amplifier ICs use additional on-chip MOSFETs and capacitors to produce outputs with a higher signal granularity i.e. higher switching frequencies and/or multiple output signal levels - typically up to five voltage levels

Filterless topology with “flying capacitor” of an integrated class D IC

Features and benefits

Key features
> Multilevel switching technology
> Scalable signal “granularity”
> Proprietary circuits architecture

Key benefits
> Highest efficiency and power density
> Potential LC filter removal
> Low THD+N
> Cooler operation
> Low power loss
> Virtually no switching loss measurable in idle mode

Efficiency where it matters for audio reproduction

For MERUS™ integrated multilevel audio amplifier ICs, amplifier efficiency at average output power is key. As the graph on the left shows, MERUS™ multilevel amplifier is much more effective than the traditional class D amplifier, which translates into less power consumption in AC input and in battery powered audio applications.

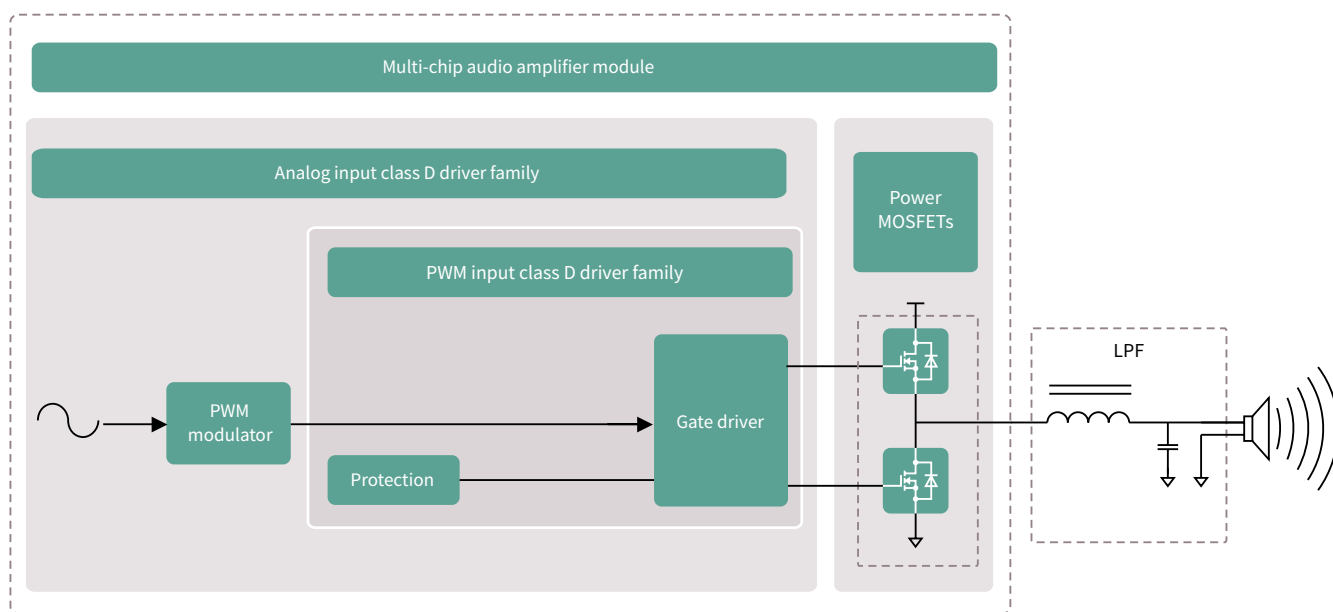

MERUS™ integrated audio amplifier multi-chip modules (MCM)

Integrated components for scalable output power and superb audio performance

Multi-chip modules integrate PWM controller and power MOSFETs in a single package to offer a highly efficient, compact solution that reduces component count, shrinks PCB size up to 70 percent, and simplifies class D amplifier design.

Multi-chip audio amplifier module

Features and benefits

Key features
> Single package with integrated PWM controller and audio-performance-optimized power MOSFET
> Overcurrent protection
> Thermal shutdown
> Floating differential input
> Clip detection
> Best-in-class power efficiency and audio performance
> Lower component count, leading to design simplification
> Compatible with single supply or split rail configuration
> Click noise reduction

Key benefits
> Extended battery playback time
> Unrivalled audio performance
> Smaller solution size (BOM reduction, system level cost savings)
> Eliminated need for heatsink
> High noise immunity
> Reliable operation
> Thermal efficiency

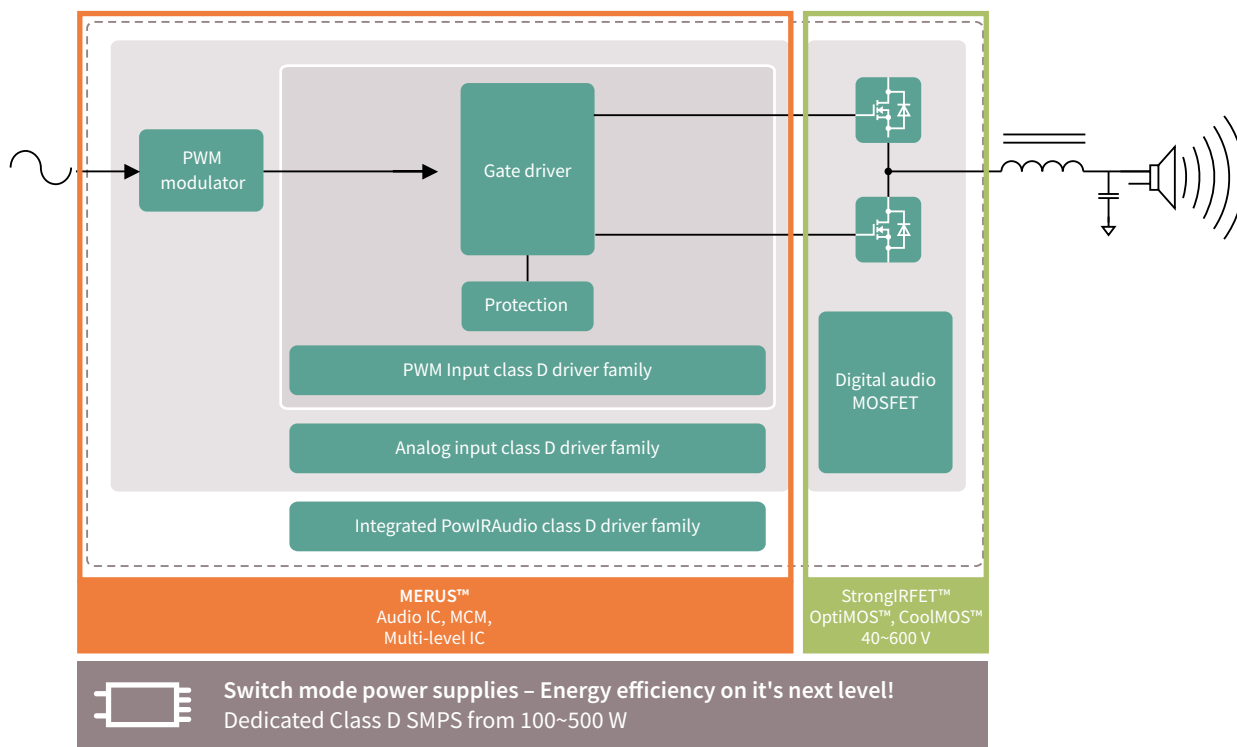

Discrete MERUS™ audio amplifier driver ICs with MOSFET and gallium nitride CoolGaN™ 400 V e-mode HEMTs

Scalable output power with a unified design platform

Infinion's discrete audio solutions are scalable to various output power levels, simply by replacing the external MOSFETs or CoolGaN™ e-mode HEMTs of the driver-transistor combinations. Key parameters for the transistors used in discrete class D audio applications include on-state resistance ($R_{DS(on)}$), gate charge (Q_G), and reverse recovery charge (Q_{rr}). Our products are specifically suitable for class D audio applications and optimized for these parameters to achieve maximized efficiency, THD and EMI amplifier performance. The CoolGaN™ 400 V e-mode HEMTs portfolio is specifically built for class D audio requirements, with high performing SMD packages to fully utilize the benefits of gallium nitride.

Audio solution overview

Features and benefits

Key benefits
> Unified design platform
> Scalable output power up to over 2 kW per channel
> Simple yet effective - exchange of external MOSFET triggers alteration in output power level
> Best-in-class power efficiency

Key advantages
> Superior audio performance
> Increased reliability
> Unique audio experience

AC-DC LED driver IC

Digital and mixed signal, single- and dual-stage high voltage control ICs for LED drivers

XDP™ digital power – digital single- and dual-stage flyback combo controllers

The XDP™ portfolio of high performance digital power control ICs addresses today's challenges such as smart or connected lighting, meeting demanding LED driver requirements with a unique set of features.

Mixed-signal control ICs for solid-state lighting luminaires

Infineon's mixed-signal control ICs for LED drivers deliver excellent power quality and high efficiency for LED lighting applications supporting dimming levels down to 1%. The integration of advanced functions saves external components and minimizes system cost. The wide variety of features and functions gives the option to choose the best fitting part for the application.

ICL8800/ICL8810/ICL8820

Single-stage flyback LED controllers for constant voltage output

ICL88xx family of single-stage flyback controllers for constant voltage output is tailored for LED lighting applications to meet the required performance cost-effectively. All three ICs offer benchmarking performance for power factor correction and total harmonic distortion at full-load as well as at low-load conditions. With their comprehensive set of protection features (compare table below) and bottom-up design, they are easy to design-in and require a minimum number of external components. The controllers are optimized as secondary-side regulated (SSR) constant voltage (CV) output flyback controllers and are also well suited for primary-side regulation (PSR).

Additionally, the controllers' low standby power due to the integrated BM (in [ICL8810](#), [ICL8820](#)) is ideally suited for smart lighting systems' requirements. The jitter function (in [ICL8820](#)) eases the design of emergency lighting LED drivers without additional circuitry. It fulfills EMI requirements in DC operation and improves the EMI performance.

Typical application schematic

Features and benefits

Key benefits	Key advantages
<ul style="list-style-type: none"> Optimized for SSR CV output flyback operation, additionally suited for PSR PF > 0.9 and THD < 10% across a wide load range (AC input up to 277 V_{rms}) CCM and QRM with smart valley hopping ICL8810 contains also burst mode (BM) to ensure low standby power (< 100mW) ICL8820 contains also built-in jitter function 	<ul style="list-style-type: none"> Low BOM for wide range of applications with PFC functionality where dual stage topologies are required Enables platform design and window drivers Optimum efficiency and low EMI at low BOM without compromising light quality ICL8810 enables in addition: smart lighting in connection with microcontrollers (stand-by power < 500mW, i.e. more power budget for additional components) ICL8820 enables in addition: Fulfillment complying with EMI regulations in DC operation at low cost and effort

ICL5102

High performance PFC + resonant controller for LCC and LLC

With **ICL5102** Infineon offers a highly integrated combo controller IC with a universal input of 70V to 325V, which allows manufactures to realize global designs, keeping cost for product variety and stock low. Highest efficiency of up to 94 percent by resonant topology, a THD factor less than 3.5 percent and a high power factor of more than 0.95 allow for more lumen output and less thermal load, enabling cost effective designs and keeping cost for LEDs and heat sink low. Thanks to the high integration, there is no need for additional expensive components in PFC and LLC stage, reducing the overall BOM cost. In addition integrated protection features complement the **ICL5102** features.

Typical application schematic

Features and benefits

Key features and benefits

▶ Small form factor LED driver and low BOM

The high level of integration assures a low count of external components, enabling small form factor designs and making them ideal for compact and slimline power supplies for lighting, such as LED driver for indoor and outdoor applications

▶ High performance, digital PFC and advanced HB driver

The high performance digital PFC stage achieves power factor of 99 percent, through operation in CrCM and DCM mode, in a frequency range of 22 to 500 kHz. This supports stable operation even at low-load conditions down to 0.1 percent of the nominal power without audible noise

▶ Fast time-to-light and low standby

With start-up current of less than 100 μ A the controller provides very fast time-to-light within less than 300 ms, while standby the controller changes into active burst mode which reduces power consumption to less than 300 mW

▶ Safety first

The controller has a comprehensive set of protection features built in to increase the system safety. It monitors in the run mode the complete system regarding bus over- and undervoltage, open loop, overcurrent of PFC and/or inverter, output overvoltage, overtemperature and capacitive load operation

ICL5102HV

High performance PFC + resonant controller for LCC and LLC, supporting 980 V high side

ICL5102HV control IC for LED drivers offers a unique one-package solution for lighting applications up to 350 W, supporting LLC/LCC topology. It is particularly designed to deliver best performance of total harmonic distortions (THD) and power factor (PF). Compared to level-shifter technology, the integrated coreless transformer not only further reduces the loss at high operation frequency, but also enhances the capability of handling huge negative voltage (-600 V on HSGND). Reduce the number of external components to optimize form factor and reduce bill of material (BOM) with the integrated two-stage combination controller (PFC + LLC/LCC) for lighting applications. Simplify your design and shorten time-to-market.

Typical application schematic

Features and benefits

Key features and benefits

XDP™ LED

The IC family XDP™ is the first all-in-one package solutions combining a digital controller with key power peripherals. Such integration provides exceptional flexibility and performance. The XDP™ family addresses essential features for advanced LED driver.

XDPL8105 – digital flyback controller IC for LED driver

The **XDPL8105** is a digital, single-stage flyback controller with high power factor for constant current LED driver. The device offers versatile functions for different indoor and outdoor lighting applications. The IC is available in a DSO-8 package and it provides a wide feature set, requiring a minimum of external components. The advanced control algorithms in the digital core of the **XDPL8105** provide multimode operation for high efficiency. Configurable parameters allow last minute changes, shorten the product development and reduce hardware variants. The extensive set of configurable standard and sophisticated protection mechanisms ensure safe, reliable and robust LED driver device for diverse use cases.

Typical application schematic

Features and benefits

Key features and benefits
> Constant current with primary side regulation
> Supports AC and DC input
> Nominal input voltage range 90-305 V _{AC} or 120-350 V _{DC}
> Integrated 600 V start-up cell
> Power factor > 0.9 and THD < 15 percent over wide load range
> Highly accurate primary side control output current typ. ± 3 percent
> Reference board efficiency > 90 percent
> Internal temperature guard with adaptive thermal management
Multimode operation
> QRM (quasi-resonant mode)
> DCM (discontinuous conduction mode)
> ABM (active burst mode)
Digital parameters
Relevant error conditions are monitored and protected
> Undervoltage
> Overvoltage
> Open load
> Output shorted

XDPL8210 – digital flyback constant current controller IC for LED driver with 1 percent dimming

The **XDPL8210** is a digital, single-stage, quasi-resonant flyback controller with high power factor and high precision primary side controlled constant current output. The IC is available in a DSO-8 package and it provides a wide feature set, which requires only a small number of external components. Sophisticated algorithms provide flicker-free dimming below one percent. The driver fully supports IEC61000-3-2 class C designs. The limited power mode improves functional safety, while configurable parameters allow last minute changes, shorten the product development and reduce hardware variants. The extensive set of configurable standard and sophisticated protection mechanisms ensure safe, reliable and robust LED driver for a large set of use cases.

Typical application schematic

Features and benefits

Key features and benefits
> Constant current with primary side regulation
> Supports AC and DC input
> Nominal input voltage range 90-305 V _{AC} or 90-430 V _{DC}

XDPL8219 – PFC/flyback controller with enhanced total harmonic distortion

The **XDPL8219** is a digital high-performance secondary-side regulated flyback controller with constant voltage output. With its high power-factor the controller is the perfect fit for cost-effective, dual-stage LED drivers and enables for instance smart lighting applications. The device operates in quasi-resonant mode (QRM) to maximize the efficiency and minimize the electromagnetic interference (EMI) over a wide load range. It enters active burst mode (ABM) at light load to prevent audible noise from being heard, while achieving no-load standby power as low as <math><100\text{mW}</math>. **XDPL8219** is available in a DSO-8 package.

Typical application schematic

Features and benefits

Key benefits	Key benefits
<ul style="list-style-type: none"> > Secondary-Side-Regulated (SSR) constant voltage (CV) output > Flyback controller with power factor correction > Depending on load condition, either quasi-resonant, discontinuous conduction mode or active burst mode (ABM) > Integrated 600V start-up cell 	<ul style="list-style-type: none"> > Supporting wide load range and fast and stable reaction to dynamic load changes > PF > 0.9 and THD < 10% across a wide load range (AC input up to 277 Vrms) > Optimal efficiency, power factor and THD can be achieved by best-suited mode. XDPL8221 - digital dual stage multi-mode flyback controller for CC, CV, LP with 1 percent dimming and serial interface

The **XDPL8221** is a digital, highly integrated, future-proof device combining a quasi-resonant PFC with a quasi-resonant flyback controller with primary side regulation. A serial communication interface supports direct communication with an external microcontroller unit (MCU). The **XDPL8221** is especially designed for advanced LED driver in smart lighting or IoT applications, featuring flicker-free dimming down to 1 percent of nominal current. The device enables customizable LED driver and simplifies the generation and maintenance of different variants without increasing the number of stock keeping units. The IC is available in a DSO-16 package.

DC-DC LED driver ICs

DC-DC switch mode LED driver ICs with efficiencies up to 98%, dimming level down to 0.5%

Infineon offers highly integrated DC-DC LED driver ICs that support currents up to 1.5A, making these drivers the ideal choice for high- and ultra-high-power LEDs. These highly integrated DC to DC driver ICs achieve efficiency levels as high as 98% across a wide range of operation conditions. Integrated smart thermal protection, along with overvoltage and overcurrent protection contribute to a longer LED lifetime.

Go for quality with Infineon's cost-efficient linear LED driver ICs

Infineon's BCR linear driver ICs are the best choice for driving LED strings supplied by a DC voltage source. The BCR regulators are suitable for driving currents from 10mA to 250mA. That is why they are the best solution for low- and mid-power LEDs. For high-power LEDs instead, the linear controller ICs in combination with an external power stage allow for the greatest design flexibility.

ILD8150/ILD8150E – 80 V DC-DC buck LED driver IC for high-power LEDs and high-performance hybrid dimming

The **ILD8150** is 80 V DC-DC converter IC, designed to be used in LED applications to drive high power LEDs. For applications operating close to safe extra low voltage (SELV) limits, it provides a high safety voltage margin. The buck LED driver IC is tailored for LEDs in general lighting applications with average currents up to 1.5 A using a high-side integrated switch. Several performance and protection features provide the right fit for professional LED lighting.

The hysteretic current control provides an extremely fast regulation and stable LED current combined with good EMI performance. The efficiency of the LED driver IC is remarkably high, reaching more than 95 percent efficiency over a wide range. A PWM input signal between 250 Hz and 20 kHz controls dimming of the LEDs current in analog mode from 100 to 12.5 percent and 12.5 to 0.5 percent in PWM mode with flicker-free modulation frequency of 3.4 kHz.

Digital PWM dimming detection with high resolution makes **ILD8150/E** the perfect LED driver IC for use together with microcontrollers. Precise output current accuracy from device to device under all loads and input voltage conditions makes it perfect for tunable white and flat panel designs where current must be identical string to string.

Features and benefits

Linear current regulators

60 V linear LED controller IC with active headroom control for power- and cost-efficient linear regulation on DC-DC side

A unique feature of **BCR601** is to provide feedback to the primary side via an optocoupler to control the output voltage of the primary side converter, e.g. **XDPL8219** or **ICL88xx**. The integrated control loop minimizes the voltage overhead and power dissipation of the external driver transistor. This capability, coupled with the adjustment of voltage overhead by external configuration according to application needs, leads to power- and cost-efficient LED systems. AC line ripple suppression, analog dimming option and various protection features round up this device for LED drivers allowing for flicker-free light and longevity of LEDs.

Features and benefits

Key features and benefits	
>	Active headroom control (supports an optocoupler feedback loop to primary side minimizing power losses)
>	Dimming in pure analog mode down to 3%
>	Suppresses the voltage ripple of the power supply driving a constant LED current for high light quality
>	The embedded hot plug protection allows plug in and plug out of any LED load during operation without damaging the LEDs
>	Supports wide current range depending on external driver transistor
>	Supply voltage range up to 60 V
>	Gate driver current 10 mA
>	LED current can be adjusted by Rset functionality
>	Overtemperature protection and adjustable overvoltage protection

Order information for BCR601

Type	Description	Ordering code
BCR601	60 V linear LED controller IC with voltage feedback to primary side	BCR601XUMA1

BCR601/BCR602 – 60 V linear LED controller ICs for Tunable White plus active headroom control and flexible dimming

BCR601 is a linear controller that enables high efficiency at low cost as a second-stage LED controller to replace DC-DC buck converters especially in low- to mid-power LED drivers. The cost-effectiveness especially in multichannel designs can be further enhanced by using **BCR602** in a tiny SOT23-6 package regulating the LED current for flicker-free deep dimming performance.

Features and benefits

Key benefits
> BCR601 as the master controller controls voltage overhead of both channels and current of one channel
> BCR602 as slave controller regulates current of second channel
> Input voltage up to 60 V
> Can be operated with either BJT or N-channel MOSFET
> Analog dimming down to 3%, PWM dimming down to 1% (BCR602)
> Current precision $\pm 3\%$
> OTP, OVP, hot-plug protection

Key advantages
> Linear regulators give considerable cost advantage over buck topology
> Cost advantage increases with additional channels
> Efficiency can be on par with buck (depends on output ripple of first stage)
> Highest light quality, zero ripple
> Deep, full analog dimming
> Easy to extend to additional outputs (e.g. RGBW)

BCR40x and BCR43x linear LED driver ICs for low power LEDs

The BCR40x family is the smallest size and lowest cost series of LED drivers. These products are perfectly suited for driving low power LEDs in general lighting applications. Thanks to AEC-Q101 qualification, it may also be used in automotive applications such as brake lights or interior.

The advantage over resistor biasing is:

- › Long lifetime of LEDs due to constant current in each LED string
- › Homogenous LED light output independent of LED forward voltage binning, temperature increase and supply voltage variations

The advantage versus discrete semiconductors is:

- › Reduced part count and assembly effort
- › Pretested output current
- › Defined negative temperature co-efficient protection

Needing more details on replacing resistors?

Download now the application note "Driving low power LEDs from 10 to 65 mA LED driver ICs with BCR401W and BCR402W family"

Features and benefits

Key features and benefits
› Output current from 8 to 100 mA (adjustable by external resistor)
› Supply voltage up to 18 V (BCR401W, BCR402W) and up to 40 V (BCR401U, BCR402U, BCR405U, BCR430U, BCR431U *)
› Reduction of output current at high temperature, contributing to long lifetime LED systems
› Extra low voltage drop for more voltage headroom and flexibility in designs (BCR430U, BCR431U)
› Excellent ESD performance on device and system level for BCR43xU
› Very small form factor packages with up to 750 mW max. power handling capability

LED current versus voltage drop ($V_s = 24\text{ V}$)

The voltage drop at the integrated LED driver stage can go down to 135 mV at 50 mA and less improving the overall system efficiency and providing extra voltage headroom to compensate for tolerances of LED forward voltage or supply voltage. With the BCR430U and BCR431U, additional LEDs can be added to lighting designs or longer LED strips can be created without changing the supply voltage.

 ** Ultra low voltage drop version BCR431U with only 115 mV at 15 mA

BCR32x/BCR42x/BCR450/BCR601/BCR602 linear LED driver and controller ICs for medium and high power LEDs

The BCR32x and BCR42x LED drivers are dedicated linear regulators for 0.5 W LEDs with a maximum output current of 250 mA. They are optimized in terms of cost, size and feature set for medium power LEDs in general lighting applications. Thanks to AEC-Q101 qualification, it may also be used in automotive applications such as brake lights or interior.

Typical application schematic

Features and benefits

Key features and benefits	
>	Output current from 10 mA up to 300 mA for BCR32x (200 mA for BCR42xU), adjustable by external resistor
>	Supply voltage up to 40 V for BCR42x (24 V for BCR32x)
>	Direct microcontroller interface for PWM dimming with BCR321U/BCR421U
>	Reduction of output current at high temperature, contributing to long lifetime LED systems
>	Dedicated 60 V devices targeting 48 V systems BCR601 for LED Driver/ BCR602 for LED Module
>	Very small form factor packages with up to 1000 mW max. power handling capability

CDM10V and CDM10VD – most flexible dimming interface ICs for 0-10 V input

Infinion's fully integrated dimming solutions

Infinion's **CDM10V** and **CDM10VD** are the industry's first single-chip lighting interface ICs. They are capable of transforming an analog 0–10 V input into a PWM or dimming input signal, required by a lighting controller IC. **CDM10V** and **CDM10VD** devices are dedicated for commercial and industrial LED lighting applications. The compact and highly integrated devices allow designers to replace up to 25 discrete components, used in conventional 0–10 V dimming schemes, with a single device. Supplied in an ultra-miniature 6-pin SOT package, the CDM10Vx and CDM10VDx perfectly match small PCBs with high component densities.

Typical application schematic using CDM10V

Features and benefits

Key benefits	Key advantages
<ul style="list-style-type: none"> Active dimming (0–10 V) and passive dimming (resistor) Embedded digital signal processing which maintains minimum variations from device to device PWM input One-time configurable device: CDM10V and preconfigured devices with various feature sets 	<ul style="list-style-type: none"> Single-device solution leading to low BOM and PCB savings Dimming ICs in small SOT-23 package for high power density designs Granular portfolio for highest flexibility and easy design-in Wide input V_{CC} range 11–25 V, extended range down to 6 V for CDM10V Attractive pricing and faster time to market

NFC-PWM configuration ICs

Dual-mode NFC wireless configuration ICs with CLO function and pulse width modulation (PWM) output for lighting applications

The **NLM0011** is a dual-mode NFC wireless configuration IC with PWM output. It is compatible with existing analog LED-driver designs and with the NFC-programming specification from the Module-Driver Interface Special Interest Group (MD-SIG). This device is primarily designed for LED applications to enable NFC programming. In addition, advanced features such as the constant lumen output (CLO) as well as the on/off counting are integrated, and there is no need for an additional microcontroller. Since the **NLM0011** is designed to work together with mainstream analog driver ICs, there are no firmware development efforts needed. It can be easily adapted into existing designs to replace the “plug-in resistor” current configuration concept. The **NLM0010** is a light version without CLO function.

Typical example of NFC lighting application

Features and benefits

Key benefits	Key advantages
<ul style="list-style-type: none"> > Configurable pulse width modulation (PWM) output > NFC contactless interface compliant to ISO/IEC 18000-3 mode 1 (ISO/IEC 15963) > Constant light output (CLO) with 8 configurable points > Integrated operation-time counter (OTC) and on/off counter > Non-volatile memory (NVM) including UID and 20 bytes free memory for user data 	<ul style="list-style-type: none"> > Fast and cost effective implementation of NFC programming and CLO without the need of an additional microcontroller > Compatible with most analog LED driver designs using “plug-in resistor” method > Stable PWM output with fixed 2.8 V amplitude and +/-0.1% duty cycle accuracy > Internal voltage regulator (LDO) to avoid influence of instable external supply voltage

EVAL_NLM0011_DC – evaluation board demo kit

This evaluation board not only enables fast demonstration of NFC-PWM configuration ICs with **NLM0011** through the NFC-PWM mobile app, but also accelerates the development of the NFC-reader software. EVAL_NLM0011_DC does not require a full system, but allows NFC configuration for existing LED driver boards.

Ordering code: EVALNLM0011DCTOBO1

Type	Description	Package	Ordering code
NLM0011	Dual mode NFC configuration IC with PWM output and CLO function	SOT23-5	NLM0011XTSA1
NLM0010	Dual mode NFC configuration IC with PWM output, without CLO function	SOT23-5	NLM0010XTSA1

CIPOS™ IPM family

CIPOS™ Intelligent Power Modules in different packages, voltage and current classes

Infineon has a broad portfolio of integrated power modules (IPMs) with different semiconductors combined in various packages in varying voltage and current classes. These IPMs are separated into Compact, Standard and Performance families.

Part of the IPMs is divided into the CIPOS™ Nano, CIPOS™ Micro, CIPOS™ Tiny, CIPOS™ Mini and CIPOS™ Maxi families. The CIPOS™ IPMs are families of highly integrated, compact power modules designed to drive motors in applications ranging from home appliances, fans, pumps, HVAC to industrial drives. These energy-efficient intelligent power modules integrate the latest power semiconductor and ICs technologies

CIPOS™ product overview

Key benefits

- > Shorter time-to-market
- > Increased reliability
- > Reduced system design complexity
- > Improved manufacturability

CIPOS™ Nano

Ultra compact three-phase or half-bridge MOSFET IPMs

The ultra-compact CIPOS™ Nano is a family of highly integrated power modules for high-efficiency consumer and light industrial applications. With half-bridge and three-phase configurations, CIPOS™ Nano is designed for the rectifier, converter, and inverter stage in power management circuits and motor drives for applications like fans, hair dryers, air purifiers, and circulation pumps. By implementing an innovative Power QFN package, which utilizes PCB copper traces to dissipate heat from the module, CIPOS™ Nano family delivers a new benchmark in device size, offering up to a 60 percent smaller footprint than existing three-phase motor control power IPMs.

The family is comprised of a series of fully integrated three-phase or half-bridge surface-mount motor control circuit solutions. The new alternative approach utilizes PCB copper traces to dissipate heat from the module, providing cost savings through a smaller package design and even eliminating the need for an external heat sink.

Features and benefits

Key benefits	Key advantages
<ul style="list-style-type: none"> > Various switch technologies such as HEXFETs, Trench FREDFETs, Trench MOSFETs, CoolMOS™ and OptiMOS™ apply to motor drivers 	<ul style="list-style-type: none"> > Smallest modules in the market

CIPOS™ Micro

Solution for low power motor drive applications

CIPOS™ Micro is a family of compact, three-phase IPMs (intelligent power modules) for low-power (i.e. up to 500 Watts with heatsink) motor drive applications including ventilation fans, circulation pumps, air purifiers, dishwashing machines, and refrigerator compressor drives. CIPOS™ Micro has several protection features including precise overcurrent protection and a UL-certified temperature sensor. Available in both surface mount and through-hole configurations, the family features rugged and efficient high voltage MOSFETs and IGBTs specially optimized for variable frequency drives with voltage ratings of 250 V-600 V. Also, these IPMs utilize high-voltage gate drivers tuned to achieve an optimal balance between EMI and switching losses.

Features and benefits

Key features	Key benefits

CIPOS™ Tiny

Maximum efficiency and design flexibility

The energy-efficient CIPOS™ Tiny is a family of advanced IPMs (Intelligent Power Modules) developed with a focus on higher module efficiency and long-term reliability. The combined benefits of advanced trench IGBT technology and optimized package design have enabled us to achieve best-in-class efficiency and improved reliability, along with minimized system size and cost. Integrating discrete power semiconductors and drivers into one package allows designers to reduce the time and effort spent on design, significantly reducing the time-to-market. CIPOS™ Tiny offers a high-performance AC motor-drive solution for applications such as washing machines, air conditioners, refrigerators, and industrial drives ranging from 6 A to 20 A current requirements.

A built-in high precision temperature monitor and over-current protection feature, along with short-circuiting rated IGBTs and an integrated under-voltage lockout function, deliver a high level of protection and fail-safe operation. System mechanical design flexibility is also considered by offering both CIPOS™ Tiny SIP and DIP form factors.

Features and benefits

Key features	Key benefits
> Compact IPM with current rating up to 20 A	> Offer excellency thermal performance
> Over current shutdown	> Offer better design flexibility with various lead length options
> Built-in temperature sensor	> Offer system size and cost saving
> Low power losses, efficient operation, short circuit rated	
> Under-voltage lockout and shutdown pin	

Key applications

- > Refrigerator
- > Washing machine
- > Fan and pump
- > General purpose drive

Package overview

CIPOS™ Mini

Broad range of configurations from PFC to inverter

CIPOS™ Mini is a family of high efficient intelligent power modules that has the highest power density with 4 A to 30 A rated products built into a single package platform. It integrates various power and control components to increase reliability, and optimize PCB size and system costs. Utilizing multiple configurations, CIPOS™ Mini IPMs apply to a wide range of applications to control variable speed drives, such as air conditioners, washing machines, refrigerators, vacuum cleaners, compressors, and industrial drives up to 3 kW.

The configurations offered within the CIPOS™ Mini family are 2-phase MOSFET, 3-phase MOSFET, and IGBT, integrated PFC, and 2-phase and 3-phase interleaved PFC. All options include an integrated gate driver and a built-in temperature sensor. CIPOS™ Mini provides optimized performance for power applications, which need good thermal conduction and electrical isolation, but also EMI-safe control, innovative FAULT indication, and overload protection.

Our TRENCHSTOP™ IGBTs, reverse-conducting IGBTs, or CoolMOS™ power MOSFETs are combined with newly optimized Infineon SOI gate driver IC for excellent electrical performance. Also, CIPOS™ Mini family offers IPMs with DCB substrates, improving heat dissipation to provide higher power capability.

Features and benefits

Key features	Key benefits
<ul style="list-style-type: none"> > Wide range of current rating: 4 A to 30 A 	<ul style="list-style-type: none"> > Lower PCB size and system cost
<ul style="list-style-type: none"> > High integration (bootstrap circuit, thermistor, single boost PFC) 	<ul style="list-style-type: none"> > Easy power extension from 300 W to 3 kW
<ul style="list-style-type: none"> > Optimized for target application requirements (separate version for washing machine and air conditioner) 	<ul style="list-style-type: none"> > Optimized performance for each application

- > General purpose drive

Package overview

CIPOS™ Maxi

Smallest package in 1200 V IPM class while still offering high power density and best performance

The high-performance CIPOS™ Maxi intelligent power modules (IPMs) integrate various power and control components to increase reliability, optimize PCB size and system costs. CIPOS™ Maxi IPMs are designed to control three-phase AC motors and permanent magnet motors in variable speed drive applications such as low-power industrial motor drives, pumps, fan drives, and active filters for HVAC (heating, ventilation, and air conditioning). The product concept is specially adapted to power applications, which need excellent thermal performance and electrical isolation as well as meeting EMI requirements and overload protection.

The existing IGBT-based portfolio IM818 series offers 5 A and 15 A in 1200 V class up to 3.0 kW power rating. In 2020, the first 1200 V Silicon Carbide IPM IM828 series in the same package based on CoolSiC™ MOSFET technology was launched, it can offer over 4.8 kW power rating. CIPOS™ Maxi has achieved the smallest package in 1200 V IPM class while still offering high power density and the best performance.

Features and benefits

Key benefits
> Fully isolated dual in-line molded module with DCB
> 1200 V TRENCHSTOP™ IGBT 4
> Rugged 1200 V SOI gate driver technology
> Integrated bootstrap functionality
> Overcurrent shutdown
> Under-voltage lockout at all channels
> All of six switches turn-off during protection
> Cross-conduction prevention
> Independent NTC for temperature monitoring
> Allowable negative VS potential up to -11 V for signal transmission at V _{BS} of 15 V
> Low side emitter pins accessible for all phase current monitoring (open emitter)
> Programmable fault clear timing
> Enable input

Key advantages
> The smallest package size in 1200 V IPM class with high power density and best performance
> Enhanced robustness of gate driver technology for excellent protection
> High efficiency
> Adapted to high switching application with lower power loss
> Simplified design and manufacturing
> Time-to-market

Key applications

- > Fan and pump
- > HVAC outdoor fan
- > Low-power general purpose drives (GPI, servo drive)
- > Active filter (active power factor correction) for HVAC

Motor control ICs

Solutions for motor control systems in automotive, consumer and industrial applications

iMOTION™ products for industrial and consumer motor control applications

iMOTION™ products are offered in several integration levels on both hardware as well as software. The hardware integration ranges from stand-alone motor controllers up to fully integrated inverters in the SmartIPMs. On software offering, Infineon is providing full turnkey solutions as well as freely programmable modules. Using the turnkey products that are based on the patented and field proven motor control engine (MCE) and assisted by powerful tools like MCEWizard and MCEDesigner the implementation of a variable speed drive is reduced to configuring the respective motor. Infineon provides complete solutions for motor control with its combined offering of iMOTION™ together with EiceDRIVER™ gate drivers, TRENCHSTOP™ IGBTs, CoolMOS™ MOSFETs and CIPOST™ IPMs.

DC and BLDC motor driver ICs

Power bridges for all kind of motors in automotive and industrial applications from 100 mA up to 70 A with different feature sets scaled to your needs. Choose from our single and multi half-bridge ICs, integrated full-bridge drivers, Motor System ICs or multi MOSFET drivers.

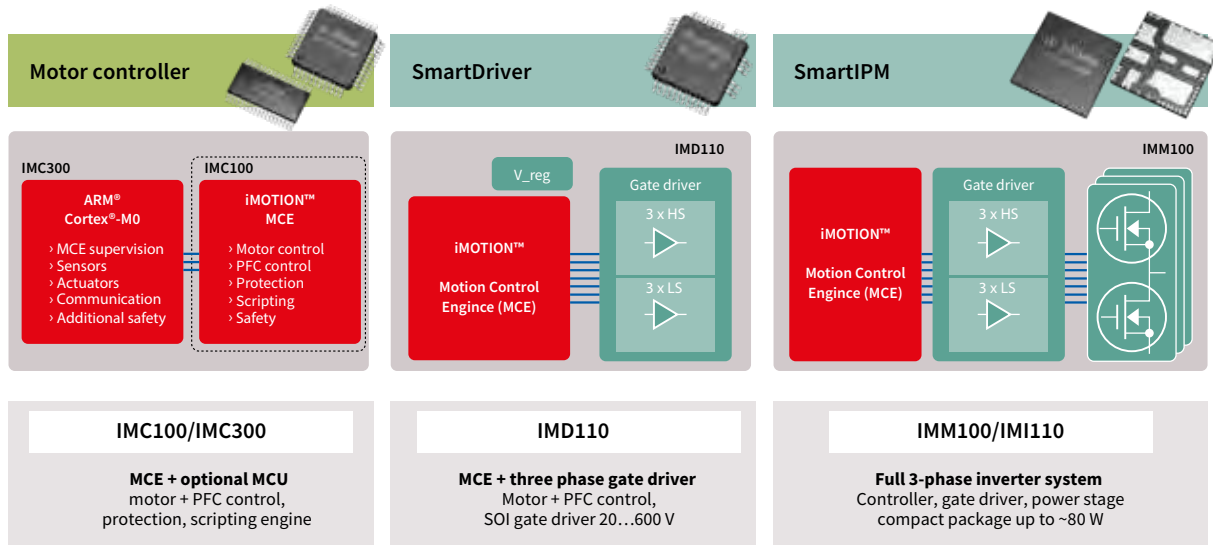

Embedded Power ICs (system-on-chip)

Embedded Power ICs based on Arm® Cortex®-M integrate on a single die a 32-bit microcontroller, non-volatile flash memory, analog and mixed-signal peripherals, communication interfaces along with driving stages needed for either relay, half-bridge or full-bridge DC and BLDC motor applications. The devices are specifically designed to enable motor control applications where a small package form factor and a minimum number of external components are essential. See more on [Embedded Power ICs](#) solutions in the Microcontroller section.

iMOTION™

Flexible and scalable platform for motor control solutions

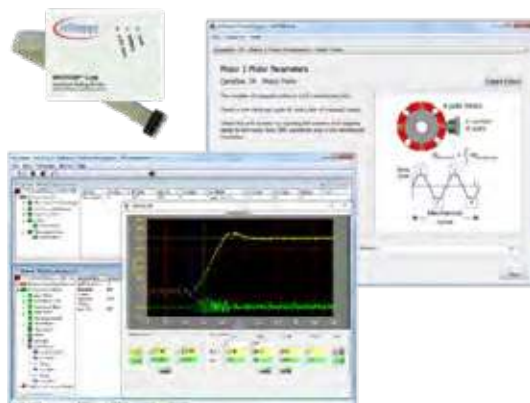

iMOTION™ products integrate all required hardware and software functions for the control of a variable speed drive (VSD). Infineon's field proven Motion Control Engine (MCE) eliminates software coding from the motor control development process reducing the research and development efforts to the configuration for the respective motor. The MCE implements highly efficient control of the motor and an optional power factor correction (PFC) and integrates all necessary protections and a flexible scripting engine. Configuration options allow the use of single or leg shunt current measurement as well as sensorless or hall-based field oriented control (FOC). Assisted by powerful tools like MCEWizard and MCEDesigner it is possible to have the motor up and running in less than an hour. Integrated support for functional safety for home appliances paves the way to meet regulations in the global market.

Features and benefits

Key features
> Ready-to-use and field-proven motor control solution
> Multiple integrated protection features
> Functional safety acc. IEC/UL 60730 supported
> Scalable - from motor to scripting, PFC and additional MCU
> Various integration levels - from motor controller to SmartIPM
> iMOTION™ controller – run with any gate driver and power stage
> iMOTION™ SmartIPM – highest integration level

Key benefits
> Fastest time to market
> Easy to use – no motor control coding required
> High performance and energy-optimized solution
> Reduced cost of ownership due to R&D savings
> Easy adaptation to differing application requirements
> Highest flexibility for low or high voltage drives
> Reduced system cost due to minimum BOM count and PCB size

PC tools and evaluation kits are available to configure, test and fine-tune the drive inverter.

MCEWizard

SW tool to generate initial drive control parameters

MCEDesigner

SW tool to test, monitor and fine-tune the motor drive including trace features for live monitoring

iMOTION™ Link

Isolated debug interface to iMOTION™ devices

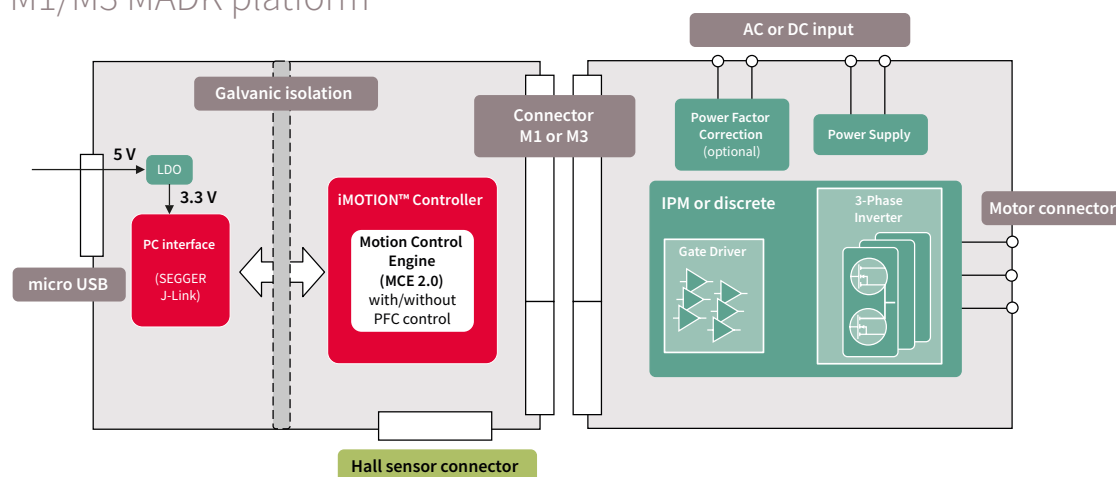

iMOTION™ Modular Application Design Kit

Infineon's motor control evaluation platform

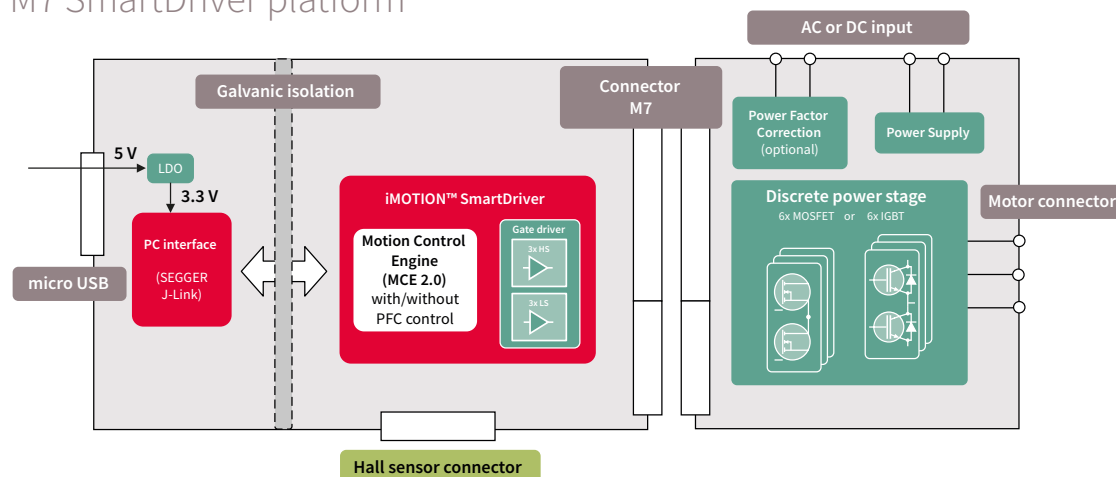

The iMOTION™ Modular Application Design Kit (MADK) evaluation platform targets variable speed-drive applications up to 2 kW. The platform offers a modular and scalable system solution with different control board options and a wide range of power boards. Using the iMOTION™ MADK standardized platform interfaces, different control and power boards can be combined in a system that perfectly meets the requirements of the application. This modular approach allows developers maximum flexibility and scalability during evaluation and development phase at affordable costs.

While the M1 platform provides control of a permanent magnet synchronous motor (PMSM), the M3 platform additionally includes the power factor correction (PFC) implemented as a CCM boost PFC. Boards with M7 connector are available with and without PFC.

Single half-bridge IC

Protected high current half-bridge for industrial applications

The NovalithIC™ provides a complete, low-ohmic protected half-bridge in a single package (typ. path resistance at 25°C down to 10 mΩ). It can also be combined with an additional NovalithIC™ to create a H-bridge or three-phase bridge. The NovalithIC™ family has the capability to switch high-frequency PWM while providing overcurrent, overvoltage and overtemperature protection. The NovalithIC™ family offers cost-optimized, scalable solutions for protected high-current PWM motor drives with very restrictive board space. Due to the P-channel high-side switch the need for a charge pump is eliminated thus minimizing EMI. The latest addition to the NovalithIC™ family is the **IFX007T**, which is optimized for industrial applications.

Application example for high-current PWM motor drives

BLDC Motor Control Shield with IFX007T for Arduino

The BLDC Motor Control Shield is a high current motor control board compatible with Arduino and Infineon's XMC4700 Boot Kit. It is equipped with three smart **IFX007T** half-bridges. The BLDC Motor Control Shield is capable to drive one BLDC motor. Alternatively, it can be used to drive one or two bidirectional DC motors (H-Bridge configuration, cascaded to support second motor) or up to three unidirectional DC motors (half-bridge configuration). The implemented integrated NovalithIC™ **IFX007T** half-bridges can be controlled by a PWM via the IN-pin.

Features

Key features
Capable of high frequency PWM, e.g. 30 kHz
Adjustable slew rates for optimized EMI by changing external resistor
Driver circuit with logic level inputs
Diagnosis with current sense

Target applications

- › Brushed DC motor control up to 250 W continuous load
- › 24 V nominal input voltage (max. 6 V–40 V)
- › Average motor current 30 A restricted due to PCB (**IFX007T** current limitation @ 55 A min.)

BLDC-SHIELD_IFX007T

BLDC motor control with half-bridge **IFX007T**

Infineon's shields for Arduino are compatible with microcontroller boards using the Arduino-compatible form factor, e.g. Infineon's XMC™ microcontroller kits.

Multi half-bridge ICs

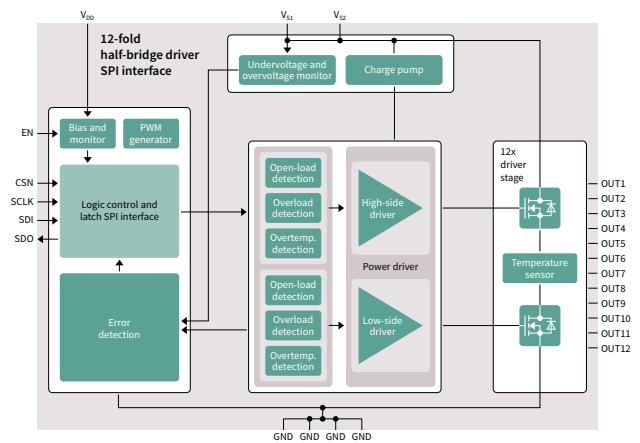

Extensive offering ranging from two-fold half-bridge ICs to twelve-fold half-bridge ICs

The TLE94xyz are protected half-bridge drivers designed for 12 V motion control applications such as small DC motors for heating, ventilation and air conditioning (HVAC), as well as automotive mirror adjustment and fold. The family offers two-, three-, four-, six-, eight-, ten-, and twelve-fold integrated half-bridge driver. All devices can drive DC motor loads up to 0.9 A per output or the outputs can be used stand-alone or combined to increase driving capability up to 3.6 A. They provide diagnosis of short circuit, open load, power supply failure and overtemperature for each half-bridge to ensure safe operation in HVAC or other systems. The TLE94xyz offers enhanced EMC performance, which in combination with the low quiescent current and a small package makes the product attractive for a wide range of 12 V automotive and industrial applications. In addition to TLE94xyz, Infineon's multi half-bridge offerings includes a dual half-bridge driver, [TLE4207G](#).

Infineon's portfolio of multi half-bridge ICs

Block diagram TLE94112ES

Features and benefits

Key features and benefits	
>	Three-, four-, six-, eight-, ten-, and twelve-fold half-bridges with integrated output stages and PWM
>	16-bit SPI or direct inputs for control and diagnosis
>	Voltage supply range: 5.5- 20 V
>	Variable driving schemes for up to 11 motors

Key applications

- > 12 V automotive and industrial applications
- > Flap motors in HVAC systems
- > Mirror adjustment and fold
- > Small DC motors (≤ 0.9 A/output)
- > Bistable relays
- > Bipolar stepper motors in full-step and half-step mode

DC Motor Control HAT with TLE94112ES

Complies with Raspberry Pi HAT specification

The Infineon Motor Control HAT with [TLE94112ES](#) complies with Raspberry Pi HAT specification and provides you with unique evaluation experience. It is equipped with 12-fold half-bridge driver [TLE94112ES](#) and comes with a ready-to-use software library. The HAT is also equipped with an Infineon [TLS4125D0EP V50](#), a synchronous step-down converter which can power the Raspberry Pi.

Features and benefits

Key features
› Twelve half bridge power outputs, 0.9A each (combinable to up to 3.6A)
› Wide input voltage range of 5.5V to 20V
› Powering of Raspberry Pi by TLS4125D0EP V50
› Reverse polarity protection
› Driver is protected against over-temperature, over-current, over-voltage, under-voltage and enables diagnosis of over-current, over-voltage, under-voltage
› SPI interface with zero clock diagnosis
› Enhanced EMC performance
› Integrated PWM generator with 3 different frequencies (80Hz, 100Hz, 200Hz)

Benefits
› Compact design for multi-motor applications
› Quick and easy setup for evaluation and demo applications
› Wide range of applications

Target applications

- › Automotive motor control: HVAC flap control
- › Multi-motor applications
- › DC motors and voltage controlled bipolar stepper motors
- › Toys

Integrated full-bridge driver

General purpose 6 A H-bridges

IFX9201SG is a general purpose 6 A H-bridges for industrial applications, home appliance and building automation, power tools battery management and medical applications, designed to control small DC motors and inductive loads. The outputs can be pulse width modulated at frequencies up to 20 kHz, which enables operation above the human sonic range by means of PWM/DIR control. While the signal at the DIR input defines the direction of the DC motor, the PWM signal controls the duty cycle. For load currents above the current limitation threshold (8 A typically), the H-bridges switch into chopper current limitation mode.

Applications examples

Features

Key features	
>	Up to nominal 36 V supply voltage
>	Short circuit, overtemperature protection and undervoltage shutdown
>	Detailed SPI diagnosis or simple error flag
>	Simple design with few external components
>	Small and robust DSO-12-17 (IFX9201SG) and DSO-36-72 (IFX9202ED) packages

Product number	Operating voltage	Current limit (min.) [A]	Quiescent current (typ.) [µA]	Operating range [V]	R _{DS(on)} (typ./switch) [mΩ]	Package	R _{thJC} (max.) [K/W]

H-BRIDGE KIT 2GO with IFX9201SG

Build your own DC motor control with the H-bridge Kit 2GO, a ready-to-use evaluation kit. It is fully populated with all electronic components equipped with the H-bridge IFX9201 combined with XMC1100 microcontroller based on Arm® Cortex®-M0 CPU. It is designed for the control of DC motors or other inductive loads up to 6 A or up to 36 V of supply.

Target applications

- > DC motor control for industrial applications
- > Home and building automation
- > Power tools battery management
- > Industrial robotic applications
- > Electric toys applications

Ordering code: HBRIDGEKIT2GOTOBO1

KIT_XMC1300_IFX9201

Stepper Motor Control Shield with IFX9201SG and XMC1300 for Arduino

The Stepper Motor Control Shield from Infineon is one of the first high current stepper motor control boards being compatible to Arduino as well as to Infineon's XMC1100 boot kit. The Stepper Motor Control Shield is capable to drive the two coils in a stepper motors featuring dual-half bridge configuration. The implemented integrated IFX9201 half-bridges can be controlled by a STEP-signal via the STEP pin. Interfacing to a microcontroller is made easy by the integrated XMC1300 microcontroller that holds the peripherals to allow high-speed current control. Microstepping of the stepper motor can be achieved using the internal comparators, while operational amplifiers are installed to adapt the motor current sense signal to the microcontroller's input levels.

Features and benefits

Key features
> Compatible with microcontroller boards using the Arduino form factor, e.g. Infineon's XMC™ microcontroller kits
> Capable of high frequency PWM, e.g. 30 kHz
> Adjustable slew rates for optimized EMI by changing external resistor
> Driver circuit with logic level inputs
> Diagnosis with current sense

Key benefits
> Fast and inexpensive prototyping of stepper motor control
> Simple testing of microstepping algorithms
> Diagnose pin to allow hardware feedback during development
> Overtemperature shutdown with latch behavior and undervoltage shutdown of the power section

Target applications

- > Stepper motors up to 5 A phase current
- > 24 V nominal input voltage for the power stage
- > Average motor current 3 A without additional cooling effort, 5 A possible with proper cooling

KITXMC1300IFX9201TOBO1

Motor System ICs

(BL)DC Motor System IC combines power supply, communication and multiple half-bridge MOSFET drivers

Infineon's Motor System IC family offers high integration and high performance with optimized system cost for DC and BLDC motor control applications. All devices of the Motor System IC family feature a low-dropout voltage regulator with an output current of 250 mA/5 V. The communication interface incorporates a CAN FD transceiver up to 5 Mbit/s according to ISO 11898-2:2016 (including Partial Networking (PN) option) and/or a LIN transceiver.

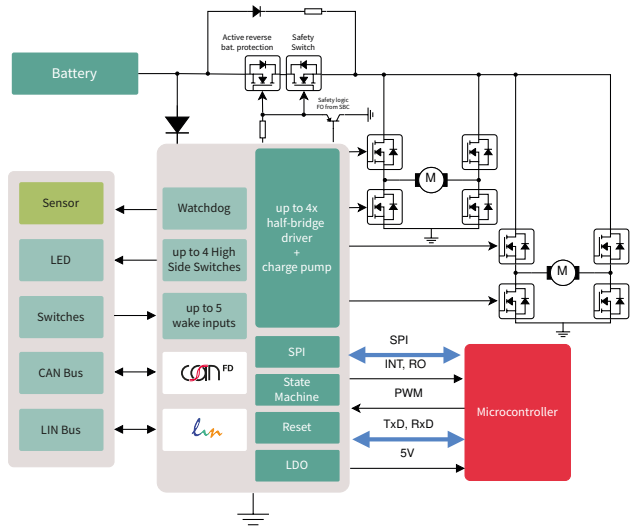

Features

Features
> 5 V linear regulator up to 250 mA
> CAN FD up to 5 Mbps > CAN PN and FD tolerant ("3" variants)
> LIN2.2B/J2602
> TLE9560/1/2: up to 4 half-bridge gate drivers with adaptive MOSFET control up to 100 mA constant gate charge
> TLE9563/4: 3-phase gate driver with CSA and adaptive MOSFET control up to 150 mA constant gate charge
> Up to 4 high-side switches (with 7 on-resistance) > Up to 5 wake inputs
> Up to 6 PWM inputs

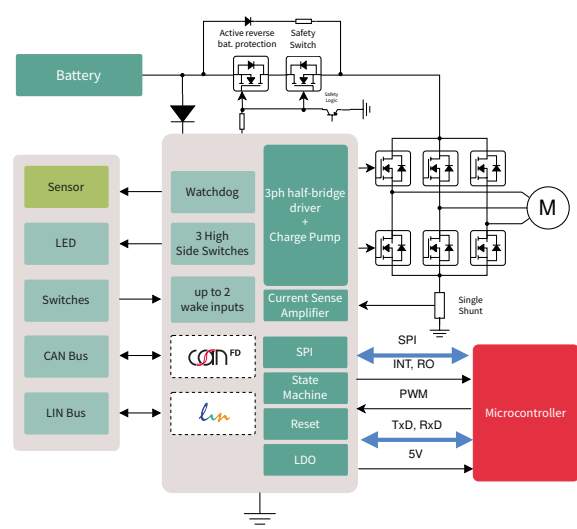

Benefits
> PCB savings up to 50 percent due to unique integration approach
> Lower switching losses and EMC optimization due to adaptive MOSFET control
> Automatic regulation of MOSFET pre-charge currents diminish need for production MOSFET calibration
> VS monitoring in sleep mode activates MOSFET to prevent from ECU damage when motor is in generator mode

DC and BLDC Motor Control Shields and Evaluation Boards with TLE9562-3QX and with TLE9563-3QX

The purpose of these boards is to provide a quick evaluation solution for lab assessments. The evaluation boards offer a unique two in one solution: They can be connected via a UIO stick with the computer to evaluate features via ConfigWizard (a graphical user interface) which can be found in the Infineon Toolbox. In addition, the evaluation boards feature an Arduino Shield interface for rapid prototyping.

Summary of features BLDC Motor Control Shield with TLE9563-3QX

- › Operating voltage range 5.5-28 V with 5 V compatible logic input
- › Integrated reverse polarity protection with onboard EMC filter
- › Three integrated half-bridges MOSFET (2 in 1 MOSFET package)
- › 5 mΩ low-side current sense
- › High-Power RGB led driven by integrated High-Side switches
- › Onboard Back-EMF detection circuit and connector for HALL-sensor
- › Arduino example codes available

Sales Product Name: [BLDC SHIELD_TLE956X](#)

Ordering Code: BLDCSHIELDTLE956XTOBO1

Summary of features DC Motor Control Shield with TLE9562-3QX

- › Operating voltage range 5.5-28V with 5V compatible logic input
- › Integrated reverse polarity protection with onboard EMC filter
- › Four integrated half-bridge MOSFETs (2 in 1 MOSFET package)
- › Easy interfacing of CAN and LIN transceiver
- › Miniaturization / Shrink of the PCB Area
- › Arduino example codes available

Sales Product Name: [DC SHIELD_TLE956X](#)

Ordering Code: DCSHIELDTLE956XTOBO1

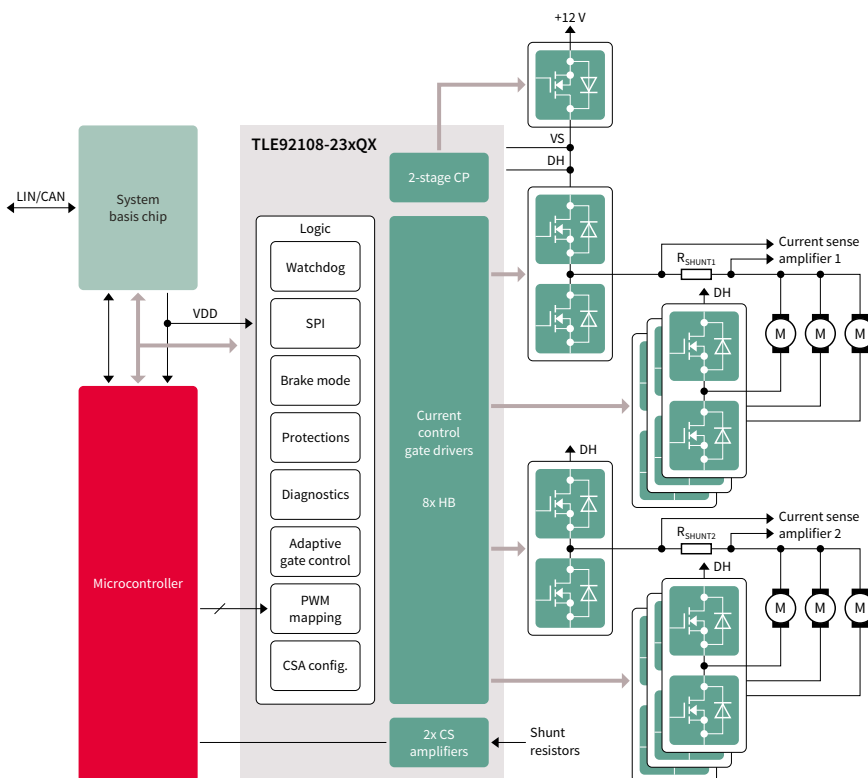

Benefits of DC and BLDC Motor Control Shields

- › 2 in 1 board with GUI & Arduino interface for evaluation and rapid prototyping
- › 50% reduced internal operating current consumption
- › Simplified & cost efficient ground network
- › Smaller package size for area savings
- › Very low quiescent current in sleep-mode

Multi MOSFET Driver

Multiple half-bridge drivers designed to control up to eight half-bridges

Infineon's TLE9210x is a family of Multi MOSFET Driver ICs, designed to control up to eight half-bridges (up to 16 n-channel MOSFETs) with one packaged device. Having only one device for several half-bridges enables further savings, such as less pick & place costs as well as less required PCB area compared to discrete solutions. TLE92108 and TLE92104 multiple MOSFET driver offer a reliable and cost optimized solution with state of the art diagnostic and protection. The devices of the TLE9210x family are pin and software compatible. Further, the product family allows motor cascading: with TLE92108 (8 half-bridges), up to 7 motors can be driven.

Product table

Type	Description	Brake mode	Package	Ordering Code

Intelligent power switches and modules

- › ISOFACE™ isolated industrial interface
- › Industrial PROFET™
- › HITFET™
- › ISOFACE™, Industrial PROFET™ and HITFET™ product portfolio

ISOFACE™ isolated industrial interface

Output switches and digital input ICs offering unmatched system uptime, reliability and shortened product launch time by 50%

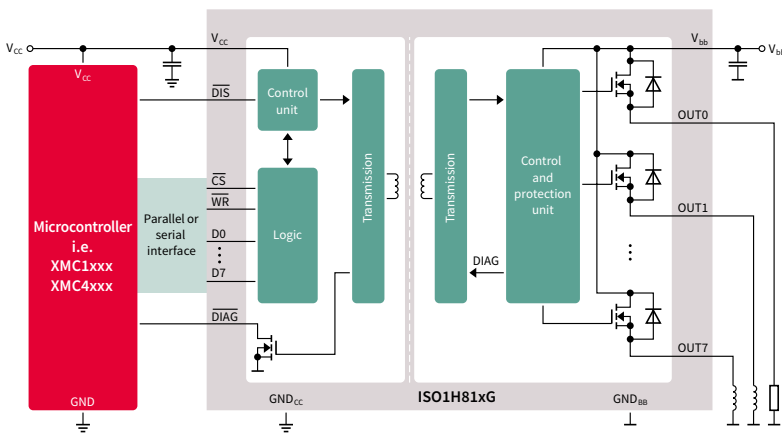

The ISOFACE™ product family provides robust and intelligent galvanic isolation for industrial control applications such as programmable logic controllers, sensor input modules, control panels and general control equipment. The output switches are compact in design, enabling robust and reliable operation at low system cost. Ideal for high-speed applications, digital input ICs are equally robust, reliable and compact – also offering superior EMI robustness and setting a new standard in diagnostics.

ISOFACE™ galvanic-isolated 8-channel output switches

The ISO1H81xG product family integrates:

- › Robust galvanic isolation (UL508 and C22.2 NO14 certified) to protect the 3.3 V/5 V control domain of an industrial control system from the harsh 24 V process side
- › 8-channel high-side power-switching capabilities of up to 1.2 A per channel
- › Active current limitation and over-temperature protection
- › Common diagnostic feedback for overtemperature and for V_{bb} undervoltage

Isolated output switch block diagram

Isolated output switches

Features and benefits

Key features
› Integrated galvanic isolation (500 V _{AC})
› Eight channels (0.6 or 1.2 A, each)
› Inductive load switching
› Diagnostic feedback (overtemperature, overload)
› Serial and parallel MCU interface

Key benefits
› Robust and reliable
› Compact system solution
› Lower system cost
› System status feedback
› Directly interfacing with all MPUs and MCUs

ISOFACE™ galvanic-isolated 8-channel high-side switch with 10-fold diagnostics

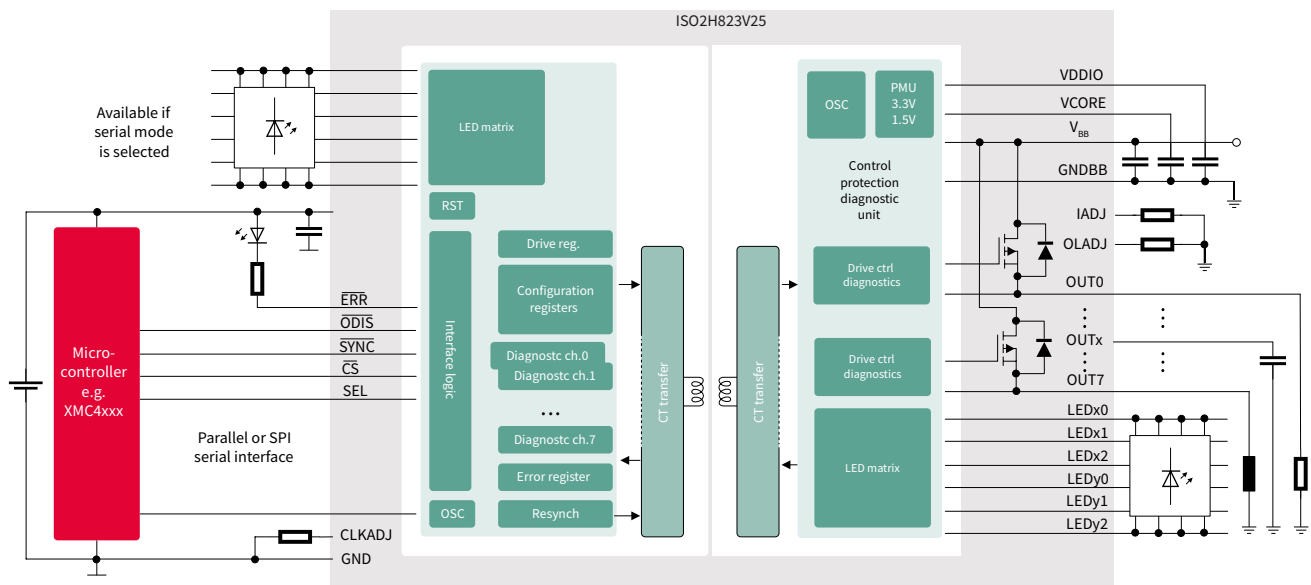

The ISO2H823V establishes a new standard in diagnostics for industrial control applications. For example, in industrial plants with capital-intensive single-tool equipment at work or with time-critical chemical processes running, obtaining in real-time differentiated feedback from the factory floor enables both, preventive maintenance and drastic reduction of the time to fix a problem. This is why the ISO2H823V is a highly desirable system solution. System designers benefit from the ISO2H823V through short time to market, reduced PCB area and uncompromised product reliability.

The ISO2H823V integrates:

- › Robust 2.5 kV AC galvanic isolation:
 - UL508 and CSA C22.2 No.14 certified
 - Protecting the 3.3 V control domain of an industrial control system from the harsh 24 V process side
 - Exceeding the IEC 61131-2 requirements for reinforced isolation
- › 8-channel high-side power-switching capabilities of up to 0.6 A per channel with active current limitation and overtemperature protection
- › 10-fold diagnostic feedback
 - 5 types of feedback which are available individually for each of the eight outputs
 - 5 types of IC-level feedback
- › Common diagnostic feedback for overtemperature and for V_{bb} undervoltage

Typical application

Features and benefits

Key features

- › Robust 2.5 kV AC galvanic isolation
- › Eight channels (up to 0.6 A per channel)
- › 10-fold diagnostic feedback (over-temperature, overload)

Key benefits

- › Reliable and UL certified
- › Small form factor solution
- › Preventive Maintenance and short down-times

ISOFACE™ galvanic-isolated digital input ICs

The UL1577 certified ISO1181xT digital input IC family is an intelligent system solution offering robust galvanic isolation between the microcontroller on the “control side” and the 24 V factory floor environment, frequently referred to as the “process side”.

Digital input switch block diagram

Galvanic-isolated digital input ICs

Features and benefits

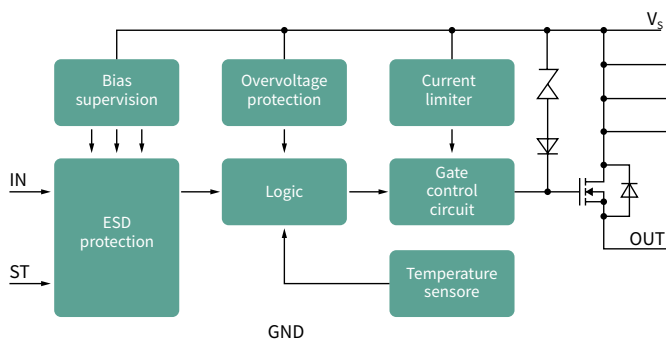

Key features	Key benefits
› Integrated galvanic isolation (500 VAC)	› Robust and reliable
› Eight channels (IEC type 1/2/3)	› Compact system solution
› Up to 500 kHz sampling speed	› High-speed applications
› Programmable input filters	› Superior EMI robustness
› Channel-specific diagnostics (wire-break, undervoltage)	› System status feedback
	› Valuable maintenance support

Industrial PROFET™

Protected high-side switches

Infiniteon's market-proven high-side switch Industrial PROFET™ products have been designed to target various industrial applications that drive all types of resistive, inductive and capacitive loads. Due to their outstanding energy robustness, they are perfectly suitable for switching challenging inductive loads and driving relays. Their main application areas include high-voltage and (V_{supply} up to 60 V) and PWM applications up to 1 kHz. Industrial PROFET™ can be applied to drive any kind of sensor units, indicators, displays, LEDs, relays, valves and magnetic actuators or replace electromechanical relays, fuses and discrete circuitry. Industrial PROFET™ products are also perfect for applications with long wiring or any other kind of inductive loads or applications with space constraints. Failsafe systems do make use of them as well.

PROFET™ typical block diagram

Key applications

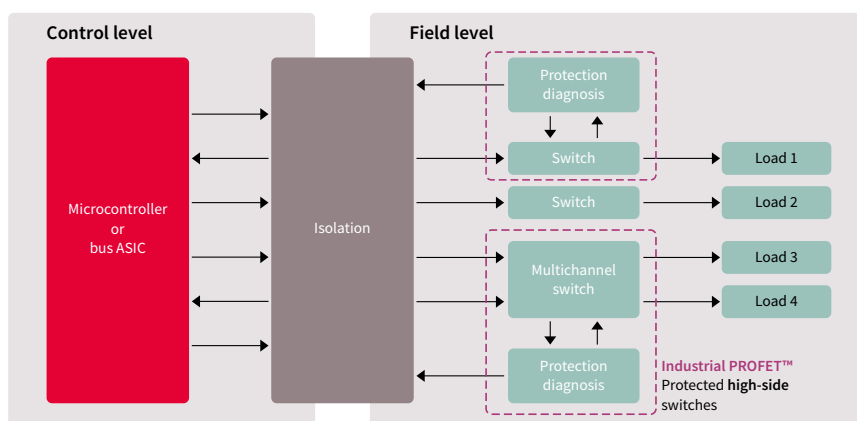

- > Industrial automation
- > Programmable logic controller (PLC)
- > Digital DCS and PC I/O modules
- > Robotics
- > Building and home automation
- > Solar applications
- > Wind energy systems
- > Failsafe systems
- > Smart grid
- > Motor control and drives
- > Power supplies

Features and benefits

Key features
> Right fit for digital output switches, motor or robot control, protected switching of decentralized loads like sensors or auxiliary supply
> Outstanding robustness and reliability as required by industrial mission profiles
> Thermally optimized products with low $R_{DS(on)}$ to deal with the high ambient temperatures and limited or even no cooling
> Diagnosis and protection for safe system operation
> Small and compact design for higher integration and applications with space constraints

Key benefits
> Small system form factor
> No/little downtime of system in operation
> Low heating up of a system
> System cost saving by built-in protection and tailored featureset
> Reduced system maintenance efforts by providing optimized diagnostics

PLC – programmable logic controller digital output modules

PROFET™ as actuators typically address I/O modules supplying nominal currents of 2 A or 0.5 A. However, PROFET™ portfolio also provides devices for lower and higher currents. PROFET™ parts are suitable for switching resistive, capacitive and, by featuring high EAS, inductive loads.

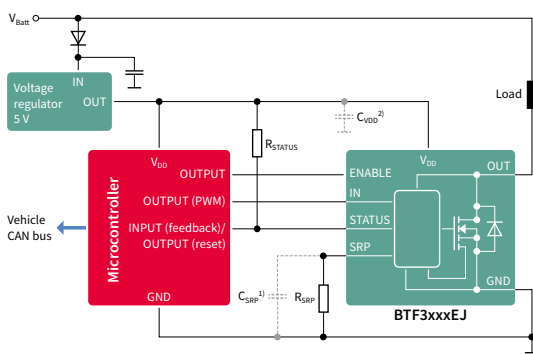

Corresponding PROFET™ evaluation boards are available on request.

HITFET™

Protected low-side switches

HITFET™ stands for highly-integrated temperature-protected MOSFET. These well-established low-side switches offer a compelling feature set with protection against overtemperature, short circuit and overload conditions as well as ESD robustness. The HITFET™ + family is the new generation based on new technology, enabling a significant shrink compared to the existing Classic HITFET™ portfolio (up to 50 percent shrink). This novel generation consists of standard and fully-featured protected low-side switches (11 to 125 mΩ) in the TO-252-3 DPAK/TO-252-5 DPAK and TDSO-8 packages. Classic HITFET™ and HITFET™ + devices address a wide range of applications, including resistive, inductive and capacitive loads.

Application diagram example for HITFET™ +

1) $C_{SRP-GND} < 100 \text{ pF}$ - maximum permitted parasitic capacitance at the SRP-pin
 2) Filter capacitor on supply, recommended 100 nF

Key applications

- > Industrial automation *
- > Programmable logic controller (PLC) **
- > Digital I/O modules
- > Building and home management
- > All kind of solenoid or valve driving
- > Power modules
- > Solar power inverters

Features and benefits

Key features
> Low-side switches with integrated protection features
> Scalable in $R_{DS(on)}$ ranges from 800 mΩ down to 11 mΩ
> Adjustable slew rate control (BTFxxx)
> Thermal shutdown with auto restart or latch behavior
Status feedback via
> Increased input current (HITFET™ 2 nd gen.)
> Digital readout via SRP (BTF3050TE)
> Via status pin (BTF3xxxEJ)

Key benefits
> High design flexibility with scalable $R_{DS(on)}$ and package
> Driving applications with high switching speed requirements up to 25 kHz (e.g. valve, solenoid)
> Easy to design-in
> Choice of packages to match individual application needs

Low-side switch shield with BTF3050TE for Arduino

Featured products: Three **BTF3050TE** low-side switches of the HITFET™ + family
Compatible with: Microcontroller boards using the Arduino form factor and the corresponding Infineon's kits with Arm® powered XMC™ microcontroller
Orderable part number: SHIELDBTF3050TETOBO1

BTT3018EJ DEMOBOARD

Featured products: One single-channel low-side switch of **BTT3018EJ**
Compatible with: Can be used as single stand and is also pin-compatible with microcontroller boards using the Arduino form factor (e.g. XMC1100 Boot Kit, Arduino Uno)
Orderable part number: BTT3018EJDEMOBOARDTOBO1

* See block diagram on page 278
 ** See block diagram on page 279

Gate-driver ICs

EiceDRIVER™ gate-driver ICs for MOSFETs, IGBTs, SiC MOSFETs and GaN HEMTs

Every switch needs a driver – the right driver makes a difference. Power electronics applications employ power device switches. And power device switches require optimum gate driver solutions. That is why we offer more than 500 EiceDRIVER™ gate-driver IC solutions suitable for any power switch, and for any application.

EiceDRIVER™ gate-driver ICs provide a wide range of typical output current options, from 0.1 A up to 14 A. Robust gate drive protection features such as fast short-circuit protection (DESAT), active Miller clamp, shoot-through protection, fault, shutdown, and overcurrent protection make them well-suited for both silicon and wide bandgap power devices, including CoolGaN™ and CoolSiC™.

Right configuration for any power discrete and module

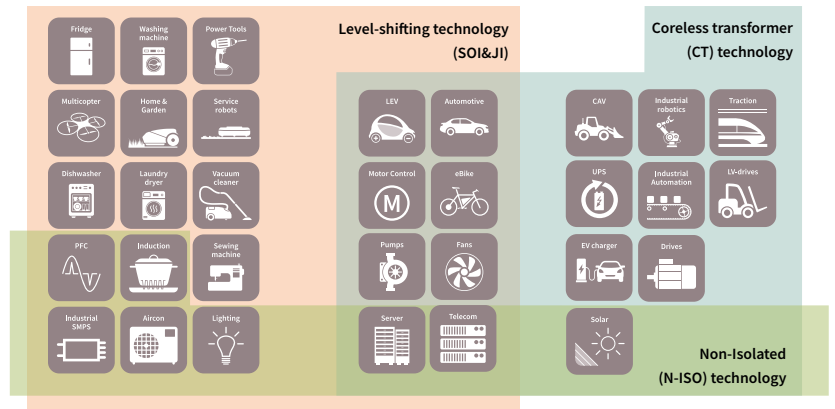

Our portfolio spans a variety of configurations, voltage classes, isolation levels, protection features, and package options. We offer excellent product families of galvanic isolated gate drivers, automotive qualified gate drivers, 200 V, 500-700 V, 1200 V level shift gate drivers, and non-isolated low-side drivers.

	Non isolated			Level-shift		Galvanically Isolated

Advanced features for different applications

Our EiceDRIVER™ gate drivers provide advanced features including but not limited to integrated bootstrap diode (BSD), overcurrent protection, shutdown, fault reporting, enable, input filter, OPAMP, DESAT, programmable deadtime, shoot through protection, active miller clamp, active shutdown, separate sink and source outputs, short circuit clamping, soft shutdown, two level turn off and galvanic isolation (functional, basic and reinforced).

Single-channel low-side driver

Allows low offset of the voltage between input and output

Single-channel high-side driver

Allows high voltage offset between input and output

Dual-channel low-side driver

Both channels allow individual low voltage offsets, no interlock

Dual-channel high-side driver

Both channels allow individual high voltage offsets, no interlock

High and low-side driver

Two non-interlocked channels, one for high, one for low voltage offsets

Half-bridge driver

Two interlocked channels where one of the channel allows a high voltage offset

Full-bridge driver

Four channels in a package with two independent half bridges

Three-phase bridge

Six channels in a package with three independent half bridges

Current sense

Current sensing across a high-voltage offset between sense input and data output

Synchronous-buck driver

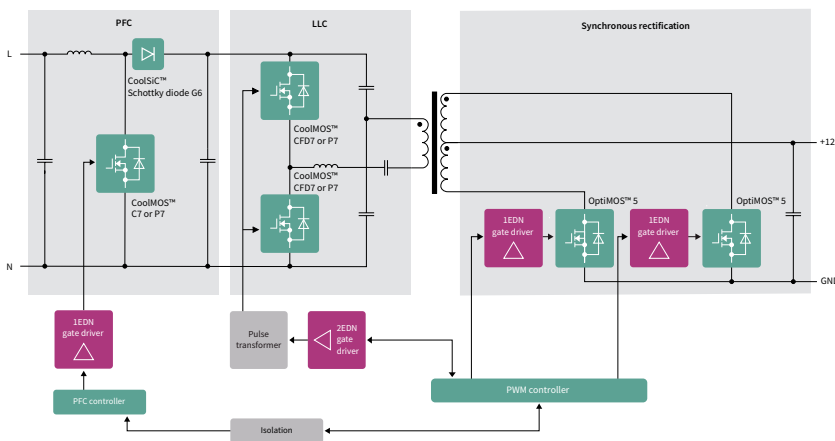

High speed drivers for dual high-side and low-side MOSFETs in synchronous rectified buck converters

EiceDRIVER™ 1EDN

Rugged, cool and fast, single-channel low-side 4 A/8 A gate-driver ICs

Single-channel MOSFET gate-driver ICs are the crucial link between control ICs and powerful MOSFET switching devices. EiceDRIVER™ 1EDN family is fast, precise, strong and compatible. In SMPS designs, for fast MOSFET switching, high efficiency is enabled by 5 ns short slew rates and ± 5 ns propagation delay precision. Separate source and sink outputs simplify the application design, while industry standard packages and pinout ease system design upgrades. EiceDRIVER™ 1EDN family brings about the new reference in ruggedness and low power dissipation. A -10 V robustness of control and enable inputs provide crucial safety margin when driving pulse transformers. 5 A reverse output current robustness eliminates the need for Schottky switching diodes when driving MOSFETs in TO-220 and TO-247 packages. True rail-to-rail low impedance output stages ensure the cool operation of driver ICs, while 4 V and 8 V UVLO (undervoltage lockout) options for instant MOSFET offer protection during start-up and under abnormal conditions.

Application overview: 800 W switched mode power supply

EiceDRIVER™ 1EDN7550 and 1EDN8550

Single-channel low-side gater-driver family with truly differential inputs prevents false triggering of power MOSFETs

Single-channel MOSFET gater-driver ICs are the crucial link between control ICs and powerful MOSFETs. The input signal levels of conventional low-side gater-driver ICs are referenced to the ground potential of the gater-driver IC. If in the application the ground potential of the gater-driver IC shifts excessively, false triggering of the gater-driver IC can occur. Gater-driver ground-shits have two main causes: the parasitic ground inductance between where the gater-driver IC is placed and where the control IC resides, and parasitic source inductances between the gater-driver IC and the MOSFET driven by it. Overcome ground-shift challenges in your design with Infineon's single-channel, low-side, EiceDRIVER™ gater-driver ICs with truly differential inputs. The 1EDN7550/1EDN8550 gater-driver ICs feature control signal inputs which are largely independent from the ground potential. Only the voltage difference between its input contacts is relevant, which prevents false triggering of power MOSFETs.

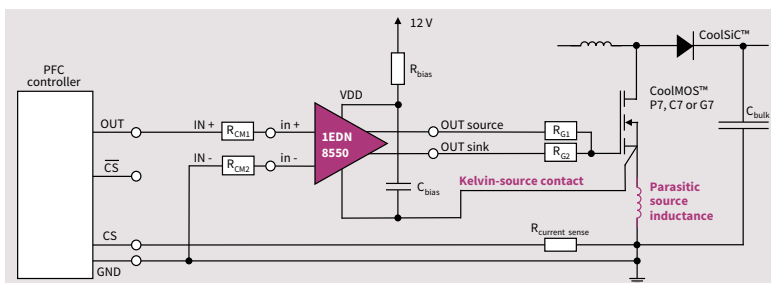

1EDN7550 driving CoolMOS™ SJ MOSFET on single-layer PCB

Pinout

1EDN8550 driving Kelvin-source CoolMOS™ SJ MOSFET in boost

Features and benefits

Product features
> Truly differential inputs
> 4 A source current
> 8 A sink current
> Separate source/sink outputs
> Low-ohmic output stage
> 29 ns input minimum pulse width
> 7 ns propagation delay accuracy
> 5 A reverse current robustness of the outputs
> 4 V and 8 V UVLO versions
> SOT-23 package, 6 pins

Product benefits
> Control inputs independent from gate-driver GND
> Fast Miller plateau transition
> Fast shut-off
> No diode voltage drop → near zero gate voltage at turn-off
> Low power dissipation within gate-driver IC
> Up to 15 MHz switching speed
> Precise
> No Schottky clamping diodes required
> Fast and reliable MOSFET turn-off
> Small

Application benefits
> Robust against ground shifts from power MOSFET switching
> Low MOSFET switching losses
> Robust against false MOSFET triggering
> Highest effective MOSFET driving power
> Efficiency gains
> Increased power density and BOM savings
> Instant MOSFET protection under abnormal operation
> High power density

EiceDRIVER™ 1EDB

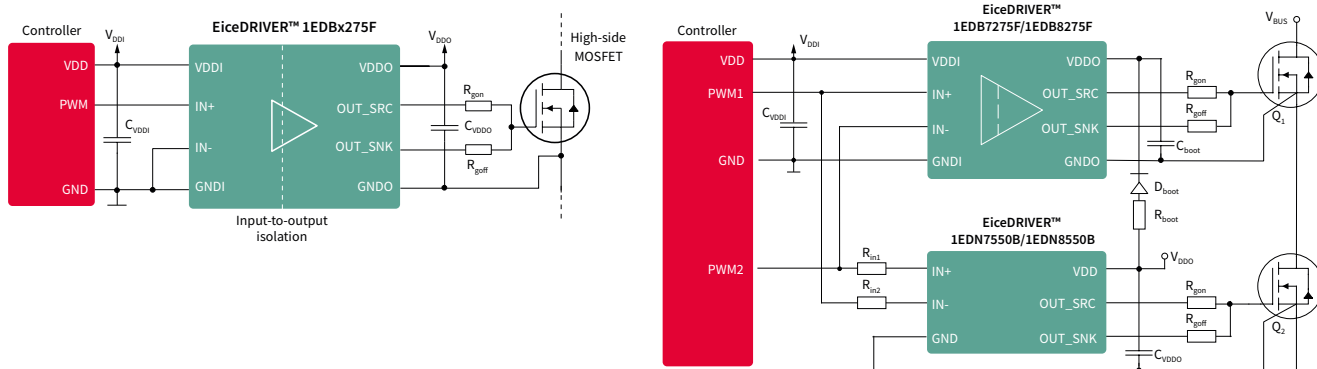

Fast, robust, single-channel, basic isolated MOSFET gate drivers with accurate and stable timing

The EiceDRIVER™ 1EDB family of 1-channel gate-driver IC provides input-to-output isolation of 3 kV_{rms} (UL1577 pending). 1-channel isolated gate-driver ICs solve PCB-layout problems in high-power factor controllers (PFC) and high-voltage DC-DC stages. Applications also include multilevel topologies and use cases with 557 V_{rms} working voltage (pollution class II).

With ± 4 ns propagation delay accuracy, the gate-driver family is optimized for fast-switching applications with high system-level efficiencies. To support functionally save system operation, the common-mode transient immunity (CMTI) exceeds 300V/ns, typical output stage clamping speed is as short as 20 ns, and designers can choose between three different outputs-stage under-voltage lock-out (UVLO) variants (3.9 V, 7.0 V, 12.9 V).

The 1EDB gate-driver family is available in 8-pin DSO packages. For ease-of-design, the industry-standard pinout has separate source and sink output pins.

System application diagram

EiceDRIVER™ 2EDN

Rugged, cool and fast, dual-channel low-side 4 A/5 A driver IC

Dual-channel driver ICs are the crucial link between digital control ICs and powerful MOSFET and GaN switching devices. EiceDRIVER™ 2EDN family is fast, precise, strong and compatible. In SMPS designs, high efficiency is enabled by 5 ns short slew rates and 10 ns propagation delay precision for fast MOSFET and GaN switching. The family offers numerous deployment options thanks to two 4 A/5 A channels. The channel-to-channel accuracy of 1 ns allows using two channels in parallel, while industry standard packages and pinout ease system design upgrades. EiceDRIVER™ 2EDN family offers the new reference in ruggedness and low power dissipation. A 5 A reverse output current robustness eliminates the need for Schottky switching diodes and reduces bill-of-material.

Application overview 800 W, 130 kHz switched mode power supply

Industry standard pinout configuration

Features and benefits

Product features
> 5 A source/sink current
> 5 ns rise/fall times
> <10 ns propagation delay precision
> True rail-to-rail low impedance output stages
> 4 V and 8 V UVLO options
> 19 ns propagation delay for both control and enable inputs
> -10 V robustness of control and enable inputs
> 5 A reverse output current robustness
> 2 independent channels
> Excellent 1 ns channel-to-channel accuracy
> Industry standard pinout and packages

Product benefits
> Fast Miller plateau transition
> Precise timing
> Low power dissipation in driver IC
> Fast and reliable MOSFET turn-off, independent of control IC
> Increased GND-bounce robustness
> Saves switching diodes
> Option to increase drive current by truly concurrent switching of 2 channels
> Straight forward design upgrades

Application benefits
> High power efficiency - in hard-switching PFC with SiC diode - in half-bridges and synchronous rectifications
> Cooler driver IC operation
> Higher MOSFET drive capability
> Instant MOSFET protection under abnormal operation
> Crucial safety margin to drive pulse transformer
> Increases power density
> BOM savings
> One IC covering many applications
> Short time to market

EiceDRIVER™ 2EDi

Fast, robust, dual-channel, functional and reinforced isolated MOSFET gate drivers with accurate and stable timing

The EiceDRIVER™ 2EDi product family is designed for use in high-performance power conversion applications. Very strong 4 A/8 A source/sink dual-channel gate drivers increase efficiency in CoolMOS™ and OptiMOS™ MOSFET half-bridges. The low propagation delay of 37 ns, combined with highly accurate and stable timing over temperature and production, enables further efficiency gains within and across galvanically isolated power stages or in multiphase/multilevel topologies. The availability of functional and reinforced isolated drivers in different packages makes them the perfect fit for both primary-side and (safe) secondary-side control. Gate driver outputs come with a high 5 A reverse current capability and 150 V/ns CMTI robustness for high dv/dt power loops. For slower switching or driving smaller MOSFETs, 1 A/2 A peak current product variants are available as well.

EiceDRIVER™ 2EDL8 product family

Dual-channel junction-isolated gate-driver ICs

The EiceDRIVER™ 2EDL8 family of dual-channel junction-isolated gate-driver ICs is designed for medium voltage power MOSFETs in half-bridge applications such as telecom and datacom DC-DC converters. The 2EDL8 family comprises four variants:

- > Designers can choose between two different pull-up currents: the 3 A version can be the right choice for retrofit designs. The industry-leading 4 A version is recommended to reduce MOSFET switching losses.
- > The 2EDL8 family is available with two different input configurations: the 2EDL802x permits operation of both channels independently. For this reason, it is the perfect choice for diagonally driven full-bridges on the primary side as well as for the synchronous rectification stage on the secondary side because it permits reduction of the losses during the free-wheeling phase. The differential input structure of the 2EDL812x effectively renders it to be a half-bridge gate driver with built-in shoot-through protection, making it a good choice for the primary-side half-bridge stages with non-diagonal driving scheme.

Common to all four variants is their industry-standard leadless package and pin-out. Also, all of them have an integrated 120 V boot-strap diode as well as a precise channel-to-channel propagation delay matching of ± 2 ns.

System application diagram

Features and benefits

Key features	Product benefits	System benefits
> 120 V boot-strap diode integrated	> No need for external boot strap diode	> High power density
> Low resistance rail-to-rail outputs: - Low-side: 4 A pull-up, 6 A pull-down - High-side: 4 A pull-up, 5 A pull-down	> Fast MOSFET switching > Strong pull-down current reduces risk of return-on from switching noise	> High efficiency > Strong MOSFET Reliability
> 4 ns delay matching	> Low dead-time losses	> High efficiency
> Differential inputs, optional	> Inherent shoot-through protection > -8 V/+15 V common mode rejection	> Strong MOSFET reliability > Robust operation

EiceDRIVER™ GaN

Single-channel isolated gate-driver ICs for high-voltage GaN switches

CoolGa™ e-mode HEMTs are best driven by Infineon's EiceDRIVER™ GaN ICs, the 1EDF5673K, 1EDF5673F and 1EDS5663H. They ensure robust and highly efficient high-voltage GaN switch operation whilst concurrently minimizing R&D efforts and shortening time-to-market.

High-power SMPS application example

*EiceDRIVER™ GaN ICs are single-channel products

Key use cases

- > Totem-pole PFCs
- > Vienna rectifiers
- > Multilevel topologies
- > Resonant LLC

Features and benefits

650 V level shift SOI and JI gate driver for IGBTs and MOSFETs

EiceDRIVER™ 2ED210xS06 and 2ED218xS06 - 650 V half-bridge, high and low-side gate drivers with integrated bootstrap diode

The 2ED2106/08/09/091S06 and the 2ED2181/83/84S06 high-current gate-driver families are the matching choice for high-voltage power MOSFETs and IGBTs with half-bridge and high and low-side configuration. Based on SOI-technology, this device has excellent robustness and noise immunity with the capability to maintain operational logic at negative voltages of up to $-11 V_{DC}$ on the V_S pin ($V_{CC}=15 V$) on transient voltages. With no parasitic structures, the device is immune to parasitic latch-up at all temperature and voltage conditions.

Simplified application diagrams

Features and benefits

Key benefits
> Infineon 650 V thin-film SOI-technology
> Integrated ultrafast, low resistance bootstrap diode
> Negative V_S transient immunity of 100 V
> Logic operational up to $-11 V$ on V_S pin
> Separate logic and power ground (DSO-14)

Key benefits
> Low level shift losses, suitable for high-frequency application
> Quick time to market, reduced BOM cost
> High reliability and robustness
> SOI technology eliminates the parasitic bipolar transistors that are causing latch-up
> Integrated input filters enhance noise immunity

650 V level shift SOI and JI gate drivers for IGBTs and MOSFETs

EiceDRIVER™ [2ED28073J06F](#) - 600 V half-bridge junction-isolated gate driver with integrated bootstrap FET

The [2ED28073J06F](#) is a high voltage, high-speed power MOSFET and IGBT driver with dependent high- and low-side referenced output channels. It is optimized to drive CoolMOS™ PFD7 in motor drive applications. Proprietary HVIC and latch immune CMOS technologies enable ruggedized monolithic construction. The output drivers feature a high-pulse current buffer stage designed for minimum driver cross-conduction. The floating channel can drive N-channel power MOSFETs or IGBTs in the high-side configuration that operates up to 600 V.

Evaluation board

[EVAL_DRIVE_3PH_PFD7](#)

Key components:

- > CoolMOS™ PFD7 gate driver suitable for low-power drives ([2ED28073J06F](#))
- > 600 V CoolMOS™ PFD7 MOSFET ([IPN60R1K5PFD7S](#))

Order code: EVALDRIVE3PH_PFD7TOB01

The [EVAL_DRIVE_3PH_PFD7](#) is a three-phase motor drive evaluation board with sensorless field-oriented control (FOC). It demonstrates Infineon's latest SJ technology tuned specially for motor drives by introducing a complete system-level solution using discrete inverters to control and drive three-phase motors. The [EVAL_DRIVE_3PH_PFD7](#) evaluation board has been developed to support customers in their first steps of designing a three-phase inverter stage for the target applications

1200 V level shift SOI gate driver

6ED2230S12T - 1200 V three-phase gate driver with overcurrent protection and integrated bootstrap diode (BSD)

The **6ED2230S12T** is a 1200 V three-phase SOI gate driver with an integrated bootstrap diode and overcurrent protection, with typical 0.35 A source and 0.65 A sink currents in a DSO-24 package (DSO-28 with 4 pins removed) for driving IGBTs. Proprietary HVIC and latch-immune CMOS technologies enable a robust monolithic design. A current-trip function that terminates all six outputs can also be derived from this resistor. An open-drain FAULT signal is provided to indicate that an overcurrent or undervoltage shutdown has occurred. Fault conditions are cleared automatically after a delay programmed externally via an RC network. The output drivers feature a high pulse current buffer stage designed for minimum driver cross conduction. Propagation delays are matched to simplify the HVIC's use in high-frequency applications.

Typical application diagram

Features and benefits

Key benefits
> Infineon thin-film SOI technology
> Output source/sink current capability +0.35 A/-0.65 A
> Integrated ultrafast, low $R_{DS(on)}$, bootstrap diode
> Overcurrent protection (ITRIP $\pm 5\%$ reference)
> Fault reporting, automatic fault clear and enable function on the same pin (RFE)

Key benefits
> Tolerant to negative transient voltage up to -100 V (pulse width is up 700 ns) given by SOI technology, high reliability and robustness
> Drive 1200 V IGBT and SiC MOSFET
> Quick time to market, reduced BOM cost
> Advanced protection

Negative V_s transient robustness of Infineon SOI

Evaluation board available: **EVAL-M1-6ED2230-B1**

200 V level shift SOI and JI gate drivers for MOSFET

Half-bridge, high- and low-side, three-phase gate-driver family for low-voltage motor drives

Infineon offers 200 V ICs tailored for low-voltage (24 V, 36 V, and 48 V) and mid-voltage (60 V, 80 V, and 100 V) motor drive applications. These MOSFET drivers provide full driver capability with breakneck switching speeds, designed-in ruggedness and low power dissipation. The 200 V driver ICs are offered in standard packages and pinout configurations with various logic input options for high design flexibility and fast time to market. Low-side supply voltage (V_{CC}) and floating channel supply (V_{BS}) undervoltage lockout (UVLO) ensure reliable start-up operation. The three-phase product family utilizes Infineon's unique silicon-on-insulator (SOI) level shift technology to provide functional isolation with industry-leading negative V_S robustness and reduced level shift losses. The family provides integrated bootstrap diodes (BSD) to reduce BOM cost, simplify the layout, and reduce the PCB size.

Simplified application diagram

IRS2008S

6EDL04N02PR

Features and benefits

Key features
> V_{CC} UVLO protection with V_{BS} UVLO for IRS2005/7/8
> Deadtime and cross-conduction prevention logic
> Three-phase solution with silicon-on-insulator (SOI) technology with integrated bootstrap diodes (BSD)
> Deadtime and cross-conduction prevention logic
> Fully operational to +200 V off set voltage
> Tolerate to negative transient voltage, dV/dt immune
> Low quiescent current
> Various input options, standard pin-out and packages

Key benefits
> Fast and reliable switching
> Protection under abnormal operation
> Ensure reliable start-up operation
> Reduced BOM cost, smaller PCB at lower cost with simpler design
> Increased negative V_S robustness for increased reliability
> Increased device reliability, operational headroom
> Low-cost bootstrap power supply
> Easy-to-use, straight-forward design
> Fast time to market

Non-isolated low-side gate-driver ICs

1ED44173/5/6 - 25 V low-side gate driver with integrated overcurrent protection, fault reporting, and enable function

The [1ED44173N01B](#), [1ED44175N01B](#), and [1ED44176N01F](#) are low-voltage, non-inverting, low-side gate drivers designed for ground-referenced applications such as digitally controlled power-factor correction (PFC) circuits requiring overcurrent protection (OCP). OCP is typically implemented by using a current measurement circuit with a comparator such as LM293 and a network of resistors and capacitors. [1ED44173N01B](#), [1ED44175N01B](#), and [1ED44176N01F](#) also integrate up to 20% cost and 50% space savings by integrating the OCP comparator, which features a fast and accurate current-sensing threshold tolerance of $\pm 5\%$. [1ED44173N01B](#), [1ED44175N01B](#), and [1ED44176N01F](#) also integrate fault-output reporting to the controller and driver enable functionality in one pin. [1ED44176N01F](#) has separate logic and power ground pins for operational robustness.

Simplified application diagram

Features and benefits

Product features	Product benefits	Application benefits
<ul style="list-style-type: none"> Integrated overcurrent protection comparator with accurate OCP threshold Single pin for fault output and enable function Programmable fault clear time Under-voltage lockout (UVLO) protection Wide supply voltage range Separate logic ground and gate driver return (1ED44176N01F) 	<ul style="list-style-type: none"> 0.5 V overcurrent threshold with accurate ± 5 percent tolerance Internal Schmitt trigger comparator for the enable function External capacitor (C_{FLT}) sets the length of the fault clear time Specific UVLO level for IGBTs and MOSFETs (1ED44176/5 typ. on/off = 11.9 V / 11.4 V) (1ED44173 typ. on/off = 8.0 V / 7.3 V) 25 V V_{CC} Max V_{SS} and COM pins (1ED44176N01F) 	<ul style="list-style-type: none"> Potential space savings up to 50 percent and cost savings up to 20 percent compared to the discrete solution Flexible fault clear time setup for different micro-controller processing speeds Eliminates switching loss at low V_{CC} supply voltage More robust against V_{CC} spikes in harsh circuit applications Avoids noise coupling from output to input which improves noise immunity

2ED24427N01F – 24 V, 10 A dual low-side gate driver with enable-function in DSO-8 package with thermal pad

The **2ED24427N01F** is a low-voltage, power MOSFET and IGBT non-inverting gate driver. Proprietary latch immune CMOS technologies enable rugged monolithic construction. The logic input is compatible with standard CMOS or LSTTL output. The output drivers feature a high pulse current buffer stage designed for minimum driver cross-conduction. Propagation delays between two channels are matched. Internal circuitry on the V_{CC} pin provides an undervoltage lockout protection that holds output low until V_{CC} supply voltage is within operating range.

Simplified application diagram

Features and benefits

Key features
> 10 A sink and 10 A source driver capability
> 11.5 V undervoltage lockout
> 24 V maximum supply voltage
> Enable function
> DSO-8 package with thermal pad

Key benefits
> Suitable for IGBT/MOSFET paralleling, transformer driver, easily drive low $R_{DS(on)}$ MOSFETs at high switching frequencies
> Can be used as external booster
> Robustness in noisy environment
> Dedicated pin to terminates all outputs
> Smaller thermal resistor, bigger Power dissipation

In half-bridge LLC or full-bridge ZVS power topologies, the **2ED24427N01F** can easily drive low $R_{DS(on)}$ high-voltage MOSFETs in a half-bridge at high-switching frequencies. In synchronous rectification, more than two MOSFETs can be paralleled and driven from a single channel of the driver. One **2ED24427** device can efficiently drive both synchronous rectification legs. When higher current is needed, the **2ED24427N01F** can boost the current from a regular gate driver and drive high current IGBTs or MOSFETs or EasyPACK™ or EconoPACK™ power modules.

EiceDRIVER™ 1ED Compact (1ED-AF/MF)

1200 V, 10 A single-channel, isolated driver family with Miller clamp or separate output

Infiniteon's EiceDRIVER™ 1ED Compact family 1ED-AF and 1ED-MF provides Miller clamp or separate output options, together with active shutdown and short circuit clamping in DSO-8 150 mil package. The active Miller clamp function is highly recommended for SiC MOSFET 0 V turn off and IGBT7. 1ED Compact offers CMTI up to 100 kV/μs, and up to 10 A typical output current. Suitable for applications including but not limited to solar inverter, EV charging, industrial drives, CAC, induction cooking, CAV, UPS, and server and telecom SMPS. The 1ED Compact is the most cost-effective family in the EiceDRIVER™ isolated driver family and ideal for IGBTs, MOSFETs, and SiC MOSFETs.

Simplified application diagram

Separate sink/source outputs

Active Miller clamp

Features and benefits

Key features
> DSO-8 150 mil wide body package with 4 mm creepage distance
> Integrated input filter
> Up to 10 A typical peak rail-to-rail output
> 100 kV/μs CMTI
> Active Miller clamp or separate output
> 15 ns propagation delay matching
> Short circuit clamping and active shutdown

Key benefits
> Small, space-saving package
> No external filter needed, cost saving and robustness
> Avoids wrong switching patterns in rugged environments
> Optimized pinout for low inductance power supply
> Higher dynamic range in PWM modulation and shorter dead time
> Higher robustness in rugged environments
> Suitable for operation at high ambient temperature

EiceDRIVER™ X3 Compact (1ED31xx)

5.7 kV, 14 A single-channel, isolated driver family with Miller clamp or separate output

Infiniteon's EiceDRIVER™ X3 Compact family 1ED31xx provides Miller clamp or separate output options, together with active shutdown and short circuit clamping in DSO-8 150 mil and 300 mil package. The active Miller clamp function is highly recommended for SiC MOSFET 0 V turn off and IGBT7. X3 Compact offers a benchmark CMTI of 200 kV/μs, and a typical 5/10/14 A output current. The tight propagation delay matching (7 ns max.) results in shorter deadtime. Suitable for applications like solar inverter, EV charging, industrial drives, CAC, induction cooking, CAV, UPS, server and telecom SMPS, etc. EiceDRIVER™ X3 Compact family is recognized under UL 1577 with $V_{ISO} = 5.7 \text{ kV}_{rms}$ for 1 min and VDE 0884-11 with $V_{IORM} = 1767 \text{ V}$ (reinforced). The 1ED31xx is rated up to 2300 V functional isolation and ideal for IGBTs, MOSFETs, and SiC MOSFETs.

Simplified application diagram

EiceDRIVER™ 2L-SRC Compact (1ED32xx)

5.7 kV, 18 A single-channel isolated gate driver with two-level slew-rate control

EiceDRIVER™ 2L-SRC Compact family 1ED32xx is a single-channel isolated gate driver with two-level slew-rate control (2L-SRC) and 18 A typical sinking and sourcing peak output current in DSO-8 wide-body package with large creepage distance (>8 mm) for IGBTs, MOSFETs, SiC MOSFETs. The slew-rate control feature allows customers to change the output current on the fly and reduce EMI significantly in drives application.

1ED3241 offers two separate outputs with 18 A typical peak output current to control two independent gate resistances, thus enabling two-level slew-rate control. The driver can operate over a wide supply voltage range, either unipolar or bipolar. 1ED3251 also offers Miller clamp function, especially for SiC MOSFET, IGBT7, and other high power applications against parasitic turn on.

Simplified application diagram

Separate sink/source outputs

Active Miller clamp

Features and benefits

Key features
> Two-level slew-rate control feature (2L-SRC)
> 18 A typical sinking and sourcing peak output current
> 100 ns propagation delay with 30 ns input filter
> High common-mode transient immunity CMTI >200 kV/μs
> Active Miller Clamp
> Short circuit clamping and active shutdown
> UL 1577 (V _{ISO} = 5.7 kV _{rms}), VDE 0884-11 (V _{ORM} = 1767 V (peak, reinforced))

Key benefits
> DSO-8 300 mil wide-body package with large creepage distance (>8 mm)
> Integrated filters reduce the need of external filters
> 40 V absolute maximum output supply voltage
> Tight propagation delay matching between outputs enables superior slew-rate control functionality over discrete solutions
> High isolation capability, can be used in 1700 V drives inverter applications
> Up to 2300 V functional isolation capable

EiceDRIVER™ Enhanced 1ED/2ED-F2 and 2ED-FI

1200 V, 2 A single and dual-channel, isolated driver family with DESAT and Miller clamp

The EiceDRIVER™ Enhanced [1ED020I12-F2/B2](#) (1ED-F2/B2) gate-driver ICs are galvanic isolated single-channel IGBT and SiC MOSFET drivers in a DSO-16 package that provides output current capabilities of typically 2 A. The precision DESAT function for IGBT is also an excellent solution for SiC MOSFET short-circuit protection. [2ED020I12-F2](#) (2ED-F2) is the dual-channel version of [1ED020I12-F2](#) (1ED-F2) in a DSO-36 package. [2ED020I12-FI](#) (2ED-FI) is a half-bridge isolated driver that integrates OPAMP and comparator, which can be utilized as overcurrent protection (OCP).

Simplified application diagram

Features and benefits

Key features
> Best-in-class desaturation detection
> Active Miller clamp
> 100 kV/µs CMTI
> Short circuit clamping and active shutdown
> Combinable Enable/Shutdown and Fault Feedback signals
> Bipolar output supply
> Inverting and non-inverting inputs

Key benefits
> Protect the power switch from damage during short circuit condition
> Small space-saving package with large creepage distance (>8 mm)
> Avoids wrong switching patterns in rugged environments
> No external filter needed, cost saving and robustness
> Higher dynamic range in PWM modulation and shorter deadtime

EiceDRIVER™ Enhanced X3 Analog (1ED34xx) and X3 Digital (1ED38xx)

5.7 kV, 9 A single-channel, isolated driver family with DESAT, soft-off, and I2C configurability

The X3 Analog (1ED34xx) and X3 Digital (1ED38xx) family are galvanic-isolated single-channel gate driver ICs in a small DSO-16 fine pitch package with a large creepage and clearance of 8 mm. The gate driver ICs provide a typical peak output current of 3 A, 6 A, and 9 A. The precision DESAT function for IGBT is also an excellent solution for SiC MOSFET short-circuit protection. Both X3 analog and digital families offer active Miller clamp, separate sink, and source output. The 1ED34xx analog family provides adjustable DESAT filter time and adjustable Soft-off current level functionality. The 1ED38xx digital family provides I2C configurability for multiple parameters, including DESAT, soft-off, UVLO, active Miller clamp, over-temperature shutdown, two-level turn-off through software.

Simplified application diagram

Features and benefits

Key features
› Adjustable DESAT and adjustable soft-off
› High number of configuration capabilities through I2C interface
› 200 kV/µs CMTI
› Active Miller clamp or clamp driver
› Up to 9 A output current, no booster required
› Tight IC-to-IC propagation delay matching (30 ns max.)
› VDE 0884-11 certified reinforced isolation ($V_{ORM} = 1.767$ kV)
› UL 1577 certified ($V_{ISO} = 5.7$ kV _{rms} for 1 min)

Key benefits
› Optimized short circuit control for 3-level inverters, best-in-class DESAT accuracy
› Flexible design, predictive maintenance and rapid prototyping
› Avoids wrong switching patterns in rugged environments
› Small space-saving package with large creepage distance (>8 mm)
› No external filter needed, cost saving and robustness
› Higher dynamic range in PWM modulation and shorter deadtime
› Suitable for operation at high ambient temperature
› Higher robustness in rugged environments

DESAT protection

Evaluation board available:

- EVAL-1ED3491Mx12M
- EVAL-1ED3890Mx12M*
- EVAL-1ED38x0DCT*

*Coming soon

Protection

- › Reliable short-circuit detection via accurate desaturation
- › (DESAT) detection circuits (current source and comparator) protects the power switches from damage during short-circuit condition
- › Two-level turn-off (TLTO) for short-circuit current protection to lower collector-emitter voltage overshoot
- › Active Miller clamping option protects against parasitic turn-on due to high dV/dt
- › Built-in short-circuit clamping limits the gate voltage during short circuit

EiceDRIVER™ 1EDS-SRC

1200 V single-channel, isolated driver family with slew-rate control

The new EiceDRIVER™ slew-rate control (SRC) family serves the latest generation of highly efficient low-EMI electric drive systems with improved efficiency. This is the first high-voltage isolated gate driver on the market with dynamic slew-rate control (SRC), allowing on-the-fly dV/dt control of electric drives through precise gate current control. Hence, it provides the best trade-off between minimum power dissipation and minimum EMI depending on operating conditions.

Simplified application diagram

Part Number	Isolation rating
1EDS20I12SV	Isolation according VDE 0884-10 ($V_{IORM} = 1420 \text{ V}$) and UL 1577 certified with $V_{ISO} = 5 \text{ kV (rms)}$ for 1 min
1EDU20I12SV	UL 1577 certified with $V_{ISO} = 5 \text{ kV (rms)}$ for 1 min
1EDI20I12SV	Functional isolation

Features and benefits

Key features
> Real-time adjustable gate current control
> Desaturation detection
> Overcurrent protection for sense IGBTs and conventional IGBTs
> Soft turn-off shutdown: 1 A pull down to rail
> Two-level turn-off

Key benefits
> Low EMI during low load conditions and high efficiency during high load conditions
> Reduction or elimination of dV/dt filter
> Drive power modules up to 900 A
> Drive 1200 V single-channel IGBT driver
> Unique: NPC1 short circuit protection for three-level inverters

Feature – real-time gate current control

Effect – gate turn-on tunable across a very large dV/dt range:

Evaluation board

EVAL-1EDS20I12SV

Key components:

- > Isolated gate driver with slew rate control (**1EDS20I12SV**)
- > Suitable for EconoDUAL™ 3 module **FF600R12ME4** (module is not delivered with the board)

Order code:

EVAL1EDS20I12SVTOBO2

Industrial and general-purpose gate driver ICs

Infineon's gate-driver IC solutions are the expert's choice

With more than 500 reliable and efficient gate-driver solutions, Infineon has a comprehensive offering for virtually any application. Addressing various application requirements, Infineon delivers solutions with an assortment of gate driver topologies, voltage classes, drive capability, features, and package options to optimize performance, minimize size and reduce costs. Some discrete gate-driver ICs are also available in bare die. The table below shows additional gate-driver IC features available in the current portfolio.

Features	Abbreviation	Benefits
Active Miller clamp	M-CLAMP	Protection against inadvertent dynamic turn-on because of parasitic Miller effects
Active shutdown	SD-ACT	Ensures a safe IGBT off-state in case the output chip is not connected to the power supply or an undervoltage lockout is in effect
Brake chopper	BRAKE	Integrated brake IGBT driver with protection
Comparator	CMP	General-purpose comparator included
Current sense	CS	Senses the motor phase current through an external shunt resistor, converts from analog to digital signal, and transfers the signal to the low side
Dedicated JFET control	JFETDRIVE	Optimized to drive SiC JFET
Desaturation protection	DESAT	Protects the IGBT at short circuit
Enable	EN	Dedicated pin terminates all outputs
Fault reporting	FAULT-RPT	Indicates an overcurrent or undervoltage shutdown has occurred
Fault reset	FAULT-RST	Dedicated pin resets the DESAT-FAULT-state of the chip
High-voltage start-up	HVSTART	Provides easy and fast circuit start-up while enabling low circuit standby losses
Integrated bootstrap diode	BSD	Integrated bootstrap reduces BOM
Operational amplifier	OPAMP	An independent op-amp for current measurement or overcurrent detection
Self-oscillating (oscillator)	OSC	Integrated front end oscillator
Overcurrent protection (ITRIP)	OC	Ensures safe application operation in case of overcurrent
Overtemperature shutdown	SD-OT	Internal overtemperature protection circuit protects the IC against excessive power loss and overheating
Programmable dead time	DT-PROG	Dead time is programmable with external resistor for flexible design
Programmable fault clear time	FLTC	The length of the fault clear time period (tFLTC) is programmed by external capacitor which connected between FLTC and VSS (CFLTC).
Programmable shutdown	SD-PROG	A shutdown feature has been designed into a pin
Separate pin for logic ground	SEP-GND	Dedicated pin or logic ground for improved noise immunity
Separate sink/source outputs	SEP-OUT	Simplifies gate resistor selection, reduces BOM, and improves dV/dt control
Shoot-through protection	STP	Additional shoot-through protection logic such as interlock
Short-circuit clamping	SC-CLAMP	During short circuit the IGBT's gate voltage tends to rise because of the feedback via the Miller capacitance. An additional protection circuit connected to OUT+ limits this voltage to a value slightly higher than the supply voltage.
Shutdown	SD	Dedicated pin disables the IC outputs
Soft overcurrent shutdown	SD-SOFT	Dedicated pin turns off the desaturated transistor, preventing overvoltages
Truly differential inputs	TDI	± 70 VDC and ± 150 VAC ground-shift robustness of low-side gate driver ICs
Two-level turn-off	TLTO	Lowers VCE overshoots at turn-off during short circuits or overcurrent events
UL 1577	UL	Double galvanic isolation certification
Undervoltage lockout	UVLO	Ensures safe application operation by avoiding unexpected driver behavior at low voltages
VDE 0884-10 or VDE 0884-11	VDE	Reinforced galvanic isolation certifications for non-optical couplers

Infineon's industrial and general purpose gate-driver ICs utilize the following technologies:

- > (1) Coreless transformer technology (CT)
- > (2) Level-shifting silicon-on-insulator technology (SOI)
- > (3) Level-shifting junction-isolation technology (JI)
- > (4) Non-isolated technology (N-ISO)

Infineon gate-driver IC technologies

Non-isolated	Level-shift		Isolated
Low-side	Junction isolation (JI)	Silicon on insulator (SOI)	Coreless transformer
 <ul style="list-style-type: none"> > Comprehensive Families of single- and dual-low-side drivers with flexible options for output current, logic configurations and UVLOs (plus non-isolated TDI) > Rugged technology of the high-voltage gate drivers, and on the latest state-of-the-art 130-nm process > Industry-standard DSO-8 and small form-factor SOT23, WSON and TSNP packages 	 <ul style="list-style-type: none"> > Proven technology trustfully used in all high-voltage gate drive applications for over 20 years > Largest portfolio of 120 V, 200 V, 600 V, and 1200 V industry standard gate drivers using rugged proprietary HVIC process > Solution-specific motor-control and switch-mode power applications 	 <ul style="list-style-type: none"> > Infineon SOI technology for high-voltage applications with inherent integrated boot-strap diode capability and lower level-shift losses > Industry best-in-class robustness against negative VS transient spikes > Higher level of integration reduces BOM and total system cost 	 <ul style="list-style-type: none"> > Magnetically-coupled isolation technology provides galvanic isolation for industrial applications > Strongest gate-drive output currents (up to 14 A) reducing need for external booster circuits > Reliable and accurate protection precise & fast on-/off-switching, desat protection, active Miller clamp, isolation rating in different packages, VDE 0884-11 certification

Mobility & Battery Driven

Full range of best-in-class components

From EV charger and light electric vehicle (LEV) to service robotics and drones, Infineon's family of configurable half-bridge and three-phase gate driver ICs can be combined with powerful Infineon MOSFETs to provide the required power and efficiency. Automotive-specific gate drivers qualified according to AEC-Q100 are also available.

For battery-driven applications, saving battery power is the key. Infineon offers an excellent selection of gate driver ICs providing the highest-possible energy efficiency and top precision.

Renewable Energy

Powering an energy-smart world

Improving efficiency is the number one objective in the field of photovoltaics. Efficiency gains of as little as one percent can still yield enormous returns in renewable energy segment.

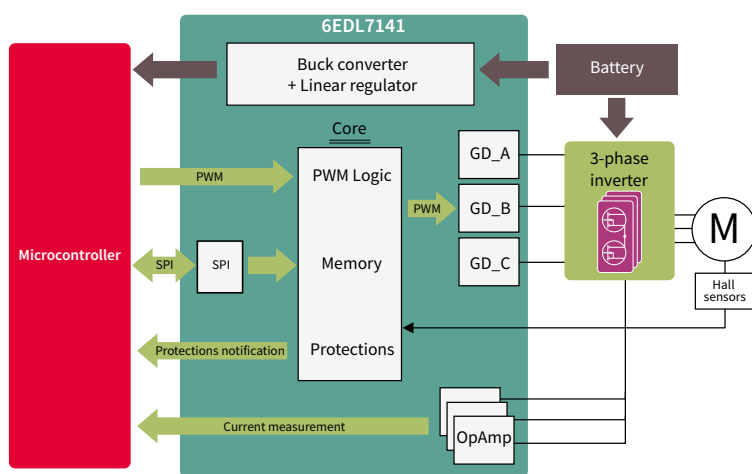

Infinion provides a comprehensive portfolio of high-performance gate driver ICs for photovoltaic inverters. By combining EiceDRIVER™ with super-junction MOSFETs such as CoolMOS™, IGBTs, Silicon Carbide (SiC) MOSFET such as CoolSiC™, as well as IGBT and SiC modules, Infineon enables solutions that maximizing uptime and energy production.

High-performance motor control

Next-generation fully programmable three-phase gate driver

The 6EDL7141, Infineon's latest three-phase motor control gate driver IC will allow our customers to develop their next generation of high-performance battery-operated products using BLDC or PMSM motors. Ideal applications include cordless power tools, gardening products, and automated guided vehicles. With over 50 programmable parameters using a built-in digital serial peripheral interface (SPI), the 6EDL7141 is fully configurable to drive a wide range of MOSFETs to yield the best possible system efficiency. The integrated buck regulator provides the power for both the microcontroller and the Hall sensors in the motor, further reducing peripheral components and the required PCB area. In addition, with a full suite of system protection features such as OCP, UVLO, over-temperature, and locked rotor detection, this dedicated motor controller will increase reliability and robustness in severe operating fault conditions.

Features and benefits

Key features
> Integrated power supply
> Programmable slew rate
> Programmable gate drive supply
> 3x current shunt amplifier
> ADC reference voltage of 5 V
> Complete dedicated motor control protection suite

Key benefits
> Reduced external components and PCB area
> Optimized efficiency and EMI
> Maximum flexibility to use different inverter
> Highly accurate current sense while saving external components
> Higher dynamic range to increase signal resolution
> Improve reliability and fault detection

EVAL_6EDL7141_TRAP_1SH

Single-shunt evaluation board for trapezoidal commutation of BLDC motors with 40 V OptiMOS™ 5 PQFN and XMC1404 MCU
 On-board programming dongle
 Featured IC: 6EDL7141

XMC™ ecosystem, enablement and partners

A comprehensive set of tools, products, components, and services are available for fast and efficient design with XMC™ microcontrollers.

Infineon enablement for XMC™ MCUs

DAVE™ – [infineon.com/dave](https://www.infineon.com/dave)

Professional and free-of-charge development platform

XMC™ library for Embedded Coder® – [infineon.com/matlab](https://www.infineon.com/matlab)

Model-based design from MATLAB® and Simulink® environment, download free of charge

IEC60730 class B library for XMC™ – [infineon.com/iec60730](https://www.infineon.com/iec60730)

Available for XMC™ industrial microcontrollers free of charge

Microcontroller/Probe™ XMC™ – [infineon.com/ucprobexmc](https://www.infineon.com/ucprobexmc)

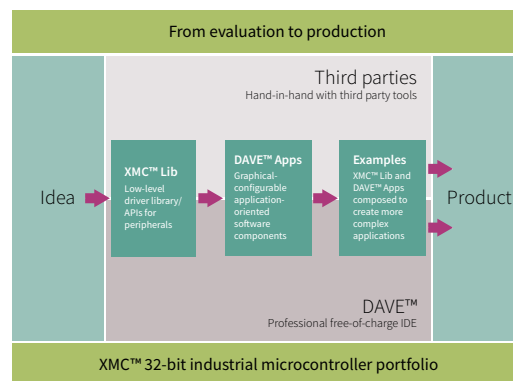

Free-of-charge version of microcontroller/Probe™ for XMC™ MCUs to build user interfaces for visualizing, observing, and control of the internals of XMC™ MCUs

XMC™ link – [infineon.com/xmmlink](https://www.infineon.com/xmmlink)

Functional isolated debug probe, based on SEGGER J-Link technology

In addition to a rich third party ecosystem and enablement landscape, which support the entire development cycle from evaluation to production.

For more [infineon.com/xmc-ecosystem](https://www.infineon.com/xmc-ecosystem)

Infineon's XMC™ 32-bit industrial microcontroller portfolio is designed for system cost and efficiency for demanding industrial applications. It comes with the most advanced peripheral set in the industry. Fast and largely autonomous peripherals can be configured to support individual needs.

Highlights include analog mixed-signal, timer/PWM and communication peripherals powered by either an Arm® Cortex®-M0 core (XMC1000 family) or an Arm® Cortex®-M4 core with a floating point unit (XMC4000 family).

XMC™ digital power explorer kit

The new digital power explorer kit is designed with the particular goal of making it easy for engineers to take the first steps into digital power control with XMC™ microcontrollers. It showcases both XMC™ families Arm® Cortex-M microcontrollers: XMC4000 and XMC1000, 30 V dual n-channel OptiMOS™ MOSFETs and [IRS2011S](#) gate drivers. The kit includes two different control card options, XMC1300 control card (Arm® Cortex®-M0) and XMC4200 control card (Arm® Cortex®-M4F), which allow designers to evaluate both XMC™ microcontroller families and make the right price/performance choice for their application.

Features and benefits

Key features
<ul style="list-style-type: none"> > Synchronous buck converter evaluation kit controlled with XMC4200 or XMC1300 Arm® Cortex®-M MCUs
<ul style="list-style-type: none"> > Onboard resistive load banks
<ul style="list-style-type: none"> > Featuring BSC0924NDI dual n-channel OptiMOS™ MOSFET and IRS2011S high- and low-side gate driver
Different control schemes possible <ul style="list-style-type: none"> > Voltage mode control > Peak current mode control (with slope compensation)

Key benefits
<ul style="list-style-type: none"> > Easy entry in digital power control applications
<ul style="list-style-type: none"> > Understand the details of voltage/peak current control and how to extract the maximum of XMC™ devices
<ul style="list-style-type: none"> > DAVE™ v4 APPs for buck converter and many more example

High power density 800 W 130 kHz platinum server design with XMC1300

The 800 W PFC CCM evaluation board demonstrates design and practical results of an 800 W 130 kHz platinum server PFC evaluation board based on Infineon devices, in terms of power semiconductors, non-isolated gate drivers, analog and digital controllers for the PFC converter, as well as flyback controller for the auxiliary supply. This evaluation board verifies the performance of the latest 600 V CoolMOS™ C7 superjunction MOSFET technology working at 130 kHz in a PFC CCM boost converter along with EiceDRIVER™ ICs and CoolSiC™ Schottky diode 650 V G5 using digital control.

Features and benefits

Key features	Customer benefits
<ul style="list-style-type: none"> > Classic PFC boost stage digitally controlled with XMC1302 including voltage and current loops > Protections, including cycle-by-cycle current protection > Run time debug with isolated UART to PC interface and PC software 	<ul style="list-style-type: none"> > High efficient PFC stage with a complete systemsolution from Infineon > HW and SW available > Higher switching frequency permits higher power density

	Power factor	>0.9 from 20% load		
	Efficiency	97% (peak)		

600 W half-bridge LLC evaluation board with 600 V CoolMOS™ C7 SJ MOSFET with digital control

The 600 W LLC digital control evaluation board shows how to design the half-bridge LLC stage of a server SMPS with the target to meet 80+ Titanium standard efficiency requirements. For this purpose, the latest CoolMOS™ technologies, 600 V CoolMOS™ C7 or P6 superjunction MOSFETs have been used on the primary side, and OptiMOS™ low-voltage power MOSFET in SuperSO8, BSC010N04LS, in the synchronous rectification secondary stage in combination with QR CoolSET™ ICE2QR2280Z, high- and low-side driver 2EDL05N06PF, low-side gate driver 2EDN7524F and a XMC4200 microcontroller.

Features and benefits

Key features	Customer benefits
600 W LLC half-bridge stage with synchronous rectification (SR) All controlled with XMC4200 including: <ul style="list-style-type: none"> > Start up (PWM to PFM) and burst-mode algorithms > Adaptive dead time and capacitive-mode detection > No hard commutation at any condition 	<ul style="list-style-type: none"> > Learn LLC topology with a complete system solution from Infineon > HW and- SW available > Close to customer solution > High efficiency → 97.8% > Reliability and power density

3 kW dual-phase LLC converter using XMC4400

The 3 kW dual-phase LLC demonstration board is an example of a high efficiency isolated DC-DC converter using the state-of-the-art Infineon components, both power devices and controller/driver ICs. The use of an advanced digital control using the XMC4400 microcontroller, together with the latest generation of CoolMOS™ and OptiMOS™ devices, allows achieving a very flat efficiency curve in the entire load range. The demonstration board is targeting the high voltage DC-DC stage of high-end telecom rectifiers.

Features and benefits

Key features	Customer benefits
<ul style="list-style-type: none"> > Full digital control by XMC4400 on the secondary side > Digital current sharing with phase shedding > Accurate algorithm able to prevent hard commutation and capacitive load mode in LLC operation 	<ul style="list-style-type: none"> > Full digital control by XMC4400 on the secondary side > Efficiency peak 98.5% and more than 97.2% in the entire load range > Easy monitoring and parameter setting via a graphic user interface

	Peak efficiency	>98.4%		

RGB LED lighting shield with XMC1202 for Arduino

The RGB LED lighting shield with XMC1202 for Arduino uses a DC-DC buck topology and is able to drive up to three LED channels with constant current. The shield itself is powered by a programmable XMC™ 32-bit Arm® MCU with embedded brightness color control unit (BCCU, XMC1200 MCU series), for flicker-free LED dimming and color control.

Features

- > Compatible with Arduino Uno R3 and XMC1100 boot kit from Infineon
- > Easily configurable for various light engines and any input voltage (within operating conditions)
- > Wide DC input voltage range
- > Simple I²C interface

Operating conditions

- > Nominal: 12-48 V input voltage (max. 6-60 V)
- > Average LED current up to 700 mA (max. peak current 1 A)

The Infineon shields mentioned above are hardware compatible with Arduino and Infineon's XMC™ boot and relax kits.

3 kW dual-phase LLC converter

XMC4800 automation board V2 – explore XMC4800 microcontroller based on Arm® Cortex®-M4

The XMC4800 automation board V2 uses Infineon’s industry leading XMC™ Arm® Cortex®-M4 microcontroller in combination with Infineon's supply, interface, communication and safety products. The XMC4800 automation board V2 is designed to evaluate the capabilities of the XMC4800 microcontroller especially in EtherCAT® slave applications and can be used with a wide range of development tools including Infineon’s free-of-charge Eclipse based IDE, DAVE™.

Features and benefits

Key features	Customer benefits

XMC™ wireless power controller – enabling wireless charging transmitter applications

Infineon's XMC™ wireless power controller, based on the Arm® Cortex®-M0 core, provides a powerful and cost-effective platform for high performance, smart and safe wireless charging applications. The XMC™ wireless power controller helps the next-generation wireless charging systems to meet strict safety, environmental and regulatory requirements, while still enabling industry-leading charging performance and efficiency. This controller works seamlessly with Infineon's power devices in a scalable architecture to provide a complete charging solution for everything from a fast-charge smartphone, to a 20 W robot, or a 60 W drone and beyond.

Features and benefits

Key features	Customer benefits
› Supports inductive and resonant charging methods	› Supports 15 W charging and existing standards, including fast charging of smartphones
› Power levels up to 60 W	› Full power 15 W without exotic thermal management
› Multiple industry standard and custom charging profiles using the same hardware architecture	› Achieves charging rates equivalent to wired charging
› Single- and multi-coil transmitters	› Supports custom-charging profiles and industry standards on the same hardware
› Half- and full-bridge support	› Foreign object detection (FOD) with improved accuracy quality-factor monitoring
› Variable and fixed frequency transmitter types	› Foreign object detection capability can be extended beyond existing standards to improve detection
› Buck and boost topologies	› Supports custom coils, and greater than three coils
› Integrated flash for parameter storage	
› Voltage supply 1.8-5.5 V	
› Space saving VQFN-40 package	

For a detailed overview of Infineon's wireless charging solutions, check the [Wireless charging](#) chapter.

XMC™ starter kits

Kits and evaluation boards

Xtreme2Go

Order number: KIT_XMC_2GO_XTR_XMC1400

- › XMC1400 family kit with ADAFRUIT, MikroE and Shields2Go connectivity. Extension for IoT and other cloud applications.
- › The XMC1400 series devices are optimized for motor control, power conversion and LED Lighting applications and Human-Machine Interface (HMI)

For more information on this product, please contact our [product support](#).

Platform2Go XMC4400

Order number: KIT_XMC_PLT_2GO_XMC4400

- › Equipped with an Arm® Cortex®-M4 based XMC™ microcontroller, the XMC4400 Platform2Go is designed to evaluate the capabilities of Infineon's XMC4400 microcontroller. It can be used with a wide range of development tools including Infineon's free of charge Eclipse based IDE DAVE™
- › This kit has the XMC4400 device with debugger plus Ethernet, CAN, Arduino, MikroBUS and Shields2Go form factor.

XMC1400 Arduino

Order number: [KIT_XMC1400_ARDUINO](#)

- › This kit utilizes Infineon's industry leading Arm® Cortex® M0 microcontroller in combination with Arduino form factor.
- › It can be used with a wide range of development tools including Infineon's free of charge Eclipse based IDE, DAVE™ and much more.

Platform2Go XMC4200

Order number: [KIT_XMC_PLT_2GO_XMC_4200](#)

- › Equipped with an Arm® Cortex®-M4 based XMC™ microcontroller from Infineon Technologies AG, the XMC4200 Platform2Go is designed to evaluate the capabilities of Infineon's XMC4200 microcontroller.
- › It can be used with a wide range of development tools including Infineon's free of charge Eclipse based IDE DAVE™
- › This kit has the XMC4200 device with debugger plus CAN, Arduino, MikroBUS and Shields2Go form factor.

RGB LED Lighting Shield

Order number: [KIT_XMC_LED_DALI_20_RGB](#)

- › One of the first intelligent evaluation boards compatible with Arduino as well as Infineon's XMC1100 BOOT KIT.
- › Designed to be easily configurable and combinable for different LED light engines and lamps, for fast prototyping and in-expensive evaluation of LED lighting applications.
- › The RGB LED lighting shield with XMC1302 uses a DC-DC buck topology.

XMC™ peripherals

IEC60730 class B library for XMC™

Supporting the XMC1xxx and XMC4xxx families

In collaboration with the consultancy Hitex, Infineon developed the IEC60730 – class B software library for XMC™ industrial microcontrollers for household electrical appliances. This is a dedicated software library for XMC™ MCUs with routines for internal supervisory functions and for self-diagnostics.

Extended documentation and pre-certified software libraries to XMC™ Cortex® Arm® based controllers are free of charge. For more information, please check: www.hitex.com/classb

AURIX™ – 32-bit microcontrollers

32-bit multicore TriCore™ – safety joins performance

AURIX™ is Infineon’s family of microcontrollers serving the needs of industrial applications in terms of performance and safety. Its innovative multicore architecture, based on up to six independent 32-bit TriCore™ CPUs at 300 MHz, has been designed to meet the highest safety standards while increasing the performance at the same time. Using the AURIX™ scalable platform, developers will be able to implement applications such as motor control and drives, PLC or any other automation application. Developments using AURIX™ require less effort to achieve the SIL/ IEC61508 standard based on its innovative safety concept and multiple HW safety features. Furthermore, AURIX™ has enhanced communication capabilities to support communication between CAN, LIN, FlexRay and Ethernet buses.

Features and benefits

Key features
› TriCore™ with DSP functionality
› Best-in-class real-time performance: up to six TriCore™ with up to 300 MHz per core
› Supporting floating point and fix point with all cores
› Up to 6.9 MB of internal RAM, up to 16 MB of flash
› Innovative single supply 5 V or 3.3 V
› IEC61508 conformance to support safety requirements up to SIL 3
› Embedded EEPROM
› Advanced communication peripherals: CAN FD, LIN, SPI, FlexRay, Ethernet

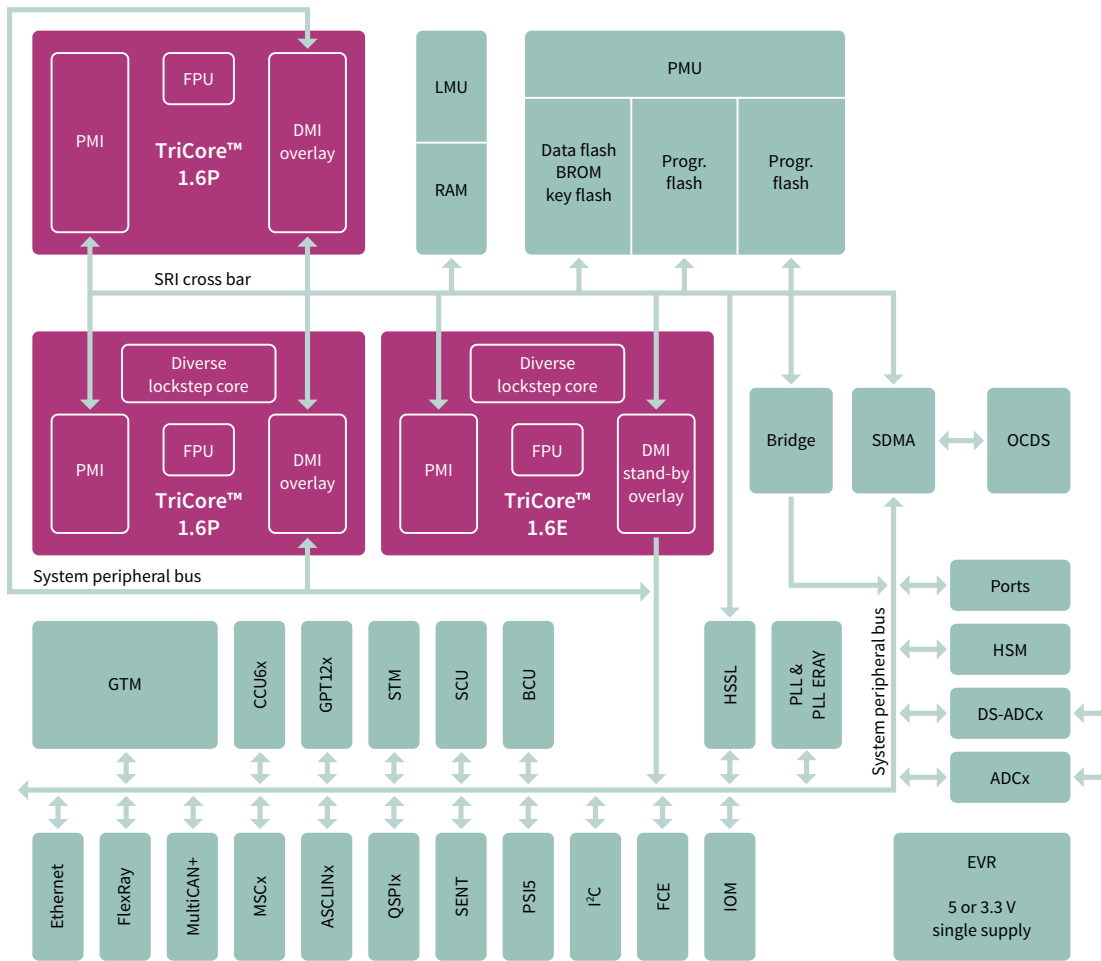

Customer benefits
› High scalability gives the best cost-performance fit
› High integration leads to significant cost savings
› High integration leads to reduced complexity
› Innovative supply concept leads to best-in-class power consumption

Applications
20-300 V MOSFETs
500-950 V MOSFETs
WBG semiconductors
Discrete IGBTs and silicon power diodes
Power ICs
Intelligent switches and input ICs
Gate-driver ICs
Microcontrollers

¹⁾ CIF = camera and external ADC Interface, FFT = fast fourier transform accelerator, FPU = floating point unit, PCP = peripheral control processor

²⁾ ASC = asynchronous serial channel, ASCLIN = asyn/synchronous local interconnect network, HSSL = high-speed serial link, I²C = inter-integrated circuit, LIN = local interconnect network, MLI = micro link interface, MSC = micro second channel, PSI5 = peripheral sensor interface 5, QSPI = queued serial peripheral interface, SENT = single edge nibble transmission, SSC = synchronous serial channel, CAN FD ISO11898-1:2015

³⁾ Ambient temperature range: A = -40°C ... 140°C, B = 0°C ... 70°C, F = -40°C ... 85°C, H = -40°C ... 110°C, K = -40°C ... 125°C, L = -40°C ... 150°C, X = -40°C ... 105°C

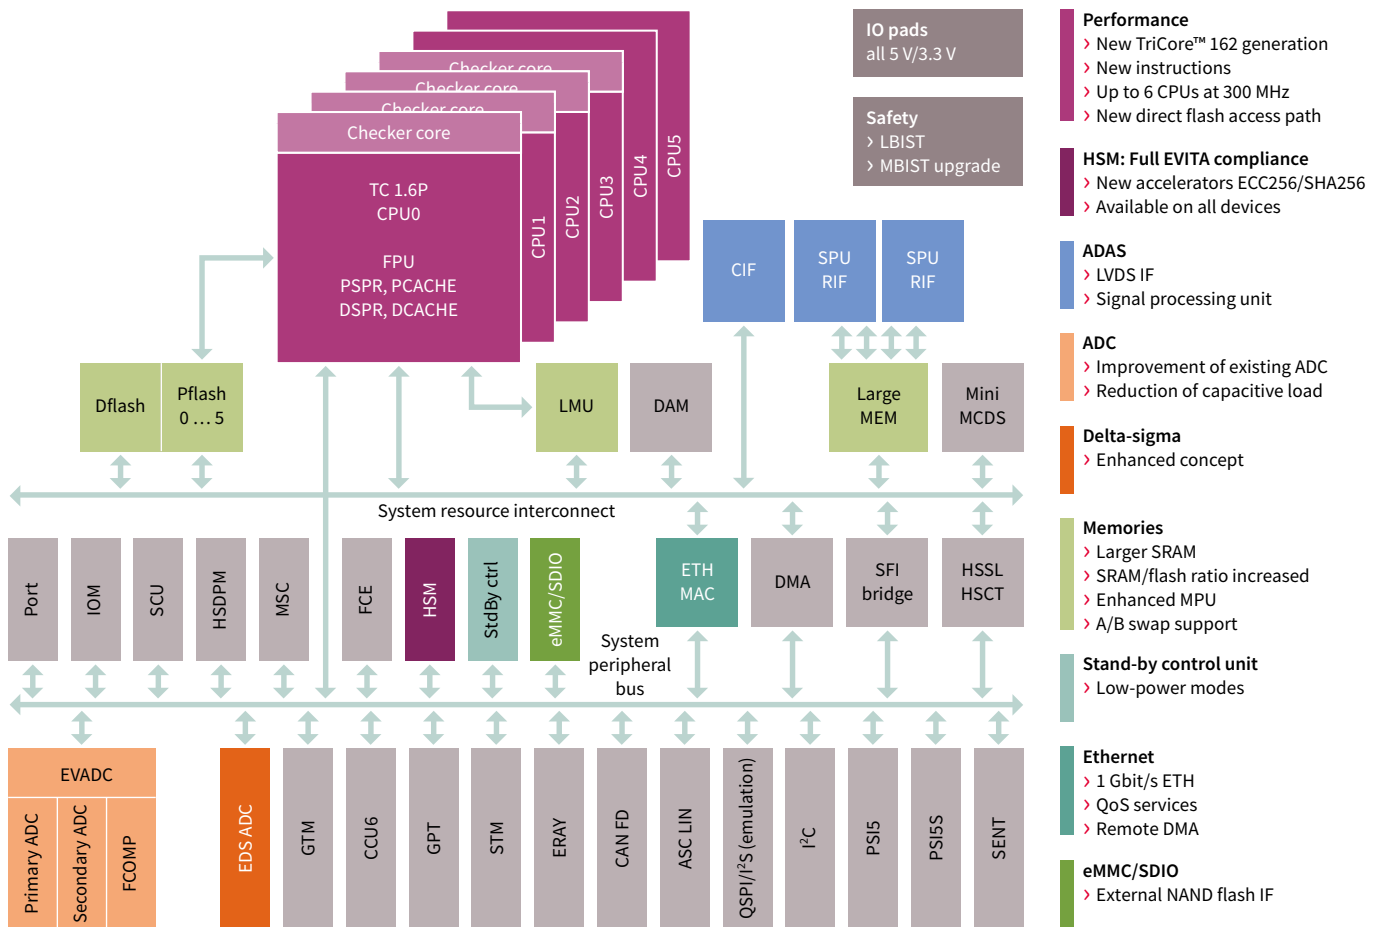

⁴⁾ EVR = embedded voltage regulator, HSM = hardware security module, STBU = stand-by control unit, WUT = wake-up timer

Evolution from TC2xx to TC3xx - Easy migration with focus on reuse

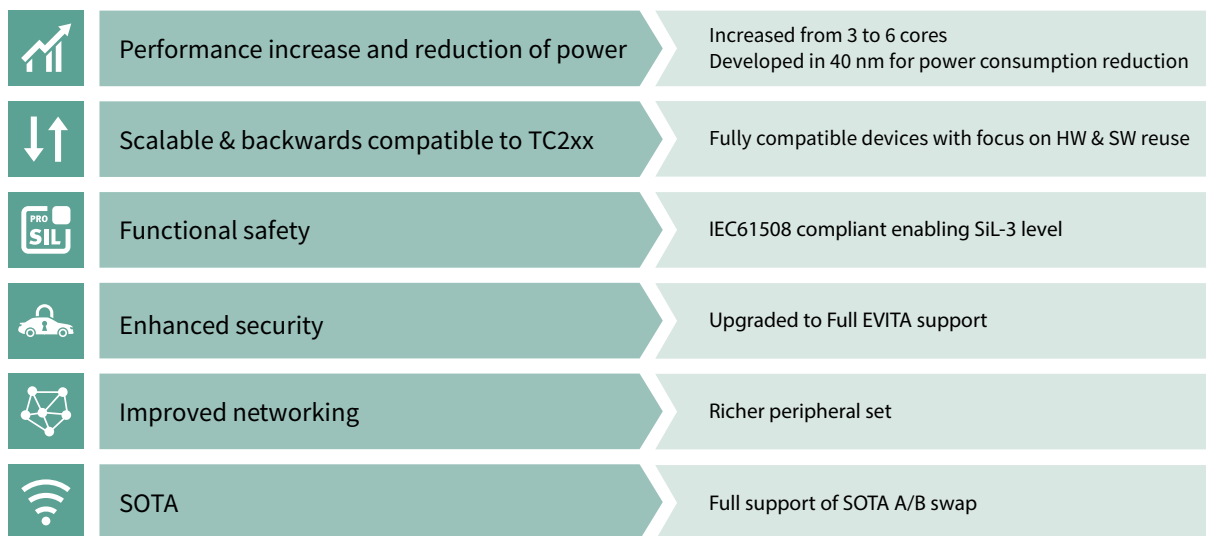

- › Fast conversion of existing AURIX™ TC2xx designs
 - Backwards compatibility
 - High AURIX™ TC3xx compatibility to pinout of existing QFP100/144/176 and BGA packages
- › Flexibility - scalability within the AURIX™ TC3xx family
 - Up-/Downgrade paths for devices in identical packages
 - Compatible pin-out of QFP/BGA package options enabling combination designs
- › Pin-to-pin compatibility between the devices of AURIX™ TC2xx/TC3xx and from generation to generation
- › A high scalability with a very large portfolio for both AURIX™ TC2xx and TC3xx

AURIX™ TC3xx family system architecture

AURIX™ TC3xx – scalable family - from low-cost to high-performance applications

AURIX™ TC3xx provides an upgrade on key parameters with focus on SW and HW reuse

AURIX™ TC3xx package scalability

L – Single lockstep core D – Dual core T – Triple core Q – Quadruple core X – Sextuple core
 1) An option of 300 MHz is also available

Control and actuate Sense and compute

- › Advanced package technologies deliver the best price/performance ratio
- › Customers can choose between different devices in the same pin-compatible package

MCU scalability

- › Performance and flash
- › Pin compatibility
- › Binary-compatible cores

Safety/security concept

- › ISO 26262 compliance
- › IEC61508 compliant

AURIX™ TC3xx

Power consumption

- › On-chip SC DC-DC high-efficiency power supply
- › Integrated standby controller

Connectivity

- › Ethernet: up to 2x1 GB
- › CAN FD: up to 12 channels
- › eMMC IF

1) SPU – Signal processing unit
 2) HSSL – High-speed serial link
 3) 8-bit SCR – Standby controller for low power modes
 4) EVR – Embedded voltage regulator

AURIX™ starter and application kits

Infineon starter kits – 32-bit microcontrollers

AURIX™ Triboards Kits

- › Full evaluation board for development to write and debug your 1st programs
- › Includes getting started advice, free TriCore™ entry tool chain, technical documentation, compiler and debugger
- › TriBoard available for all productive silicon

AURIX™ TFT Kits

- › Low cost board for early evaluation with limited access to signals
 - › Additional touchscreen display for convenient handling
 - › TFT board available for every silicon
- Click on the following to find/purchase the kit:

Arduino AURIX™ TC275 ShieldBuddy Kit

- › The Hitex TC275/TC375 ShieldBuddy follows the Arduino standard
- › Compatible with 100's of Arduino application shields
- › Evaluation licenses available
- › Ideal for getting started on a high-end real time embedded industrial or automotive application as well as students and hobbyists

Arduino AURIX™ TC375 ShieldBuddy Kit

Order number: [KIT_A2G_TC375_ARD_SB](#)

- › Compatible with 100's of Arduino application shields
- › Evaluation licenses available
- › Ethernet
- › Ideal for getting started on a high-end real time embedded industrial or automotive application as well as students and hobbyists

AURIX™ TC275 Lite kit

- > AURIX™ TC275 device in LQFP-176 package
- > FTDI based debugger with micro USB
- > Use of Arduino Uno/compatible platform

AURIX™ TC375 Lite kit

- > AURIX™ TC375 device in LQFP-176 package
- > Ethernet PHY
- > FTDI based debugger with micro USB
- > Use of Arduino Uno/compatible platform

Discover our AURIX™ kits platform for more starter and application kits

Infineon application kits – 32-bit microcontrollers

24 GHZ Radar

Based on the Infineon AURIX™ and MMIC BGT24A families

- › BGT24A transceiver MMIC family, e.g. BGTA24ATR12,
- › 2-bit radar microcontroller family, e.g. SAK-TC264DA-40F200
- › FFT acceleration engine and extended memory for radar image storage
- › Ethernet as measurement interface

60 GHZ Radar

XENSIV™ BGT60ATR24C**+ AURIX™ TC356TA****+ OPTIREG™ TLS4120D0EPV33/TLS715B0EJV50**

- › Modular architecture
- › Automotive qualified components
- › Virtual array processing (TDM MIMO)
- › Ultra-wideband operation of 4 GHz
- › Optimized performance versus power with SPU

Motor control

Order number: [KIT_AURIX_TC234_MOTORCTR](#)

- › TC234 application kit with TFT display incl. safety supply TLF35584
- › Driving of a 3-phase PMSM/BLCD (12 V/max. 50 W)
- › BLDC motor from Nanotec integrated
- › Software available with flexible configuration

Motor control board AURIX™ TC387

Order number: [KIT_AURIX_TC234_MOTORCTR](#)

- › TC387 Application Kit with TFT Display incl. safety supply TLF35584
- › eMotor Power board: 3-phase motor control power board with [TLE9180D-31QK](#) 3-phase gate driver IC, MOSFET power stage, and auxiliary components
- › Commands and monitoring via TFT touch screen
- › Field oriented control (FOC) algorithm using 3-phase current sensing (EVADC) encoder as position sensor (GPT12) and AURIX™ GTM as PWM generator

Infineon application kits – 32-bit microcontrollers

Wireless charging: the beast 1.0

- > WPC Qi v1.2.4 certified
- > Support fast charging enabled devices (7.5W and 9W)
- > AUTOSAR support
- > Improved accuracy Foreign Object Detection (FOD)

Wireless charging: the beast 2.0

- > Beast 2.0 is powered by the high-performance Infineon AURIX™ or Traveo™ II
- > Latest WPC Qi functionality
- > Supports 15W charging for Qi-certified devices
- > Improved accuracy Foreign Object Detection (FOD)
- > Supports future products and standards with field-upgradeable [Pantheon™ software](#)

Industrial robotics

Application example

Application features

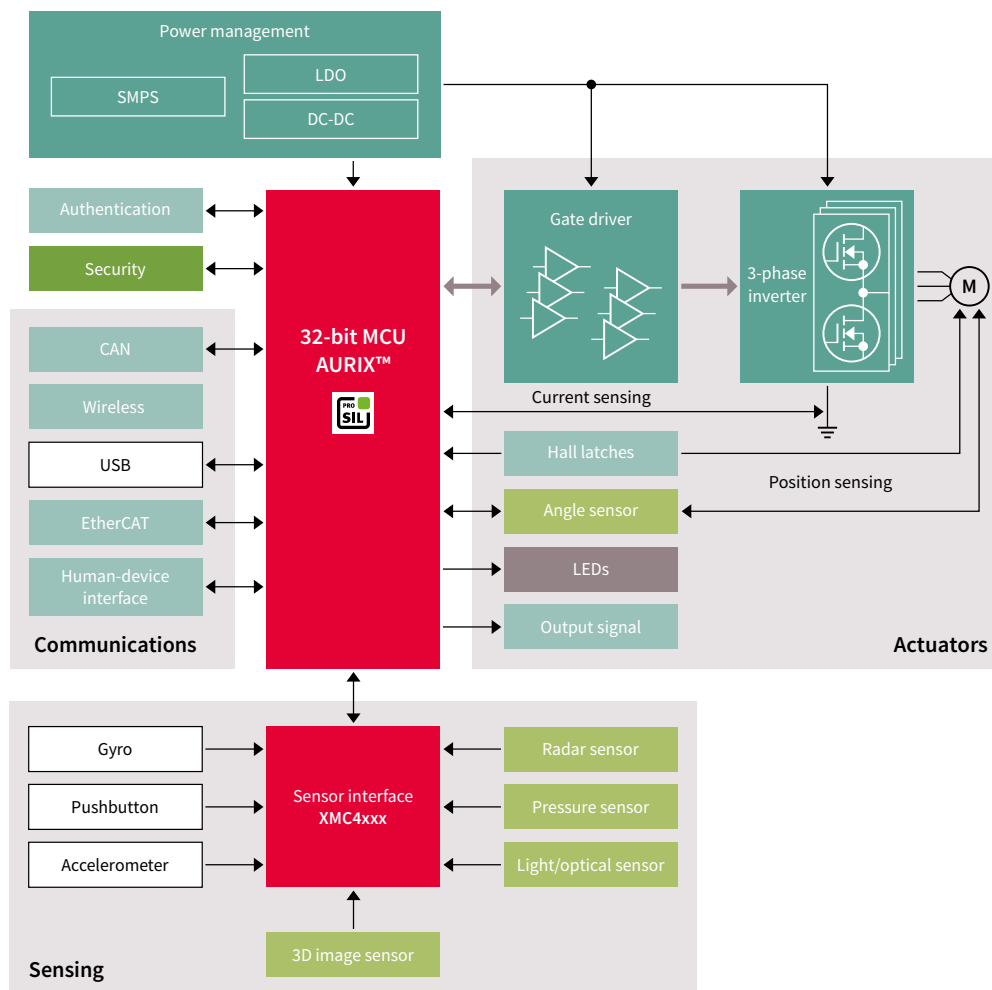

- > High computing performances
- > High level of accuracy, integration and efficiency
- > Safety management in line with current norms
- > Various topologies for axes, joints and motors
- > Security features that protect intellectual property from counterfeiting

System benefits

- > High computing performance: up to 6x 300 MHz
- > High flexibility thanks to tailored peripherals
- > Integrated safety support (EN ISO 10218 and ISO/TS15066)
- > Integrated security with hardware security module
- > Robust 3 V-, 5 V-, LVDS – PortPins
- > Large portfolio with long-term availability

Suggested products

- > TC23x
- > TC33x
- > TC36x
- > TC37x
- > TC38x
- > TC39x
- > XMC4xxx

Microcontroller PDH partner

Preferred Design Houses (PDH) and software resellers –
AURIX™ Traveo and PSoC, AURIX™ tools and software

AURIX™ Tools and Software

To enable customers to achieve optimal performance when using the powerful AURIX™ architecture, Infineon has built up a network of strong partnerships with companies highly specialized in multicore software development. Infineon's multicore partners can offer the best multicore expertise and tools on the market for each stage of the software design process, covering everything from the initial multicore knowledge acquisition phase right up to final optimization of the multicore software.

AURIX™ Embedded Software

- > AURIX™ Applications software
- > Autosar
- > Non-Autosar OS/RTOS

<p>Premium (Consultancy mode)</p> <p>To be agreed between customers and PDH</p>	<ul style="list-style-type: none"> > Project management and project-specific application support > Specification of general software architecture, defining required layers, control and data flow structure etc. > Specification and implementation of custom device drivers > Optimization of software components with regard to speed/code size 	<ul style="list-style-type: none"> > Software testing > Support for project-specific functional safety engineering > Project-specific support for security solution > Safety support > Security support > Multicore support

Preferred Design Houses (PDH)

The preferred design house extends the support force by specifying and customizing the know-how. Furthermore, it brings an additional value for customer service. The preferred design house supports the set up for systems using AURIX™ and XMC™, including software and other Infineon products. Our partners are trained to use AURIX™ and XMC™.

TRAVEO™ II portfolio

Thanks to its special features the Traveo™ II family is the perfect match for industrial applications. With processing power and network connectivity built into a single Arm® Cortex®- M4F and dual Cortex®- M7F, the Traveo™ II family comes up with an enhanced performance up to 1500 DMIPS and a high-performance CPU operating up to 350 MHz.

TRAVEO II™ kits

CYTVII-B-E-BB

- › The **CYTVII-B-E-BB** is a generic base board that can be connected to compatible Traveo II entry or high-end evaluation boards so as to extend its functionality
- › Connects to most CYTVII-B-E-xxx and CYTVII-B-H-xxx evaluation boards

CYTVII-B-E-176-SO

- › The **CYTVII-B-E-176-SO** evaluation board is based on the Traveo II entry family of devices.
- › Traveo™ II is CYT2B78CADES

CYTVII-B-E-1M-SK

- › The **CYTVII-B-E-1M-SK** is a low-cost easy to use evaluation board based on the Traveo II entry family of devices.
- › Traveo™ II CYT2B75CADES MCU
- › Designed in an Arduino form factor so that users can connect many off-the-shelf Arduino shields to it, to expand its functionality

CYTVII-B-H-8M-320-CPU

- › The **CYTVII-B-H-8M-320-CPU** evaluation board is based on the Traveo™ II high-end family of devices.
- › Traveo™ II CYT4BFCCHCES MCU
- › Audio, Ethernet, SD Card, SMIF

Embedded Power ICs

System-on-chip solution for motor control applications

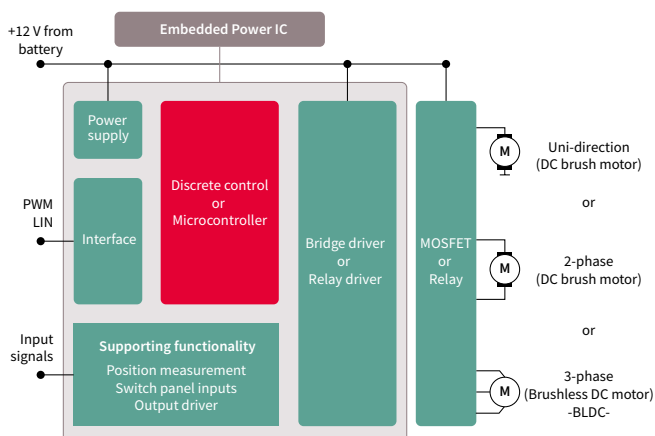

Infineon's Embedded Power ICs include a 32-bit Arm® Cortex®-M microcontroller, a voltage regulator, the communication interfaces, along with the driving stages for motor control applications. These system-on-chip solutions offer an unmatched level of integration of all functions required to sense, control and actuate a motor. They save space and energy, improve the overall system reliability through advanced diagnosis features and reduce the overall cost due to a minimum number of external components. They perfectly fit with a range of motor control applications where a small package form factor and a minimum number of external components are essential.

Criteria	TLE984x	TLE9845	TLE9850/1	TLE985x	TLE986x	TLE987x

Junction temperature levels	150°C	150°C	150°C and 175°C	150°C and 175°C	150°C and 175°C	
Packages	VQFN-48-31		VQFN-48-31 VQFN-48-29	VQFN-48-31 VQFN-48-29	VQFN-48-29 and VQFN-48-31 (TQFP-48-10 planned)	

Features and benefits

Key features
> Extensive diagnostics and protections embedded within the system-on-chip
> Minimum number of external components needed
> Platform based approach with compatible software between the product families
> Data processing, actuation and sensing integrated into the product with 32-bit Arm® Cortex®-M
> Compact package with 7x7 mm footprint (VQFN-48/TQFP-48)
> Intelligent power saving modes including stop and sleep mode and energy management for external sensors (on demand)

Customer benefits
> High levels of system reliability
> Reduced cost
> Support multiple and flexible designs with minimal effort
> Space saving
> Energy saving

- > Embedded Power ICs enable mechatronic motor control solutions for either relay, half-bridge or full-bridge DC and BLDC motor applications
- > They are supported by a complete development tool chain provided by Infineon and third party vendors. The tool chain includes compilers, debuggers, evaluation boards, LIN low level drivers and configuration tools as well as variety of example software code.

BLDC Motor Control Shield for Arduino

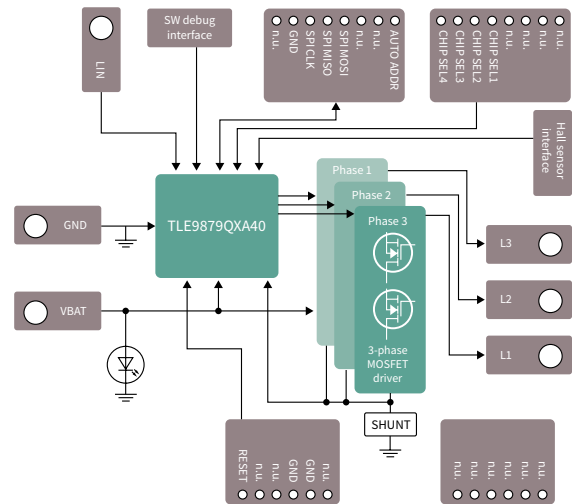

3-phase motor control shield with [TLE9879QXA40](#)

The BLDC Shield for Arduino uses the [TLE9879QXA40](#) chip, which is a part of the TLE987x family of the Infineon Embedded Power IC portfolio. It enables the shield to drive 3-phase BLDC motors with a variety of different features. One Arduino base board can control up to four BLDC shields via SPI. The BLDC Shield firmware provides an auto-addressing functionality. Every shield in the stack can be controlled independently and run completely different motor control algorithms if desired.

The shield implements three different advanced motor control algorithms:

- > Sensorless field-oriented control (FOC),
- > Block commutation with back EMF (BEMF)
- > Hall based block commutation (HALL)

The firmware can be changed using the SWD Interface. Additional connectors for voltage supply, motor-phases and hall sensors speed up the evaluation.

Features and benefits

Key features
> Implemented motor control algorithms (FOC, BEMF, Hall)
> Controlled over Arduino via SPI
> Compatible with the Arduino Uno or the Infineon XMC™ baseboard
> Up to four shields can be used simultaneously
> Each shield can be controlled independently
> Motor parameters can be set for each shield individually

Customer benefits
> Easy to use API, allowing the user to quickly setup an application
> High performance BLDC motor control in form of the TLE987x chip

Our BLDC Shield for Arduino comes with a library which includes a collection of code that makes it easy for you to run your project. The Arduino library offers an intuitive API to quickly setup and configure an application.

CAN-FD transceivers

High- and low-speed CAN-FD Transceivers for automotive and many other applications

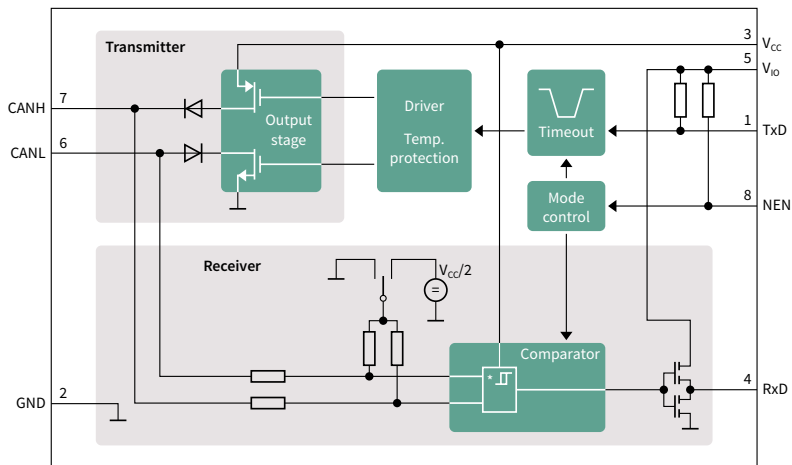

Recently the automotive industry newly established the CAN-FD (Flexible Data-rate) protocol for faster CAN communication up to 5Mbit/s and CAN PN (Partial Networking) for improved energy efficiency.

Dependent on the respective network architecture and the related ECU supply path, different transceiver types are used. Infineon transceivers ensure reliable communication and help minimizing the current consumption. The products provide the best value by its high performance, ruggedness and reliability.

Features and benefits

Key features	Key benefits
<ul style="list-style-type: none"> > Transmission rates up to 5 Mbit/s ISO11898 compliant 	<ul style="list-style-type: none"> > Low current consumption

Infineon XENSIV™ – sensing the world

Infineon XENSIV™ sensors are exceptionally precise thanks to industry-leading technologies. They are the perfect fit for various customer applications in automotive, industrial and consumer markets.

From the world leader in sensing technology, XENSIV™ sensors smartify lives by enabling “things” to “see”, “hear”, “feel”, “smell” and therefore intuitively “understand” their environment. As a result of proven quality and outstanding reliability, customers can rely on XENSIV™ for system stability, durability and integrity. Providing high accuracy and best-in-class measurement performance, XENSIV™ sensors add great value to customer applications. More than 40 years of experience in sensing solutions and a deep-rooted system understanding result in the broadest portfolio of ready-to-use sensor solutions on the market. Ecosystem partners and our customers partner with us for leading technologies, perfect-fit solutions and continuous innovation.

In the Internet of Things, sensors are omnipresent and mark the starting point of each and every IoT system. They collect all kinds of data on their surroundings, providing the entry point for all subsequent functions and features. Building on its well-founded systems expertise, Infineon’s broad portfolio in the XENSIV™ family contains ready-to-use solutions to enable a fast time-to-market and reliable functionality for applications in the area of smart home & smart building, smart things, smart factory or smart cars.

Today, we are already inspiring the next generation of smart environments, capable of understanding and responding to human communication. Infineon’s semiconductors are at the very heart of machine-to-machine (M2M), human-machine interface (HMI), mobile and wireless infrastructure technologies. As the technological boundary between humans and machines gradually disappears, these devices need even more advanced intelligence, enriched with voice assistance capabilities and the latest sensor fusion innovations, not to mention robust security technologies to protect personal data. Infineon’s sensors and microphones are already delivering this intelligent functionality and inspiring the next step in mobile connectivity.

Absolute pressure sensors (MAP and BAP)

Infineon's pressure sensors offer the highest quality and accuracy for safety-relevant automotive, industrial, or consumer lifestyle applications. Typical safety-related automotive pressure sensing applications such as side-impact and pedestrian protection call for the highest quality and accuracy standards with full ISO 26262 compliance. Our XENSIV™ family includes integrated pressure sensors that tick all these boxes with PSI5 peripheral sensor interfaces for a safety-critical use case. Discover our highlight product dedicated to 2-wheelers: KP212 enables lower CO₂ emissions, as well as lower fuel consumption, which makes it the right fit product worldwide to fulfill emission regulation requirements such as CN6 and Bharat 6. Of course, these sensors can also be used in industrial control, consumer applications, as well as medical applications.

KP21x/KP22x – Analog manifold air pressure sensor IC family (MAP + turbo MAP)

Features

- › Manifold air pressure measurement – MAP and turbo MAP
- › Excellent accuracy of up to 1.0 kPa over a large temperature range
- › Ratiometric analog voltage output proportional to the applied pressure
- › Output signal fully compensated over pressure and temperature
- › Pressure range from 10 to 400 kPa
- › Temperature range from -40 to +140°C
- › Output clamping (optional)
- › Complete product family available with multiple transfer function
- › Reverse polarity protection
- › Green SMD package

KP23x – Analog barometric air pressure (BAP) sensor IC family

Features

- › Absolute air pressure measurement
- › Excellent accuracy of 1.0 kPa over a large temperature range
- › Ratiometric analog voltage output proportional to the applied pressure
- › Output signal fully compensated across pressure and temperature range
- › Pressure range from 40 to 165 kPa
- › Temperature range from -40 to +125°C
- › Serial service interface
- › Open bond detection (OBD) for supply and GND
- › Inverse polarity protection
- › Green SMD package

KP25x/KP264 – Digital barometric air pressure (BAP) sensor IC family

Features

- › Absolute air pressure measurement
- › Excellent accuracy of 1.0 kPa over a large temperature range
- › Real 10-bit pressure resolution
- › Integrated temperature sensor
- › Real 10-bit temperature resolution
- › Power-down mode for reduced power consumption
- › Self diagnosis features
- › Output signal fully compensated across pressure and temperature range
- › Pressure range from 40 to 165 kPa
- › Temperature range from -40 to +125°C
- › Green SMD package

ISO 26262
ready

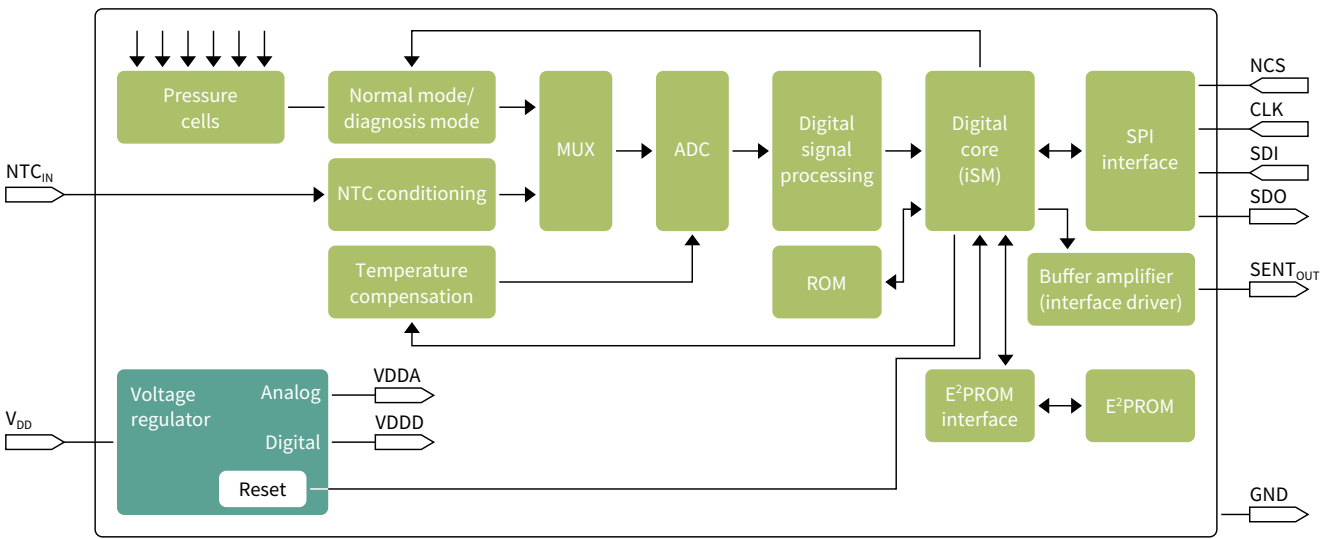

KP276

Media robust MAP sensor with digital interface

Features

- › Media robustness for current automotive requirements
- › Digital single edge nibble transmission (SENT) interface (282 clock ticks)
- › Excellent accuracy of ± 0.77 percent FSS
- › Green SMD package
- › Temperature range -40 to +170°C
- › Integrated NTC temperature sensor functionality with fast start up time (typ. 10ms)

High-precision coreless current sensors for industrial applications

Infineon's current sensors provide accurate and stable current measurement up to 120 A. The products are intended for use in high-voltage industrial applications such as electric drives, photovoltaic inverters, chargers and power supplies. The coreless open-loop sensors are based on Infineon's precise and stable Hall technology. Thus, the output signal is highly linear over temperature and lifetime. Due to a lack of an iron core, the sensor signal doesn't show hysteresis and it doesn't suffer from saturation. Thanks to the integrated current rail there is no need for external calibration. The differential measurement with two Hall cells ensures high accuracy even in a noisy environment with cross-talk from adjacent current lines or magnetic stray fields. Highlights of the XENSIV™ TLI4971 include best-in-class thermal performance for high currents as a result of its innovative TISON-8 package as well as isolation against high voltages. The two output pins for fast overcurrent signals can be used for pre-warning and system shut-down. Designers can program the threshold levels of the overcurrent signals and thus adapt them to individual requirements without any external components.

Features

- › Integrated current rail with typical 220 $\mu\Omega$ insertion resistance enables ultralow power loss
- › Small form factor, 8x8 mm SMD, for easy integration and board area saving
- › Highly accurate, scalable, DC and AC current sensing
- › Bandwidth of 240 kHz enables wide range of applications
- › Very low sensitivity error over temperature (< 2.5%)
- › Excellent stability of offset over temperature and lifetime
- › Galvanic functional isolation up to 1150 V peak VIORM; partial discharge capability of at least 1200 V; 4 mm clearance and creepage
- › Differential sensor principle ensures superior magnetic stray field suppression
- › Two independent fast over-current detection (OCD) pins with configurable thresholds enable protection mechanisms for power circuitry (typical < 1.5 μs)
- › Pre-calibrated sensor

Applications

- › Electrical drives (up to 690 V)
- › Photovoltaic inverter
- › General purpose & GAN based inverters
- › Chargers
- › Power supplies

1) Total error over lifetime and temperature

Hall switches

The energy-saving option with excellent accuracy, robustness, and quality

TLE/TLI/TLV4961/64/6: Energy-efficient Hall switch family for up to 32 V

The TLE/TLI/TLV496x-xM/L family of Hall switches saves energy and enables designers to create precise, compact systems. With an operational current consumption of just 1.6 mA, TLE/TLI/TLV496x-xM/L products can cut energy consumption up to 50 percent compared with similar competitor products. Thanks to its small magnetic hysteresis, the family paves the way for precise switching points in systems. The integrated temperature profile compensates magnetic drifts and enables stable performance over temperature and lifetime. TLE/TLI/TLV496x-xM products come in the small SOT23 package. The sensors also feature an integrated functionality test for better system control.

Features

- › Current consumption of just 1.6 mA
- › 3 to 32 V supply voltage range (over voltage up to 42 V)
- › 7 kV ESD protection (HBM)
- › Overtemperature and overcurrent protection
- › Temperature compensation
- › Smallest SOT23 package
- › Dedicated products for industrial applications (TLI496x)
- › AEC-Q100 qualified
- › Electrical drives

Applications

- › Window lifter (index counting)
- › Power closing (index counting)
- › Gear stick (position detection)
- › Seat belt (position detection)
- › BLDC commutation
(e.g. wiper seat belt pretensioner, pump, seating)
- › Service robots
- › Power tools
- › White goods
- › Electrical drives

TLE/TLI4963/65-xM

5 V high-precision automotive/industrial Hall-effect sensors

By offering an excellent magnetic behavior Infineon's switches are ideally suited for:

- > Index counting application with a pole wheel
- > Rotor position detection (BLDC motors)
- > Open/close detection

Features

- > 3.0 to 5.5 V operating supply voltage
- > Low current consumption 1.4 mA
- > ESD protection 4 kV HBM
- > Active error compensation (chopped)
- > High stability of magnetic thresholds
- > Low jitter (typ. 0.35 μs)
- > Operating temperature range:
 - from -40 to +170°C (TLE496x-xM)
 - from -40 to +125°C (TLI496x-xM)
- > Small SMD package SOT23

TLV496x-xTA/B

Precision Hall-effect sensor for consumer applications in leaded package

Features

- > 3.0 to 26 V operating supply voltage
- > Low current consumption 1.6 mA
- > ESD protection 4 kV HBM
- > Operating temperature range from -40 to +125 °C
- > Leaded package TO92S

Applications

- > BLDC motor commutation for consumer devices (e.g. e-bikes, fans, aircons)
- > Position detection e.g. flaps and control buttons

TLx4966

Two-in-one double Hall sensor

Features

- › Two Hall probes for information on speed and direction
- › Excellent matching between the two Hall probes
- › Hall plate distance of 1.45 mm
- › High resistance to mechanical stress by Active Error Compensation
- › TSOP6 package
- › TLE: AEC-Q100 qualified
- › TLI: JESD47 qualified

Applications

- › Window lifter
- › Sunroof
- › Automatic tailgate
- › Automated doors
- › Sun blinds
- › Garage doors

Linear Halls

TLE499x family: programmable analog/digital linear Hall sensor family

Infiniteon's family of TLE499x linear Hall ICs is tailored to the needs of highly accurate angular and linear position detection and current measurement applications. Each product measures the vertical component of a magnetic field and outputs a signal that is directly proportional to the magnetic field. These programmable linear Hall sensors come with different interface options: TLE4997 features ratiometric analog output, while TLE4998P comes with pulse width modulation (PWM), TLE4998S with single edge nibble transmission (SENT), and TLE4998C with short PWM codes (SPC). These high-precision 12-bit resolution linear Hall sensors feature EEPROM memory for flexible programming across a wide range of parameters.

Thanks to digital signal processing based on a 20-bit DSP architecture plus digital temperature compensation, these sensors deliver outstanding temperature stability compared with similar compensation methods. TLE4998 also includes stress compensation to withstand stress effects from the package, such as moisture, thus ensuring best-in-class accuracy over the device's lifetime.

Features

- › Best-in-class accuracy with low drift of output signal temperature range lifetime (including stress compensation in TLE4998)
- › Programmable transfer function (gain, offset), clamping, bandwidth, and temperature characteristics
- › AEC-Q100 qualified
- › Available in various packages including SSO-3-9 with two integrated capacitors to improve ESD and ESC behavior
- › Dual-die SMD package
- › TLE4997, TLE4998 ISO 26262-ready
- › TLE4999 fully ISO 26262-compliant for highest ASIL-levels

Applications

- › Detecting linear and angular position
- › Detecting pedal and throttle position
- › Steering torque measurement
- › Headlight leveling
- › High-current sensing
- › Seat position and occupant detection
- › Suspension control
- › Detecting gear stick/lever positions
- › Detecting liquid levels in fuel tanks
- › Current sensing e.g. for battery management

Dual linear Halls

Two sensors in one SMD package

The SMD package (TDSO) includes two independent sensors with separate power supplies and separate signal outputs. Due to special mounting technology, Infineon can keep dual-sensor package sizes very small to enable compact PCB layouts and small magnet sizes.

Infineon offers a wide range of Hall sensors in the TDSO package. The combination of two sensors in one package offers sensors redundancy, a feature that is especially interesting for new generation EPS steering systems with increased ISO 26262 requirements and other safety-critical applications. All sensors are automotive qualified.

Most products are also available as a single-sensor solution with only one sensor. The newest member of the TLE499x family, the [TLE4999I3](#), is a fully ISO 26262-compliant linear Hall sensor that includes 2 sensor channels on one chip. The SSO-3 package allows PCB-less application flexibility and the PSi5 interface enables low EMI at high-speed communication with minimum wiring.

Features

- › Two sensors in one package
- › Separate power supply and signal output
- › AEC-Q100 qualified
- › Temperature range from -40 to +125°C
- › Outstanding quality
- › Single-sensor versions available
- › 16-pin and 8-pin versions available
- › ISO 26262-ready
- › [TLE4999I3](#) ISO 26262-compliant

Automotive applications

- › Steering torque systems
- › Pedal position
- › Any other safety-critical application

Angle sensors

Compact designs in small outline packages

Highest variety - low end to high end, standardized and specialized in all four magnetic technologies: Hall, GMR, AMR and TMR

Infineon's magnetic sensor products TLE5501, are fast analog TMR-based angle sensors dedicated to automotive applications. Their fields of use range from steering angle applications, with the highest functional safety requirements, to motors for wipers, pumps and actuators, and electric motors in general. They are also ready to be used in industrial and consumer applications like robotics or gimbal. Angle sensors detect the orientation of an applied magnetic field by measuring sine and cosine angle components with monolithically integrated magnetoresistive elements.

Infineon's iGMR sensors are ideal for applications with a wide-angle range, such as BLDC motors or steering sensors. They are pre-calibrated and ready to use. Different levels of signal processing integration enable designers to optimize system partitioning. The XENSIV™ iAMR sensors also perfectly fit applications with the highest accuracy requirements, as they offer the best performance over temperature, lifetime, and magnetic field range.

iGMR, iAMR and iTMR based angle sensors

iTMR based angle sensors

Tunneling Magneto Resistive (iTMR) technology is offering high sensing sensitivity with a high output voltage, reducing the need for an internal amplifier. Thus, the sensor can be connected directly to the microcontroller without any further amplification. In addition, iTMR technology shows a very low temperature drift, reducing external calibration and compensation efforts. The iTMR technology is also well known for its low current consumption.

TLE5501

With the TLE5501 products, Infineon is currently launching the first angle sensor products based on iTMR technology. TLE5501 is available in two versions.

TLE5501 - product versions with different pinout:

- › [TLE5501 E0001](#): pin-compatible to TLE5009
automotive qualified acc. AEC-Q100
- › TLE5001 E0002: decoupled bridges for redundant external angle calculation and highest diagnostic coverage, realizing ISO 26262-compliant development ASIL D

Features

- › Large output signals of up to 0.37 V/V for direct microcontroller connection
- › Discrete bridge with differential sine and cosine output
- › Very low supply current: ~2 mA
- › Magnetic field range (20-100 mT)
- › Typ. angle error ~ 1.0 ° (overtemperature and lifetime)
- › DSO-8 package
- › AEC-Q100, grade 0: TA = -40°C to 150°C (ambient temperature)
- › For [TLE5501 E0002](#):
 - Reaching ASIL D with just one single sensor chip
 - ISO 26262-compliant development ASIL D

Applications

- › Steering angle sensor
- › BLDC motor commutation (e.g. wipers, pumps and actuators)
- › Angular position sensing for e.g. robotics or gimbal
- › Electric motors
- › Industrial automation
- › Safety applications

TLE5014(D)

Digital iGMR sensor with an easy-to-use plug-and-play concept for the highest functional safety applications

All XENSIV™ TLE5014 angle sensors are available as single and dual die products. The products come pre-configured and pre-calibrated as plug-and-play sensors and are easy to use. Customers can choose between the interfaces SENT, PWM, SPC, and SPI. On top of those protocol options, the sensors can be adapted to any kind of application setup via their programmable E²PROM interfaces. TLE5014 magnetic angle sensors meet ISO 26262 ASIL C for the single die and ISO 26262 ASIL D for the dual die versions. All products are ready for applications with the highest functional safety requirements. The sensors show an extremely small angle error of less than 1° across the entire temperature profile and lifetime. This is particularly helpful in applications with the need for very accurate position sensing such as steering angle sensing or motor commutation. Further application areas range from rotor position measurement, electric power steering (EPS), pedal position to any other kind of position measurement.

Features

- › Easy-to-use, plug-and-play sensors, pre-configured and pre-calibrated
- › Offering high flexibility:
 - Available as single and dual die products
 - 12 bit digital interface with protocol options PWM, SENT, SPC and SPI
 - E2 PROM and look-up table for customer configuration and calibration
- › High angle accuracy: max. 1.0° over temperature and lifetime
- › High voltage capability up to 26 V
- › Development fully compliant with ISO 26262
 - Developed acc. ASIL D level
 - Dual die sensors reaching ASIL D, single die sensors ASIL C metrics
- › Safety manual and safety analysis summary report available on request

Applications

- › Steering angle sensing (SAS)
- › Motor commutation
- › Rotor position measurement
- › Pedal position
- › Safety applications
- › Any other kind of high-accuracy position measurement

TLE5109A16(D)

Analog iAMR sensor with temperature compensation

Features

- › Features a differential or single-ended analog interface for sine and cosine values
- › Internal temperature drift compensation for gain and offset
- › Also available as a dual-sensor package
- › ISO 26262-ready
- › Typical 0.1° angle error over lifetime and temperature range after compensation (max 0.5°)
- › Available as single and dual die product

*Giant Magneto resistance

For more details on the product, click on the part number or contact our [product support](#).

3D magnetic sensors

TLV493D-A1B6/TLI493D-A2B6/TLI493D-W2B6 for consumer and industrial market

The **TLV493D-A1B6** sensor realizes accurate three-dimensional sensing with extremely low power consumption in a small 6-pin package. Capable of detecting the magnetic field in the x, y, and z-direction, the sensor is ideally suited for the measurement of linear, rotation, or 3-dimensional movements. Thanks to its small package and low power consumption, the TLx493D-AxB6 can be used in new applications, replacing potentiometer and optical solutions. Featuring contactless position sensing and high-temperature stability of the magnetic threshold, the sensor allows systems to get smaller, more accurate, and more robust.

Rotation movement

3D movement

Linear movement

Features

- › 3D magnetic sensing
- › Integrated temperature sensing
- › Low current consumption
 - 7 nA in power-down mode
 - 10 μ A in ultralow power mode
- › 2.8 to 3.5 V operating supply voltage
- › Digital output via a 2-wire standard I²C interface
- › B_x, B_y and B_z linear field measurement up to ± 160 mT
- › JESD47 qualified
- › 12-bit data resolution for each measurement direction
- › Various resolution options from 65 μ T/LSB to 130 μ T
- › Operating temperature range from -40 to +125°C

Product	Temperature range	Qualification	Linear magnetic range	Resolution	I _{DD}	Update rate	Package	Ordering code
TLV493D-A1B6	-40...125°C	JESD47	± 130 mT (typ)	10.2 LSB12/mT	7 nA – 3.7 mA	10 Hz – 3.3 kHz	TSOP6	SP001286056

TLV493D-A2BW	-20°C...85°C	JESD47	± 50 , ± 100 or ± 160 mT	7.7, 15.4 or 30.8 LSB12/mT	7 nA – 3.4 mA	6 Hz – 11,6 kHz	WLB	SP005542151

1) Half range mode

While the **TLV493D-A1B6** just supports a typical value for the linear magnetic range of ± 130 mT, the **TLI493D-A2B6** specification includes also a minimum value of ± 160 mT.

With the **TLI493D-A2B6**, broader microcontroller compatibility, as well as an enhanced feature set, is included.

New features

- › Sensor address read back
- › Short mode range setting, focusing on the half of the magnetic range, ensuring higher accuracy
- › Higher update frequency allows for an application field that requires faster update speed
- › Angular mode (for x and y read-out only)

Applications

- › Anti tempering protection in smart meters
- › Joysticks e.g. for medical equipment, cranes,
- › CCTV-control, game consoles
- › Control elements e.g. white goods multifunction knobs
- › Industrial joysticks
- › Ergonomic push and control buttons on domestic appliances and power tools
- › Position control in robotics

For more details on the product, click on the part number or contact our [product support](#).

3D magnetic sensors

TLE493D-A2B6/W2B6/P2B6 for automotive low power applications

Infineon's TLE493D-x2B6 enables all kind of automotive control element applications within the passenger compartment or under the hood with a temperature range of -40 to +125°C, with linear magnetic range requirements up to ± 160 mT.

Features

- › 3D magnetic sensing
- › Integrated temperature sensing
- › 2.8 to 3.5 V operating supply voltage
- › Low current consumption
 - 0.007 μ A in power-down mode
 - 10 μ A in ultralow power mode
 - Up to 10 power modes
- › Digital output via a 2-wire standard I2C interface
- › Bx, By and Bz linear field measurement ± 160 mT
- › AEC-Q100 qualified
- › 12-bit data resolution for each measurement direction
- › Various resolution options from 67 μ T/LSB to 134 μ T
- › Operating temperature range from -40 to +125°C

1) Half-range mode

The XENSIV™ sensor [TLE493D-A2B6](#) features include a sensor address read-back feature for additional communication verification, a half range mode focusing to half of the magnetic range, ensuring higher accuracy, and an angular mode (for x and y readout only).

With the TLE493D-W2B6/ P2B6 A0-A3, a 3D sensor family with an enhanced dynamic wake-up feature was developed. Four pre-programmed address options (A0-A3) are available, enabling for a fast start-up initialization when used in I2C bus configurations. Our sensors include enhanced test options, and safety documentation is available to enable the usage of this sensor in the context of ASIL B systems.

Compared to the previous products of this family the new [TLE493D-P2B6 A0-A3](#) family offers enhance precision in x-, y-, z- sensing direction, while otherwise featuring the same dynamic wake-up features, programmability, and test options like [TLE493D-W2B6 A0-A3](#). We provide safety documentation on request for usage of the sensor in the context of ASIL B systems.

Applications

- › Control elements for infotainment/navigation systems, air-conditions, multifunctional steering wheels, seat controls
- › Top column modules e.g. direction indicator, wiper control
- › Gear stick position sensing

Magnetic speed sensors

Easy to use, robust and cost-effective sensors for speed measurement

Infineon's Hall- and GMR-based magnetic speed sensors are designed to measure speed in safety and powertrain applications such as speedometers, ABS, camshafts/crankshafts, and automatic transmissions. They are also used in similar applications in the industrial sector. The sensors use a ferromagnetic gear tooth or encoder structure to measure linear or rotational speed and position. Hall sensor measuring rotational speed with a gear tooth and a magnetic encoder wheel. The majority of sensors also feature additional benefits such as integrated capacitors for high EMC robustness and the highest levels of ESD protection.

TLE4922

Highly robust, easy-to-use mono-Hall speed sensor with twist-independent mounting

This sensor is specially designed to provide an easy-to-use, robust and cost-effective solution for vehicle or industrial speed sensing applications. The TLE4922 can, therefore, be back-biased using a simple, low-cost bulk magnet, while providing a good air gap performance and switching accuracy. Its hidden adaptive hysteresis and calibration algorithm enable good accuracy over air gap jumps and immunity to vibration and run-out events.

Features

- › Large operating air gap capability
- › Flexible mounting (also known as Twist-independent mounting)
- › Hidden adaptive hysteresis
- › Low current consumption
- › Reverse magnetic polarity capability
- › Advanced protection technology
 - Reverse voltage protection at VS-pin
 - Short-circuit protection
 - Overtemperature protection
- › Wide operating temperature ranges of $-40^{\circ}\text{C} \leq T_j \leq \pm 150^{\circ}\text{C}$
- › High ESD robustness up to ± 4 kV HBM
- › 3-wire PWM voltage interface

Applications

- › Industrial applications
- › Two-wheeler and automotive vehicle speed

TLE4929 Fully programmable crankshaft sensor

The TLE4929 is an active Hall sensor ideally suited for crankshaft applications and similar industrial applications, such as a speedometer or any speed sensor with high accuracy and low jitter capabilities.

Features

- › Differential Hall speed sensor to measure speed and position of tooth/pole wheels
- › Switching point in the middle of the tooth enables backward compatibility
- › Robustness over magnetic stray-field due to the differential sensing principle
- › Precise miss fire detection through excellent jitter performance
- › Dedicated hybrid engine algorithm keeps combustion engine calibrated during an electric drive cycle
- › Digital output signal with programmable output-protocol including diagnosis interface
- › Direction detection and stop-start-algorithm
- › High accuracy and low jitter
- › High sensitivity enables large air gap
- › End-of-line programmable to adapt engine parameters
- › Can be used as a differential camshaft sensor
- › Automotive operating temperature range

XENSIV™ - IM67D130A MEMS microphones for automotive applications

As part of our comprehensive XENSIV™ sensor family, we now also offer high-performance MEMS microphones, qualified according to the state-of-the-art automotive quality standard AEC-Q103-003. Such microphones close the gap in the automotive industry, providing the best possible fit for automotive applications. These automotive XENSIV™ MEMS microphones combine our proven expertise in the automotive industry with our technical leadership in high-end MEMS microphones. They are suited to all applications inside and outside the car, where the best audio performance in harsh automotive environments is required.

Infineon automotive MEMS microphones will revolutionize the in-cabin user experience

Speech: Hands free / e-call / ICC
Enabling distortion free audio capturing for all speech related application thanks to their high SNR and low distortions

Interior

Speech: Microphone arrays – beamforming voice command
Making possible to operate infotainment systems with voice commands due to their narrow sensitivity matching for enhanced performance of beam-forming arrays

Interior

Active and road noise cancellation
Enabling a quite environment for a comfortable trip as such microphones are a good fit for ANC applications thanks to their flat frequency and stable phase response

Interior

In addition, they will enhance autonomous driving features ...
and even allow interaction from outside of the vehicle

- **Event sound detection / sirens detection / contact detection**
- **Road condition detection**

Contributing to road safety, as they can be employed to pick up sounds like sirens from emergency vehicles or to detect dangerous road conditions thanks their large dynamic range and acoustic overload point

exterior

Voice recognition / external interaction

Allowing external interaction e.g. for controlling certain functions via voice commands due to their good suitability for voice recognition use cases

exterior

Typical applications

- › Automotive qualification according to AEC-Q103, together with long term availability reduces design-in risk and effort
- › Increased operating temperature range allows flexible usage in automotive environment up to +105°C
- › Best in class audio performance (SNR, AOP, THD) for optimum speech quality and capture of distortion-free audio signals in loud environments as they can occur inside a car
- › Narrow sensitivity matching for enhanced performance of beam-forming (noise suppression) arrays
- › Flat frequency and stable phase response for optimal fit in acoustic noise cancellation use cases

XENSIV™ sensors for consumer and IoT applications

Intuitive sensing: giving things human-like senses for a better contextual awareness

Imagine a world where technology is unobtrusive and seamlessly integrated into our lives. Where intentional/deliberate communication between people and devices is no longer necessary. In this world, there is no need to push buttons or issue commands in order to activate devices, because technology is capable of interpreting implicit intentions and context. This enhances the user experience and makes it more natural – it almost seems like the devices around us intuitively understand what we want them to do. At Infineon, this future is already becoming reality. We develop sensor solutions that enable simple and effortless user interactions with all kinds of smart devices. Bridging the gap between the real and digital worlds, our technology is developed to make

life easier, safer, greener and more efficient. Our intuitive sensing solutions are at the very core of this mission. Reflecting our belief that the essential value of sensor technology lies in making our lives more convenient through seamless, natural interactions between people and sensing devices, our aim is to leave you free to focus on what really matters in life.

Choose your type of sense

Thanks to industry-leading technologies Infineon XENSIV™ sensors are exceptionally precise. They are the perfect fit for various customer applications in automotive, industrial and consumer markets.

Pressure sensors

Our digital barometric pressure sensors give designers the best choice when it comes small form factors, highest precision and accuracy over a wide temperature range, fast read-out speeds and low power consumption.

Radar sensors

Radar supports existing applications while providing features that enable completely new use cases. It measures velocity, range and angle, both horizontal and vertical, for precise position mapping and 3D tracking.

MEMS microphones

MEMS microphones overcome existing audio chain limitations and are designed for applications where low self-noise (high SNR), wide dynamic range, low distortions and a high acoustic overload point are required.

PAS CO2 sensor

Leveraging photoacoustic spectroscopy (PAS), Infineon has developed an exceptionally small CO₂ sensor that overcomes existing size, cost and performance challenges.

Today, sensors already enable interactions between people and devices

This interaction often depends on the interpretation and merging of information from different sources. Machines cannot yet read our minds and do not always have the information necessary to correctly evaluate a given situation. So, we sometimes have to explicitly tell devices what we want them to do. This can be inconvenient and time-consuming. Inspired by human nature, Infineon intuitive sensing solutions are designed to take the complexity out of our interaction with devices.

Reflecting a holistic approach, we combine different sensors with state-of-the-art software to create a comprehensive picture of the world around us. By fusing several smart sensors into one coherent intelligent system, our intuitive sensing solutions simplify complex technical processes and enable people to effortlessly interact with devices. These smart devices intuitively sense the world around them, determining what is expected and needed from them.

XENSIV™ MEMS microphones for consumer

Low self-noise (SNR), wide dynamic range, low distortions, high acoustic overload point

The popularity of voice user interfaces and the usage of audio recording to share information and experiences are increasing dramatically. However, the performance of microphones often limits the potential of today's cutting-edge devices. Not anymore!

Infineon XENSIV™ MEMS microphones introduce a new performance class for MEMS microphones that overcomes existing audio chain limitations. **IM69D130** is designed for applications where low self-noise (high SNR), wide dynamic range, low distortions, and a high acoustic overload point are required. Infineon's latest analog XENSIV™ MEMS microphone **IM73A135** pushes the level of audio performance even further (Highlights).

Features

- › 69 dB(A) signal-to-noise ratio (SNR)
- › Below 1 percent distortions at 128 dB SPL (130 dB SPL AOP)
- › Digital (PDM) interface with 6 µs group delay at 1 kHz
- › Tight sensitivity (-36 ±1 dB) and phase (± 2 deg) tolerances
- › 28 Hz low frequency roll-off
- › 4.0 x 3.0 x 1.2 mm³ package

Benefits

- › High fidelity and far-field audio recording
- › Matched, noise and distortion-free audio signals for advanced audio processing
- › Ultralow group delay for latency-critical applications
- › No analog components required

Typical applications

- › High-quality audio capturing: e.g. cameras, camcorders, conference systems
- › Voice user interface: e.g. smart speaker, home automation, and IoT devices
- › Active noise cancellation: headphones and earphones
- › Audio pattern detection: predictive maintenance, security or safety applications

Product portfolio

Product	OPN	Package	Current consumption	Sensitivity	Signal to noise	Supply voltage

Our new XENSIV™ IM73A135 sets a new performance benchmark in MEMS microphones

Infineon's latest XENSIV™ MEMS microphone **IM73A135** sets a new performance benchmark in MEMS microphones. Best-in-class signal to noise ratio (SNR) of 73 dB and a high acoustic overload point of 135 dB SPL enables crystal clear audio pick up. This high dynamic range microphone with a small footprint of 4 x 3 x 1.2 mm³ is based on Infineon's new Sealed Dual Membrane MEMS technology, which allows for better handling during assembly. The **IM73A135** allows designers to reach a level of high audio performance that was previously only achievable by ECMs while at the same time reaping the benefits inherent in MEMS technology.

Infineon's Sealed Dual Membrane (SDM) MEMS technology

Infineon's SDM MEMS technology is based on a miniaturized symmetrical microphone design. High-end studio microphones are based on a similar working principle to achieve a highly linear output signal. The MEMS structure is hermetically sealed and comprises two moving membranes and a capacitive plate. Sealing the capacitance area enables practically noise-free audio signal capturing, allowing for an increase in SNR from 70 dB up to 75 dB.

Infineon inside MEMS microphone partners

Building upon the superior XENSIV™ MEMS microphone performance, Infineon's extensive network of global partners offers customers a comprehensive portfolio of XENSIV™ MEMS microphone-based reference designs, as well as Infineon inside MEMS microphones that will propel audio performance to the next level even for the most demanding applications. Click on the buttons below to learn more and purchase our partner solutions.

XENSIV™ digital barometric pressure sensor

for mobile and wearable devices

Infinion's digital barometric pressure sensor family is the best choice for mobile and wearable devices due to its small form factor, high precision, and low power consumption. Pressure sensing is based on capacitive technology, which guarantees ultra-high precision (± 2 cm) and excellent relative accuracy (± 0.06 hPa) over a wide temperature range. The sensor's internal signal processor converts the output from the pressure and temperature sensor elements to 24-bit results. Each pressure sensor has been calibrated individually and contains calibration coefficients. The coefficients are used in the application to convert the measurement results to true pressure and temperature values. All sensors have a FIFO that can store the latest 32 measurements. Since the host processor can remain in a sleep mode for a longer period between readouts, a FIFO can reduce the system power consumption. Sensor measurements and calibration coefficients are available via the serial I2C/SPI interface.

DPS310

A barometric pressure sensor with very low power consumption is recommended for applications where power consumption is critical and the highest precision in pressure metering is required.

DPS368

DPS368 offers the best-in-class resolution (± 2 cm), a very fast read-out speed, and low current consumption. The sensor can be used in a harsh environment, as it is robust against water (IPx8 - 50 m underwater for 1 hour), dust and humidity. The small package size saves up to 80 percent of the space and makes the DPS368 ideal for mobile applications and wearable devices.

Typical applications

- > Drones: altitude detection and height stability
- > Health and fitness: accurate elevation gain and step counting (e.g. for smartwatches)
- > Outdoor Navigation: GPS start-up time/accuracy improvement; dead reckoning (e.g. in tunnels)
- > Indoor navigation: floor detection e.g. in shopping malls and parking garages
- > Smart home: micro weather forecasting; room temperature control; intruder detection
- > Airflow control: Smart filter replacement alarm (e.g. in home appliances); predictive maintenance
- > Health care: fall detection; respiratory devices; smart inhalers

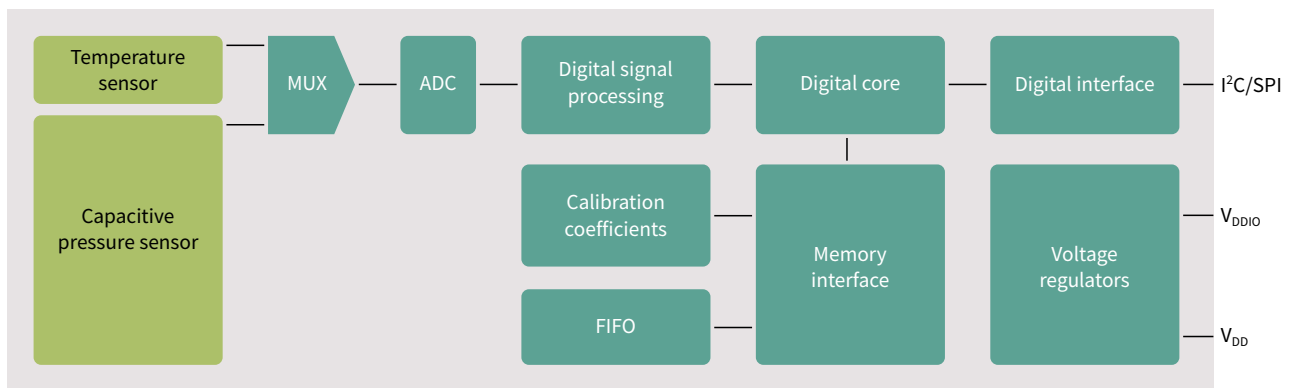

Key product features	DPS310	DPS368
Package size	2.0 x 2.5 x 1.0 mm	2.0 x 2.5 x 1.1 mm
Operating pressure range	300 ... 1200 hPa	
Operating temperature range	-40 ... 85°C	
Pressure level precision	± 0.002 hPa (or ± 0.02 m)	
Relative accuracy	± 0.06 hPa (or ± 0.5 m)	
Absolute accuracy	± 1 hPa (or ± 8 m)	
Temperature accuracy	0.5°C	
Pressure temperature sensitivity	0.5 Pa/K	
Measurement time	3.6 ms (low precision); 27.6 ms (standard mode)	
Average current consumption @ 1 Hz sampling rate	1.7 μ A pressure measurement, 1.5 μ A temp. measurement, standby 0.5 μ A	
Supply voltage	V_{DDIO} : 1.2 – 3.6 V; V_{DD} : 1.7 – 3.6 V	
Operating modes	Command (manual), background (automatic), standby	
Interface	I2C and SPI, both with optional interrupt

Infineon inside pressure sensor partners

Building upon its best-in-class technology, Infineon offers a full range of barometric pressure sensors as chipsets. Infineon's network of global partners offers customers a comprehensive portfolio of Infineon inside pressure sensors that will propel performance to the next level even for the most demanding applications.

XENSIV™ PAS CO2

High performance in a small size – Introducing a disruptive CO₂ sensor based on photoacoustic spectroscopy (PAS)

Infineon's XENSIV™ PAS CO2 breaks the boundaries of CO₂ sensing with its exceptionally small form factor and high accuracy.

Measure what matters with our XENSIV™ PAS CO2 sensor

CO₂ measurement contributes to improvements in health, comfort and productivity as well as energy efficiency. Even at moderate levels, CO₂ can have a negative impact on health and productivity, causing drowsiness and headaches. Fortunately, smart indoor air quality sensors can “smell” rising levels of CO₂ and either alert the user or trigger a system response. Awareness of indoor air quality is further increasing as a result of the COVID-19 pandemic, making accurate, affordable monitoring solutions like XENSIV™ PAS CO2 more important than ever. Given the correlation between CO₂ and aerosol concentration, CO₂ sensors can contribute to mitigating the transmission of not only COVID-19 but also other airborne illnesses such as the common cold and influenza. Furthermore, CO₂ sensors can facilitate demand-controlled ventilation, leading to improvements in energy efficiency and significant savings on energy bills.

Accurate, real-time CO₂ measurement thanks to superior MEMS technology

Widespread adoption of CO₂ sensors has so far been hampered by size, performance and cost constraints. Infineon's XENSIV™ PAS CO2 sensor leverages photoacoustic spectroscopy (PAS) technology to provide an exceptionally small, real CO₂ sensor that is both highly accurate and cost-effective. Infineon's leading position in MEMS technology is the foundation for this unique and accurate CO₂ detection approach. Reliable CO₂ measurement enables smart monitoring of indoor air quality, facilitating improvements in health, productivity and overall well-being. These features make the XENSIV™ PAS CO2 sensor ideal for applications in building automation as well as for integration into consumer IoT devices such as air purifiers, thermostats, baby monitoring devices, wake-up alarms and smart speakers.

Disruptive environmental sensor technology from Infineon

XENSIV™ PAS CO2 integrates on the PCB a photoacoustic transducer, including an acoustic detector, infrared source and optical filter; a microcontroller for signal processing and a MOSFET chip to drive the infrared source. The exceptional sensitivity of the acoustic detector coupled with the integrated PCB design reduce space requirements by more than 75 percent compared NDIR CO₂ sensors.

The PAS (photoacoustic spectroscopy) principle

The sensor is characterized by a disruptive measurement principle called PAS (photoacoustic spectroscopy). It works as follows: pulses of infrared light pass through an optical filter tuned to the CO₂ absorption wavelength. The CO₂ molecules absorb the filtered light, causing them to shake and generate a pressure wave with each pulse. This is called the photoacoustic effect. The sound is then detected by an acoustic detector optimized for low frequency operation and converted to a CO₂ concentration reading by the microcontroller.

Features and benefits

Key features	Key benefits
› Exceptionally small form factor (14 x 13.8 x 7.5 mm ³)	› Space savings in customers' end products
› High accuracy (±30 ppm ±3% of reading)	› High-quality data and compliance with smart building standards
› SMD package delivered in tape and reel	› Cost-effective high-volume assembly and easy system integration
› Advanced compensation and self-calibration algorithms	› Plug & play for fast design-to-market
› Various configuration options (e.g. sampling rate, baseline calibration) and interfaces (UART, I2C, PWM)	› Customer flexibility

Applications

- › HVAC (Heating, Ventilation and Air Conditioning) systems
- › Smart home appliances such as air purifiers, air conditioners and thermostats
- › Consumer devices for air quality monitoring such as personal assistants and CO₂ traffic lights
- › Smart indoor lighting

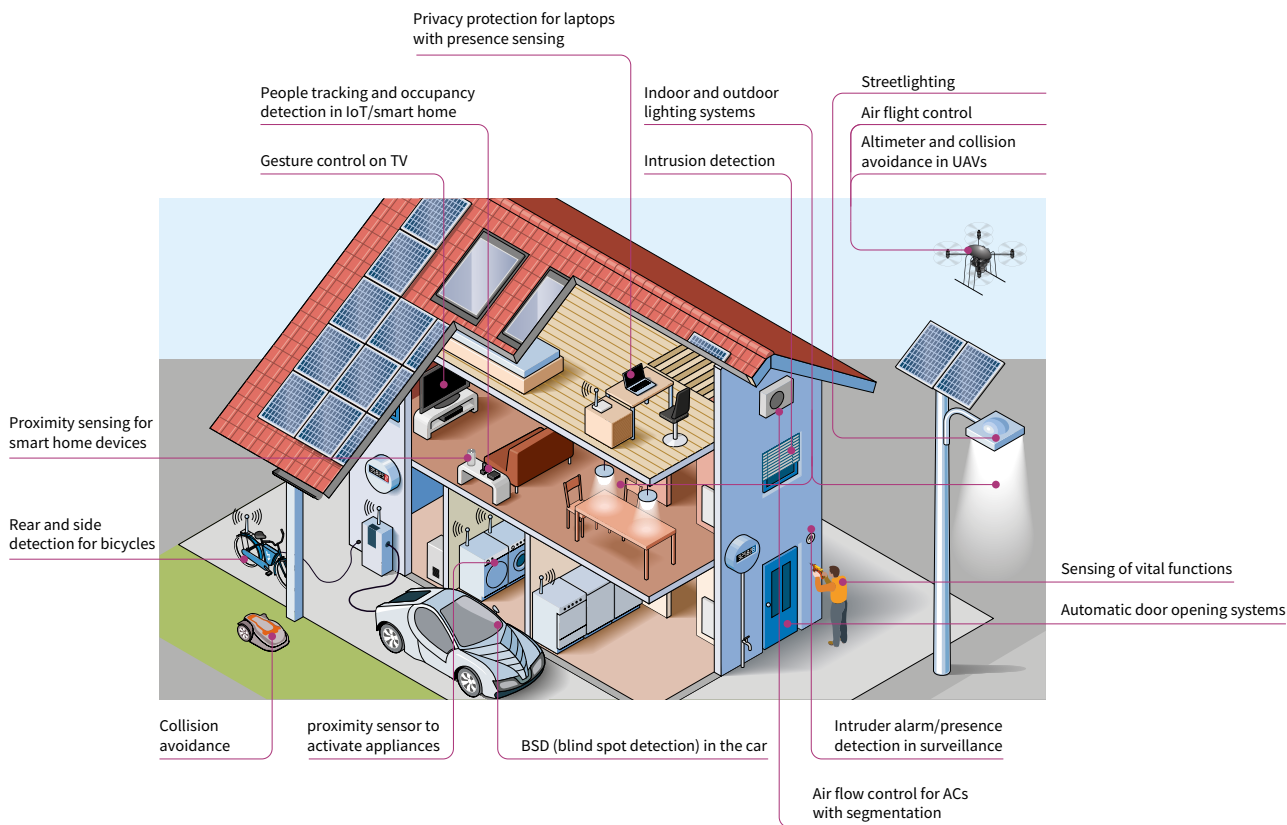

XENSIV™ radar sensors for consumer and IoT applications

As market leader in radar chips, we offer a wide portfolio of mmWave radar sensors as part of our XENSIV™ sensor family – including Doppler radar as well as FMCW radar systems. This portfolio includes the smallest 24 GHz MMIC in the market as well as the most integrated and largest 24 GHz radar transceiver family currently available. Those radar chips are designed to support different industrial, smart home, and consumer applications. In addition, we also offer radar sensors in the 60 GHz range, which are used in consumer products such as the Google Pixel 4 smartphone.

Motion detection with radar offers significant advantages over PIR and other motion-sensing technologies

With our 24 and 60 GHz radar sensors, we cover a wide range of applications. Many of them are based on motion detection triggering systems like lighting solutions, automatic doors, camera and security systems, or smart home devices. In contrast to other motion detection technologies like PIR, radar technology offers significant advantages. These include smaller system sizes, greater accuracy, and more precise measurements of detected objects. In addition, radar can also determine the direction of a moving object, speed of an object, distance, and depending on the antenna configuration, even the position of a moving object.

Applications for Infineon's radar sensors

Key benefits of radar sensing

- › Direction, proximity, and speed detection
- › Segmentation and tracking functionalities
- › Target positioning
- › Detection through non-conductive materials
 - Product design flexibility
 - Anonymous sensing
- › Maintains operation through harsh environmental conditions such as rain, snow, fog, dust, etc.
- › Sensitive enough to capture breathing and heartbeat
 - Radar can feel presence & vital functions
- › Radar performance parameters can be adjusted
 - Adaptable to different application requirements

Applications

New application or simple PIR replacement? Radar has it covered.

Radar, used in motion detection applications, increases accuracy when compared to passive infrared (PIR) technology, allowing more precise measurement of object detection, and providing new capabilities such as the detection of speed and the direction of moving objects. Radar is also superior to camera-based systems by allowing detection of the objects while keeping identities anonymous.

Example applications that can benefit from radar technology

Smart Home  Robust, discreet, small	Door opening  Direction of travel to remove false opening	Security  Privacy protection, and increased accuracy	Lighting  Indoor and outdoor Resistant to harsh weather	Monitors and laptops  Small, hidden, sensitive
Home appliances  Activate displays based on presence around	Air conditioners  Track people to move the airflow away from them	Smart speaker  Eliminate keyword based activation	TV  Safe energy & OLED lifetime by turning off	Gaming and VR  Enhance gaming experience
Gesture control  Additional gesture package available	Material detection  Object recognition and classification	Service robots  Robust, small footprint, accurate	Robotics  Safety, accuracy and efficiency	Vital sensing  Breathing & heart rate measurement

When to use 24 GHz or 60 GHz radar technology

In the 24 GHz range, the bandwidth for FMCW radar operations covers 250 MHz within the regulated ISM band. In the 60 GHz regime, an unlicensed ultra-wideband of up to 7 GHz can be used for short-range applications. Consequently, 60 GHz FMCW radar systems can offer a better resolution and therefore allow additional use cases such as human tracking and segmentation. Even gesture control, material classification, or the monitoring of various vital functions (respiration, heartbeat, or even blood pressure) is possible with radar technology due to micromotion detection.

XENSIV™ radar sensors for industrial and consumer applications

XENSIV™ 24 GHz radar sensor ICs

Infineon BGT24M/L family of MMIC chips

Infineon's range of 24 GHz industrial radar chips provides five configurations of transmit and receiver channels, ensuring that there is a chip to support your specific application. From basic applications such as motion detection in security systems, which only requires one transmit and one receive channel, to more complex applications like 3D positioning, which requires two or more receive channels, our range of radar chips supports all of your requirements.

Features	Infineon MMIC	Benefits
----------	---------------	----------

- > 24 GHz ISM band operation for motion, speed, direction movement and distance measurements
- > Five 24 GHz chips available
- > Highly integrated MMICs

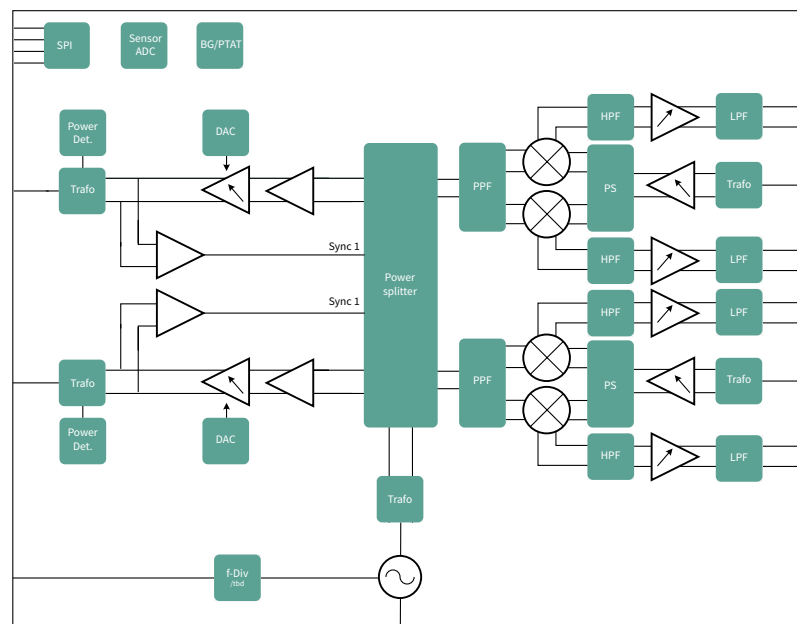

- > Long-range distance detection of moving objects up to 50 m
- > Wide range speed detection up to ±100 km/h
- > Low BOM costs

Product	Configuration	Features
BGT24MTR11	1Tx + 1Rx	<ul style="list-style-type: none"> > Measures, not just motion, but also speed, direction, and distance > Small form factor > Resistance to moisture, dirt, and temperature > Increased area coverage
BGT24MR2	2Rx	
BGT24MTR12	1Tx + 2Rx	<ul style="list-style-type: none"> > Discrete design > Low power MMICs for energy saving > Privacy protection > Adaptable to different application requirements > Highly integrated chips eliminating costly external components
BGT24LTR11	1Tx + 1Rx	
BGT24LTR22	2Tx + 2Rx	

The BGT24LTR22 key features

- > 24 GHz transceiver MMIC
- > Fully integrated low phase noise VCO
- > Integrated analog base band stage with programmable gain and filter settings
- > Bi-directional pin for synchronization
- > Built in temperature compensation circuit for VCO stabilization, no PLL needed
- > Low power consumption
- > Fully ESD protected device
- > Single ended RF and IF terminals
- > Single supply voltage 1.5 V

XENSIV™ 60 GHz radar sensor IC

Infineon's innovative XENSIV™ 60 GHz radar chip enables things to see and revolutionizes the human-machine interface.

BGT60LTR11AIP for consumer and IoT applications

The **BGT60LTR11AIP** is a fully integrated microwave motion sensor including Antennas in Package (AIP) as well as built-in detectors for motion and direction of motion. A state machine enables. In this autonomous mode, it detects a human target up to 5 m with a low power consumption of less than 5 mW. The **BGT60LTR11AIP** enables radar technology for everyone, since it does not require know-how in RF, antenna design, or radar signal processing. These features make the small-sized radar solution a compelling smart and cost-effective replacement for conventional PIR sensors in low power or battery-powered applications. Also, with its small form factor, Infineon's highly integrated radar sensor solutions bring innovative, intuitive sensing capabilities to many applications. Radar has been demonstrated to be a powerful sensor for short-range motion detection.

Block diagram of the BGT60LTR11AIP

Target application

- > Smart Building and Smart Home
- > Home appliances
- > Smart home security
- > Room air conditioners
- > Automated door openers
- > Smart entrance counter solution

Key features

- > 3.3 x 6.7 x 0.56 mm package size
- > 1Tx 1Rx Antennas in Package (AIP) with 80° field of view
- > Built-in motion detector
- > Built-in direction of motion detector
- > Multiple modes of operation incl. a completely autonomous mode
- > Adjustable performance parameters: detection sensitivity, hold time and frequency of operation
- > FR4 material for PCB design is sufficient

Key benefits

- > Autonomous mode:
 - Up to 5 m detection range
 - Less than 5 mW power consumption
 - Requires minimal external circuitry incl. crystal, LDO and some resistors capacitors

Adding a M0 MCU extends flexibility

- > Up to 10 m detection range (SPI mode)
- > Less than 2 mW power consumption possible

24 GHz modules

Partnering with the leading radar solution providers enables Infineon to connect our customers looking for turnkey solutions and design support for a complete range of applications. Utilizing our strong network of partners, the radar portfolio is extended to include a range of easy-to-integrate modules. Each of them contains Infineon's 24 GHz MMIC.

Features	Partner modules using Infineon chips	Benefits
<ul style="list-style-type: none"> Complete module, including radar MMIC, antenna options, MCU signal processing options, and SW options (Doppler, FSK and FMCW versions available) 	 <p>Module (RF module; RF module + MCU including SW)</p>	<ul style="list-style-type: none"> Ease of design Turnkey solution, no need for test and certification

By integrating Infineon's 24GHz MMIC chip into the partners easy-to-use and simple-to-integrate modules the complexity and time to market for a range of applications such as smart home automation, camera & security systems, air conditioners, UAVs, robotics, and smart lighting, are reduced.

Learn radar with Infineon on www.infineon.com/MakeRadar

For the first time, we bring radar to makers and developers. Here you can test, develop, and learn radar and its applications. At infineon.com/makeradar, you will see how simple it has become to work with ultrasmall radar sensors. The board and data will flow to your browser for testing, and this is not all, if you want to take the next step just take the available Arduino code examples and start your project.

Shield2Go

Infinion's Shield2Go boards offer a unique customer and evaluation experience – the boards are equipped with one Infineon IC and come with a ready-to-use Arduino library. Customers can now develop their own system solutions by combining 2GO boards together with Infineon MyIoT adapters. MyIoT adapters are gateways to external hardware solutions like Arduino and Raspberry PI, which are popular IoT hardware platforms. All this enables the fastest evaluation and development of the IoT system.

MyIoT – Adapter

MyIoT Adapter
Sales name: MYIOTADAPTERTOBO1
SP: SP002434972

Infinion's 2Go boards offer a unique customer and evaluation experience – the boards are equipped with one Infineon IC and come with a ready-to-use Arduino library. Customers can now develop their own system solutions by combining 2Go boards together with Infineon MyIoT adapters. MyIoT adapters are gateways to external hardware solutions like Arduino and Raspberry PI, which are popular IoT hardware platforms. All this enables the fastest evaluation and development of IoT system.

For more details on the product, click on the part number or contact our [product support](#).

Sensor 2GO kits

Infinion's XENSIV™ Sensor 2GO kits are budget-priced evaluation boards that are already equipped with a sensor combined with an Arm® Cortex®-M0 CPU. The Sensor 2GO kits provide a complete set of on-board

devices, including an on-board debugger. Build your own application and gadget with the Sensor 2GO kits. Our 2GO kits are ready-to-use plug-and-play boards.

Automotive Pressure Sensor 2GO kit

Product name: [KP215F1701-PS2GO-KIT](#)/[KP229E3518-PS2GO-KIT](#)/[KP236-PS2GO-KIT](#)/[KP254-PS2GO-KIT](#)/[KP275-PS2GO-KIT](#)

SP: SP002676652/SP002676656/ SP002676664/SP002676664/ SP002676648

Features

- > We offer three different derivatives
 - [KP215F1701](#) MAP: Analog Manifold Air Pressure Sensor
 - [KP229E3518](#) TurboMAP: Analog Turbo Manifold Air Pressure Sensor
 - [KP236](#) BAP: Analog Barometric Air Pressure
 - [KP254](#) dBAP: Digital Barometric Air Pressure (SPI)
 - [KP275](#) dMAP: Digital Manifold Air Pressure Sensor (SENT)
- > Pressure and external temperature measurement - ONLY KP275dMAP
- > CSV file can be generated for each derivative
- > External NTC included [KP275-PS2GO-KIT](#)
- > Configuration of different transfer functions possible, [KP215F1701-PS2GO-KIT](#) and [KP229E3518-PS2GO-KIT](#)
- > A pressure connector consisting of a fast connector for 6mm tubes, pressure couple, and sealing is included
- > GUI software for free download
- > Power over USB (micro USB), ESD and reverse current protection
- > GUI for free download

3D Magnetic Sensor 2GO kit

Product name: [TLE493D-A2B6 MS2GO](#)/[TLE493D-W2B6 MS2GO](#)/[TLV493D-A1B6 MS2GO](#)

SP: SP001707582/SP001707578/ SP001707574

Features

- > We offer three different derivatives
 - [TLE493D-A2B6](#) (three dimensional magnetic sensor)
 - [TLE493D-W2B6](#) (three dimensional magnetic sensor)
 - [TLV493D-A1B6](#) (three dimensional magnetic sensor)
- > XMC1100 (Arm® Cortex™-M0 based)
- > On-board J-Link Lite Debugger (Realized with XMC4200 Microcontroller)
- > Power over USB (Micro USB), ESD and reverse current protection
- > GUI for free download

TLI4971 Current Sensor 2GO kit

Product name: [TLI4971_MS2GO](#)

SP: SP00534547

Features

- > XENSIV™ magnetic current sensor TLI4971-A120T
- > Sensor board for high current capability (≤20 A)
- > Complete evaluation set including control and debug
- > First measurements possible within minutes

For more details on the product, click on the part number or contact our [product support](#).

Sensor 2GO kits

Speed Sensor 2GO kit
Product name: TLE4922 Speed-2-Go-Kit
SP: SP001624692
Features

- > Budget-priced evaluation board for speed sensing
- > Complete speed sensor incl. back-bias magnet, fixing and cable
- > TLE4922 (active mono cell Hall sensor)
- > XMC1100 (Arm® Cortex™-M0 based)
- > On-board J-Link Lite Debugger (realized with XMC4200 microcontroller)
- > Power over USB (Micro USB), ESD and reverse current protection
- > GUI based tool for real in-application evaluation for free download

Angle Sensor 2GO kit
Product name: [TLE5012B_E1000_MS2GO](#)/[TLI5012B_E1000_MS2GO](#)/[TLE5012B_E5000_MS2GO](#)/[TLE5012B_E9000_MS2GO](#)
SP: SP002133956/SP002133960/SP002133964/SP002133968
Features

- > Budget-priced evaluation board for angle and position sensing
- > We offer four derivatives:
 - [TLE5012B E1000](#) version: automotive predefined variant with SSC and IIF communication protocols
 - [TLE5012B E5000](#) version: automotive predefined variant with SSC and PWM communication protocols
 - [TLE5012B E9000](#) version: automotive predefined variant with SSC and SPC communication protocols
 - [TLI5012B E1000](#) version: industrial predefined variant with SSC and IIF communication protocols
- > TLE5012B/TLI5012B GMR digital angle sensor
- > XMC1100 (Arm® Cortex™-M0 based)
- > On-board J-Link Lite Debugger (realized with XMC4200 microcontroller)
- > The kit is compatible with the angle rotate knob for fast evaluation
- > GUI based tool for real in-application evaluation for free download

MEMS 2Go
Product name: [EVAL_IM69D130_FLEXKIT](#)
SP: SP002153022
 The flex evaluation kit allows simple and easy evaluation of XENSIV™ MEMS microphone [IM69D130](#). The flex board can be easily connected to audio testing setup. The evaluation kit includes five [IM69D130](#) mounted on flex board and one adapter board.
Features

- > Quick and easy evaluation of XENSIV™ MEMS microphones
- > Flex dimensions: 25 x 4.5 mm
- > Adapter dimensions: 20 x 15 mm

For more details on the product, click on the part number or contact our [product support](#).

Add ons for Sensor 2GO kits and Shield2Go

Joystick for all 3D Magnetic Sensor 2GO kits and Shield2Go

Product name: [JOYSTICK FOR 3D 2 GO KIT](#)

SP: SP001491834

Features

- > Easy mounting on all 3D magnetic sensor 2GO kits and Shield2Go
- > First magnetic joystick measurements within minute

Rotate knob for all 3D Magnetic Sensor 2GO kits, angle sensor 2GO kits and 3D magnetic sensor Shield2Go

Product name: [ROTATE KNOB 3D 2 GO KIT](#)

SP: SP001504602

Features

- > Easy mounting on all 3D magnetic and angle sensor 2GO kits as well as 3D magnetic sensor Shield2Go
- > Rotate knob with magnet as used in control elements and push buttons
- > Use cases 3D magnetic sensors: rotational and vertical movements of control elements and push buttons
- > Use cases angle sensors: simulates rotational movements for angle measurements

Linear slider for all 3D Magnetic Sensor 2GO kits and Shield2Go

Product name: [LINEAR-SLIDER 2GO](#)

SP: SP002043034

Features

- > Easy mounting on all 3D magnetic sensor 2GO kits and Shield2Go
- > First magnetic linear evaluations within minutes
- > Use case: linear movements
- > Linear slider with magnet – flexible setup: adaptable air-gaps, two different magnetic strengths/materials and distance limiters

Out of shaft adapter for all 3D Magnetic Sensor 2GO kits and Shield2Go

Product name: [OUT OF SHAFT FOR 3D 2 GO](#)

SP: SP003475178

Features

- > Easy mounting on all 3D magnetic sensor 2GO kits and Shield2Go
- > Use case: angle measurement in out of shaft configuration with 3D Hall sensor
- > Three different out of shaft configurations possible (x-z, y-z and x-y axis)
- > Magnetic rotation bar with ring magnet included

For more details on the product, click on the part number or contact our [product support](#).

Add ons for Sensor 2GO kits and Shield2Go

Linear control trigger for all 3D Magnetic Sensor 2GO Kits and Shield2Go
Product name: [POWER_DRILL2GO](#)
Features

- › Easy mounting on all 3D magnetic sensor 2GO Kits and Shield2Go
- › Use case: control trigger for e.g. power drill (linear position measurements with 3D Hall sensor)
- › Magnetic slider with magnet included

Human Machine Interface (HMI) direction indicator for all 3D Magnetic Sensor 2GO Kits and Shield2Go
Product name: [DIR_INDICATOR2GO](#)
Features

- › Easy mounting on all 3D magnetic sensor 2GO Kits and Shield2Go
- › Use case: human-machine interface (3x3 position matrix) for e.g. automotive direction indicator
- › Magnetic direction indicator with magnet included in handle bar

HMI mini control with 4 directions and 360° rotation for all 3D Magnetic Sensor 2GO Kits and Shield2Go
Product name: [MINI_CONTROL2GO](#)
Features

- › Easy mounting on all 3D magnetic sensor 2GO Kits and Shield2Go
- › Use case: left/right/forward and backward including 360° rotation at all positions
- › Control element includes magnet

OpenClose Adapter for Hall switch Shield2Go
Product name: [OPENCLOSE2GOHSTOBO1](#)
Features

- › Open & Close detection with magnet for positions detection
- › Presence and non-presence detection

For more details on the product, click on the part number or contact our [product support](#).

A world leader
in semiconductor solutions

Our vision

We are the link between the
real and the digital world.

Our values

We commit
We partner
We innovate
We perform

Our mission

We make life
easier, safer
and greener.

Part of your life. Part of tomorrow.

Applications

20-300 V MOSFETs

500-950 V MOSFETs

WBG semiconductors

Discrete IGBTs and
silicon power diodes

Power ICs

Intelligent switches
and input ICs

Gate-driver ICs

Microcontrollers

XENSIV™ sensors

The Infineon Partner Program

Together we win

Find solutions from our partners to accelerate your business of tomorrow. Infineon's global network of partners are experts in designing products, solutions or services leveraging Infineon components in 5 key areas: software, hardware, services, tools & end-applications.

The Infineon Partner Program is a global ecosystem of qualified companies, offering knowledge and experience to enable and implement Infineon products. Partners from the Infineon Partner Ecosystem help design your device and application based on our components. They have been selected by us on the basis of their competence and ability to design and deliver strong and trustworthy solutions, especially for new technologies and use cases. Their knowledge and experience spans areas as diverse as hardware, software, tools, services and target applications.

Hardware

Partners manufacturing electronic components, demo boards and turnkey modules

... jointly we create and commercialize value added solutions, while reaching new buyers

Software

Partners programming various types of software, algorithms and operating systems

... jointly we enhance our portfolio with complementary components and expand technology know how

Tools

Partners designing computer programs for the development of embedded systems

... jointly we enable a complete and immersive development experience for customers

Services

Partners providing cloud and engineering services, application support or trainings

... jointly we build up engineering capabilities and offer it to a world class customer network

End Application

Partners creating end products and related applications

... jointly we provide customers with state of the art solutions and innovative use cases

Find out more information about the partner program and the latest news around our partners at [Infineon Partner Ecosystem Website](#) .

Looking for specific partner solution in your region? Our Partner Finder provides an overview of our partners and their offerings. Simply specify your search in the dropdown menu and browse through the texts, company logo, and partner signet to navigate directly to the respective website for further information.

Further information about Infineon partner solutions, you can also find under the "partner tab" on the [product](#) and [application](#) pages .
