

## Performance Demonstration Kit for the ADS131E08

**Figure 1. ADS131E08EVM-PDK**

This user's guide describes the characteristics, operation, and use of the ADS131E08EVM-PDK. This performance demonstration kit is an evaluation module for the ADS131E08, an eight-channel, 24-bit, low-power, integrated analog front-end (AFE) designed for power protection circuits. The ADS131E08EVM-PDK is intended for prototyping and evaluation. This user's guide includes a complete circuit description, schematic diagram, and bill of materials.

Throughout this document, the terms ADS131E08EVM-PDK, demonstration kit, evaluation board, evaluation module, and EVM are synonymous with the ADS131E08EVM.

The following related documents are available through the Texas Instruments web site at [www.ti.com](http://www.ti.com).

## 1 ADS131E08EVM Overview

### 1.1 Information about Cautions

This document contains caution statements. The information in a caution statement is provided for your protection. Be sure to read each caution carefully.

#### CAUTION

This is an example of a caution statement. A caution statement describes a situation that could potentially damage your software or equipment.

### 1.2 Introduction

The ADS131E08EVM-PDK is intended for evaluating the ADS131E08 low-power, 24-bit, simultaneously-sampling, eight-channel analog-to-digital converter (ADC). The digital SPI™ control interface is provided by the MMB0 modular EVM motherboard that connects to the ADS131E08 evaluation board. The ADS131E08EVM-PDK is designed to expedite evaluation and system development.

The MMB0 motherboard allows the ADS131E08EVM to be connected to the computer through an available USB port. This manual shows how to use the MMB0 as part of the ADS131E08EVM-PDK, but does not provide technical details about the MMB0.

### 1.3 Supported Features

#### Hardware Features:

- Configurable for bipolar or unipolar supply operation
- Configurable for internal and external clock through jumper settings
- Analog test signals can be applied easily using screw terminals

#### Software Features:

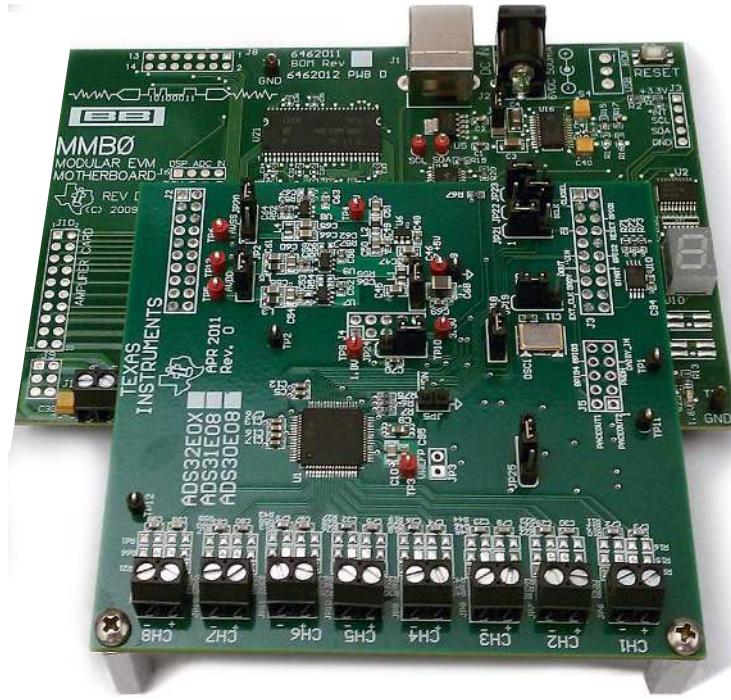

- Analysis tools, including a virtual oscilloscope, histogram, and fast Fourier transform (FFT)
- Access to a variety of register contents, including data rate, PGA options, and more.
- Set ADS131E08 register settings with easy-to-use, graphical user interface (GUI) software

#### 1.3.1 Features Not Supported in Current Version

32 kSPS and 64 kSPS data capture is *not* supported by the current version of the firmware.

## 1.4 ADS131E08EVM Hardware

Figure 2 shows the hardware included in the ADS131E08EVM kit. Contact the factory at <http://e2e.ti.com> if any component is missing. Also, it is highly recommended that you check the TI website at <http://www.ti.com> to verify that you have the latest software.

**Figure 2. ADS131E08EVM-PDK Kit**

The complete kit includes the following items:

- ADS131E08EVM printed-circuit board (PCB)
  - MMB0 (modular EVM motherboard)

An external power supply is required to power the MMB0 board. Any supply used to power the MMB0 board through the jack located at J2 must comply with the following requirements:

- Output voltage: 5.5 VDC to 15 VDC
  - Maximum output current:  $\geq 500$  mA
  - Output connector: barrel plug (positive center), 2.5-mm I.D. x 5.5-mm O.D. (9-mm insertion depth)
  - Complies with applicable regional safety standards

## 2 Software Installation

### 2.1 Minimum Requirements

Before installing the software that is intended for use with the EVM kit, please verify that your PC-compatible computer meets the following minimum requirements:

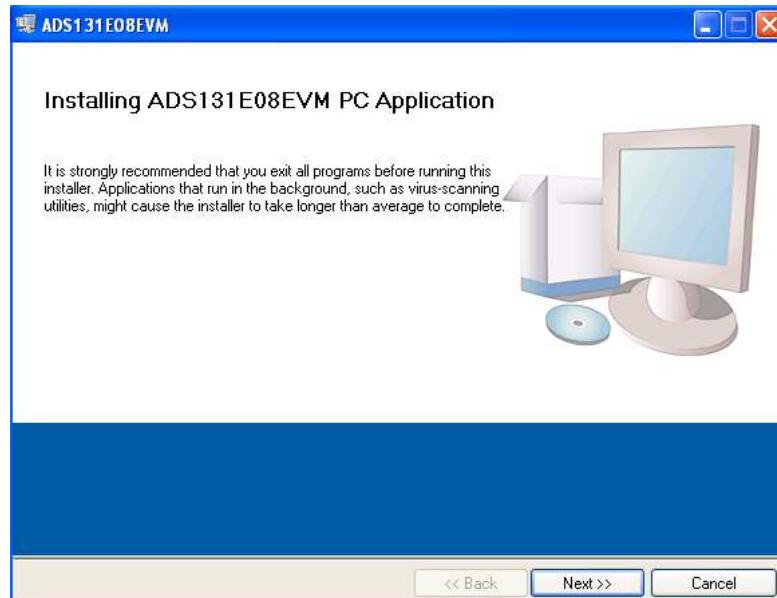

- Pentium III® or Celeron® processor, 866 MHz or equivalent
- Minimum 256 MB of RAM (512 MB or greater recommended)
- USB 1.1-compatible input
- Hard disk drive with at least 200 MB free space
- Microsoft® Windows® XP operating system with SP2, or Windows 7 operating system
- Mouse or other pointing device
- 1280 × 960 minimum display resolution

## 2.2 Installing the Software

### CAUTION

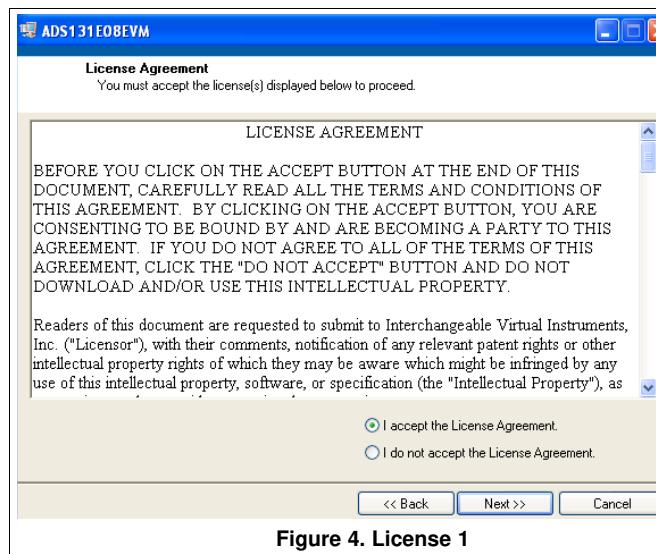

Do not connect the ADS131E08EVM hardware before installing the software on a suitable PC. Failure to observe this caution may cause Microsoft Windows to not recognize the ADS131E08EVM.

Download the latest software from the TI website at [www.ti.com/tool/ADS131E08EVM-PDK](http://www.ti.com/tool/ADS131E08EVM-PDK). To install the ADS131E08 software, unzip and run *setup.exe*. Figure 3 shows the initialization screen.

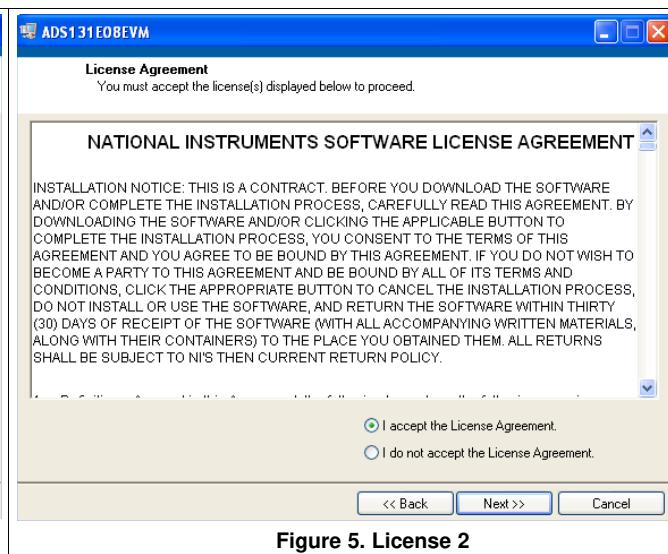

**Figure 3. Initialization of ADS131E08EVM GUI**

You must accept the two license agreements shown in Figure 4 and Figure 5 before the installation can proceed.

**Figure 4. License 1**

**Figure 5. License 2**

## 2.3 Installing the ADS131E08EVM-PDK Hardware Drivers

### 2.3.1 Installing the First USB Driver

Apply power to the MMB0 using a power supply as discussed in [Section 1.4](#) and connect the MMB0 to your PC through any available USB port. The *Found New Hardware Wizard* window appears, as shown in [Figure 6](#). Note that this is the first of two USB drivers that are installed. Click *Next* to continue driver installation.

Figure 6. New Hardware Wizard Screen 1

Click *Next* when the screen in [Figure 7](#) appears.

Figure 7. New Hardware Wizard Screen 2

Navigate to *C:\Program Files\ADS131E08EVM\USB Driver*, as shown in [Figure 8](#).

**Figure 8. New Hardware Wizard Screen 3**

Click *Next* to find and install the driver. When the wizard is complete, the screen in [Figure 9](#) appears.

**Figure 9. Completion of the First USB Driver**

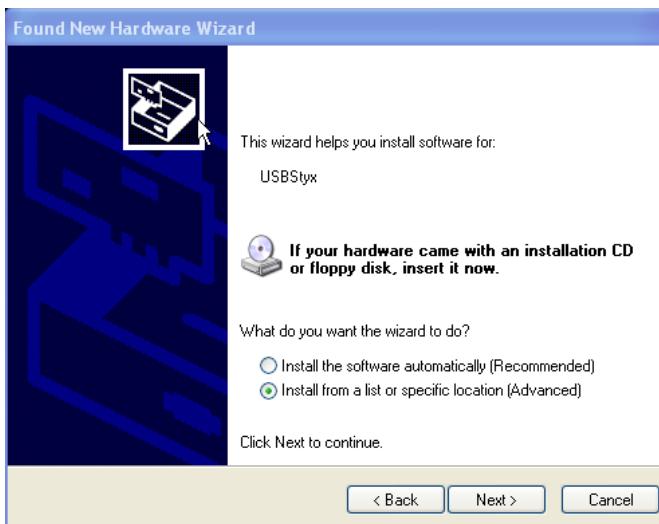

### 2.3.2 Installing the Second USB Driver

Launch the ADS131E08EVM-PDK software from the program menu. The software loads and begins downloading firmware to the processor on the MMB0. After the firmware is loaded and running, the *Found New Hardware Wizard* starts again, as shown in [Figure 10](#).

**Figure 10. Second New Hardware Wizard Screen**

Click *Next* and the screen in [Figure 11](#) appears.

**Figure 11. Installing the USBStyx Driver**

Click *Next* to complete the installation. If the computer is unable to find the USBStyx driver, point to the installation directory of *C:\Program Files\ADS131E08EVM\USB Drivers*.

At this time, you may receive an error message because the ADS131E08EVM-PDK software has timed out. If so, click *OK*, close the GUI program, power cycle the ADS131E08EVM, and restart the newly installed ADS131E08 evaluation program. This process may need to be repeated if you plug the ADS131E08EVM-PDK into a different USB port on your computer.

### 3 ADS131E08EVM Daughter-Card Hardware Overview

#### CAUTION

Many of the components on the ADS131E08EVM are susceptible to damage by electrostatic discharge (ESD). Customers are advised to observe proper ESD handling procedures when unpacking and handling the EVM, including the use of a grounded wrist strap, bootstraps, or mats at an approved ESD workstation. An electrostatic smock and safety glasses should also be worn.

The ADS131E08EVM-PDK board is a four-layer circuit board. The board layout and schematics are appended to the end of this document.

The ADS131E08EVM-PDK is configured to be used with the TI MMB0 data converter evaluation platform. The key features of the ADS131E08 system on a chip (SOC) are:

- Eight integrated instrumentation amplifiers (INAs) and eight, 24-bit, high-resolution ADCs
- Low power consumption
- Data rates of 1 kSPS, 2 kSPS, 4 kSPS, 8 kSPS, 16 kSPS, 32 kSPS, and 64 kSPS (NOTE: 32 kSPS and 64 kSPS data capture is **not** supported by the current version of the firmware).
- 3-V to 5-V unipolar or bipolar analog supply, and 1.8-V to 3-V digital supply
- SPI data interface

The following sections explain some of the hardware settings possible with the EVM for evaluating the ADS131E08 under various test conditions.

#### 3.1 Power Supply

The ADS131E08EVM mounts on the MMB0 board with connectors J1, J2, and J3. The main power supplies (+5 V, +3 V, and +1.8 V) for the front-end board are supplied by the host MMB0 board through connector J3. All other power supplies required for the front-end board are generated onboard by power management devices.

The ADS131E08 operates in unipolar mode using a +3.0-V to +5.0-V analog supply (AVDD/AVSS) and a +1.8-V to +3.3-V digital supply (DVDD), or in bipolar mode using the onboard analog supply ( $\pm 1.5$  V to  $\pm 2.5$  V). The power consumption of the front-end board is measured by using the JP3 jumper. Power down the ADS131E08 by shorting jumper JP4.

Test points TP4, TP5, TP6, TP7, TP8, TP9, TP10, and TP13 are provided to verify that the host power supplies are correct. The corresponding voltages are shown in [Table 2](#).

**Table 2. Power-Supply Test Points**

Test Point	Voltage
TP7	+5.0 V
TP4	-4.96 V
TP9	+1.8 V
TP10	+3.3 V
TP5	+3.0 V
TP13	+2.5 V
TP6	-2.5 V
TP8	GND

The front-end board must be properly configured in order to achieve the various power-supply schemes. The default power-supply setting for the ADS131E08EVM is a bipolar analog supply of  $\pm 2.5$  V, and there are onboard options to switch to a unipolar analog supply of +3 V. The digital supply (DVDD) is selectable to either +3.3 V or +1.8 V. [Table 3](#) shows the board and component configurations for each analog power-supply scheme. [Table 4](#) shows the board configurations for the digital supply. Note that the EVM is shipped with the analog supply set to  $\pm 2.5$  V and digital supplies set to 3.3 V.

**Table 3. Analog Supply Configurations**

<b>AVDD and AVSS</b>	<b>Unipolar Analog Supply</b>		<b>Bipolar Analog Supply</b>	
	<b>3 V</b>	<b>5 V</b>	<b><math>\pm 1.5</math> V</b>	<b><math>\pm 2.5</math> V</b>
JP7	1-2	1-2	2-3	2-3
JP1	2-3	2-3	1-2	1-2
U6	TPS73230	TPS73250	Don't care	Don't care
U8	Don't care	Don't care	TPS73201	TPS73201
U7	Don't care	Don't care	TPS72301	TPS72301
R61	Don't care	Don't care	21 k $\Omega$	47.5 k $\Omega$
R62	Don't care	Don't care	78.7 k $\Omega$	43.2 k $\Omega$
R59	Don't care	Don't care	23.3 k $\Omega$	49.9 k $\Omega$
R60	Don't care	Don't care	95.3 k $\Omega$	46.4 k $\Omega$
C48, C54, C59	Not installed	Not installed	Not installed	Not installed

**Table 4. Digital Supply Configurations (DVDD and DGND)**

<b>DVDD</b>	<b>3.3 V</b>	<b>1.8 V</b>
JP11	2-3	1-2

### 3.2 Clock

The ADS131E08 has an on-chip oscillator circuit that generates a 2.048-MHz clock (nominal). This clock can vary by  $\pm 5\%$  over temperature. For applications that require higher accuracy, the ADS131E08 can also accept an external clock signal. The ADS131E08 provides an option to test both internal and external clock configurations. It also provides an option to generate the external clock from either the onboard oscillator or from an external clock source.

The onboard oscillator is powered by the DVDD supply of the ADS131E08. Care must be taken to ensure that the external oscillator can operate either with +1.8 V or +3.3 V, depending on the DVDD supply configuration. [Table 5](#) shows the jumper settings for the three options for the ADS131E08 clocks.

**Table 5. CLK Jumper Options**

ADS131E08 Clock	Internal Clock	External OSC Clock	External Clock
JP5	Not installed	2-3	1-2
JP6	Don't care	1-2 (disable)	Don't care
J4 - pin 10	Don't care	Don't care	Clock source

A 2.048-MHz oscillator available for the +3.3-V DVDD supply is the FXO-HC735-2.048MHz. For a +1.8-V DVDD supply, use the SiT8002AC-34-18E-2.048. The EVM is shipped with the external oscillator enabled.

### 3.3 Reference

The ADS131E08 has an on-chip internal reference circuit that provides reference voltages to the device. Alternatively, the internal reference can be powered down and VREFP can be applied externally. This configuration is achieved with the external reference generators (U2 and U3) and driver buffer. These components (U2, U3, and U4) must be installed by the user; they are not installed at the factory. The external reference voltage can be set to either 4.096 V or 2.5 V, depending on the analog supply voltage. Measure TP3 to make sure the external reference is correct and stable. The settings for the external reference is described in [Table 6](#). This table assumes [REF5025](#) is installed at U2 and [REF5040](#) at U3. A low-noise amplifier like the [OPA350](#) can be installed at U4.

**Table 6. External Reference Jumper Options**

ADS131E08 Reference	Internal Reference	External Reference	
	VREF = 2.5 V	VREF = 4.096 V	VREF = 2.5 V
JP12	Don't care	2-3	1-2
JP2	Not installed	Installed	Installed

#### 3.3.1 Accessing ADS131E08 Analog Supplies

Some ADS131E08 output signals are provided as test points for probing purposes using J4 (not installed on the board). [Table 7](#) lists the various test signals with the corresponding test points.

**Table 7. Auxiliary Connector Test Signals and Test Points**

Signal	J4 Pin Number		Signal
Not connected	1	2	GPIO1
Not connected	3	4	GPIO2
PWDN	5	6	GPIO3
Dasiy in	7	8	GPIO4
AGND	9	10	Not connected

### **3.3.2 Accessing ADS131E08 Digital Supplies**

The ADS131E08 digital signals (including SPI signals, some GPIO signals, and some control signals) are available at connector J1. These signals are used to interface to the MMB0 board DSP. The pinout for this connector is shown in [Table 8](#).

**Table 8. Serial Interface Pinout**

Signal	J1 Pin Number		Signal
START/CS	1	2	CLKSEL
CLK	3	4	GND
NC	5	6	GPIO1
CS	7	8	RESET
NC	9	10	GND
DIN	11	12	GPIO2
DOUT	13	14	NC/START
DRDY	15	16	SCL
EXT_CLK	17	18	GND
NC	19	20	SDA

### **3.4 Analog Inputs**

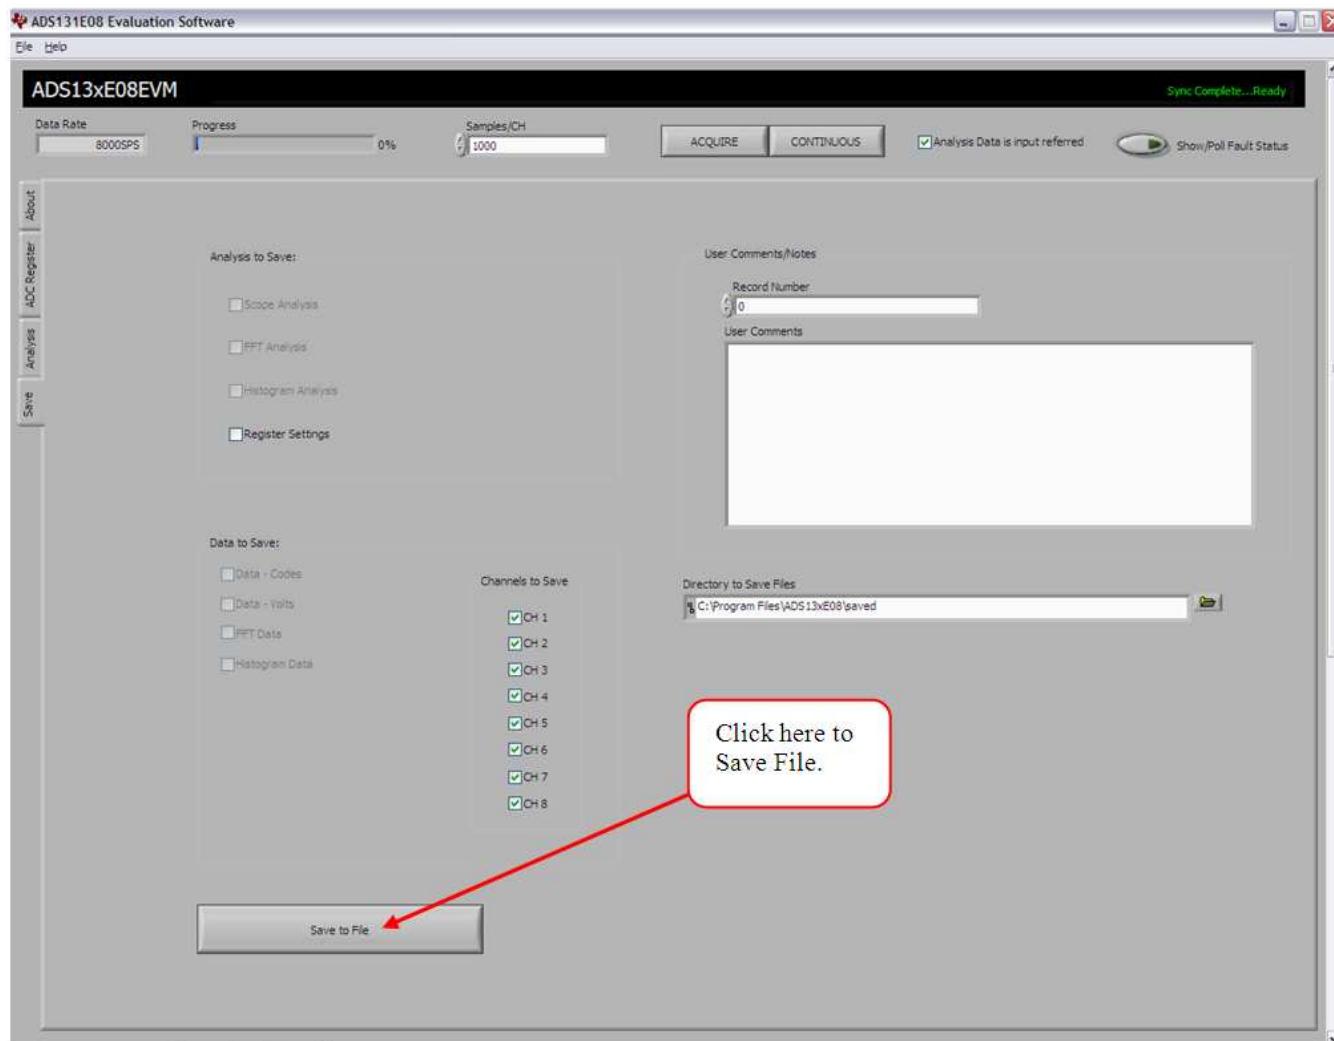

The ADS131E08 provides users the option to feed in signals from any arbitrary signal source directly. Analog signals can be applied at terminal blocks J5 through J12.

## 4 Using the Software

The software GUI contains a *Save to File* feature (located in the *Save* tab) that allows all data from any combination of channels, along with notes to describe the data, to be saved to a specified directory. This data can then be read back using a text editor. Saving the data in this format can be completed by clicking the *Save to File* button, as shown in [Figure 12](#).

An additional option in the evaluation software allows register configurations to be saved to a file that can be reloaded to the GUI. To create a configuration file with all of the stored register settings, use the *Save Configuration Settings* option, found in the *File* menu at the top left-hand corner of the GUI. This configuration file can be reloaded to the GUI using the *Load Configuration Settings* option found in the same *File* menu.

[Figure 12](#) shows the options available in the *Save* tab.

**Figure 12. File Save Option Under Save Tab**

## 4.1 Software Overview

This section provides a quick overview of the various features and functions of the ADS131E08EVM software package.

There are four tabs across the left side of the GUI; from top to bottom, they are:

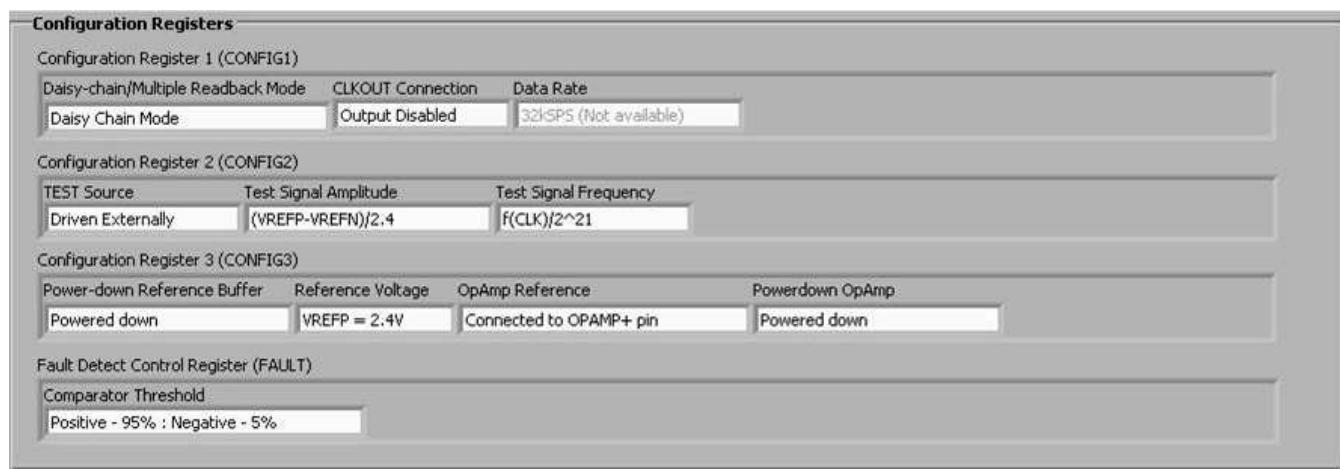

- **About:** Provides information about the EVM and software version revisions.
- **ADC Register:** Includes all of the control registers for the ADS131E08 in a series of related subtabs:
  - Channel Registers
  - GPIO
  - Register Map
- **Analysis:** Provides different ways to analyze captured data, in the time or frequency domain, using the following subtabs:
  - Scope
  - Histogram
  - FFT
- **Save:** Provides options for saving acquired data

## 4.2 Global Channel Registers

The *Channel Registers* tab provides access to the ADS131E08 configuration and fault threshold registers. The Global Channel Registers tab has the following options:

- **Configuration Register 1:** Controls daisy-chain and multiple readback (MRB) modes, the CLKOUT connection, and the output data rate. Note that the 32 kSPS and 64 kSPS data rates provide 16-bit data (*not* supported by the current version of the firmware), and the 1 kSPS, 2 kSPS, 4 kSPS, 8 kSPS, and 16 kSPS data rates are 24 bits wide.
- **Configuration Register 2:** Controls the internal test source, along with the test-signal amplitude and frequency.
- **Configuration Register 3:** Controls the reference buffer power-down control, the reference voltage, and the op amp buffer control.
- **Fault Control Register:** Sets the comparator threshold level for fault.

Figure 13 shows the GUI panel to manipulate these registers and the respective settings for each.

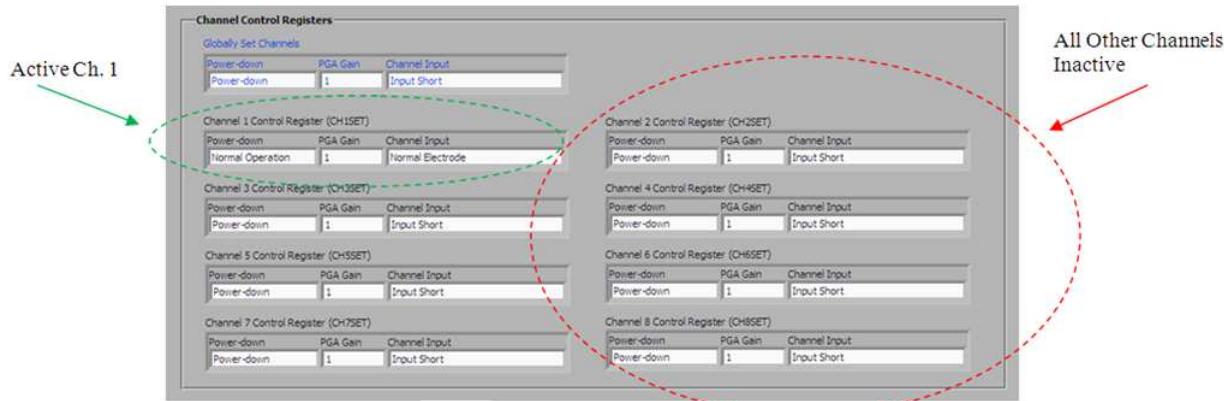

**Figure 13. Channel Registers GUI for the Configuration Registers**

### 4.3 Channel Control Registers

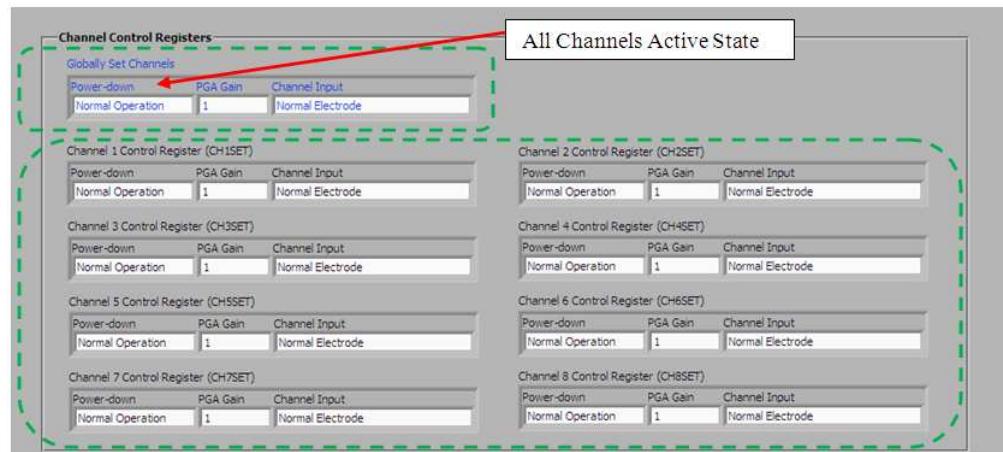

The second section under the Channel Registers tab is the Channel Control Registers box. This panel allows the user to uniquely configure the front-end multiplexer (mux) for each channel. Additionally, at the top of the Channel Control Registers box is the option to globally set all channels to the same setting. Table 9 lists the register map. The channel-specific mux is illustrated in Figure 14, and the all-channel-specific mux is shown in Figure 15.

**Table 9. Register Assignments: Channel-Specific Settings**

Address	Register	Reset Value	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
<b>Channel-Specific Settings</b>										
05	CH1SET	00	PD1	GAIN12	GAIN11	GAIN10	0	MUXn2	MUXn1	MUXn0
06	CH2SET	0	PD2	GAIN22	GAIN21	GAIN20	0	MUX22	MUX21	MUX20
07	CH3SET	0	PD3	GAIN32	GAIN31	GAIN30	0	MUX32	MUX31	MUX30
08	CH4SET	0	PD4	GAIN42	GAIN41	GAIN40	0	MUX42	MUX41	MUX40
09	CH5SET	0	PD5	GAIN52	GAIN51	GAIN50	0	MUX52	MUX51	MUX50
0A	CH6SET	0	PD6	GAIN62	GAIN61	GAIN60	0	MUX62	MUX61	MUX60
0B	CH7SET	0	PD7	GAIN72	GAIN71	GAIN70	0	MUX72	MUX71	MUX70
0C	CH8SET	0	PD8	GAIN82	GAIN81	GAIN80	0	MUX82	MUX81	MUX80

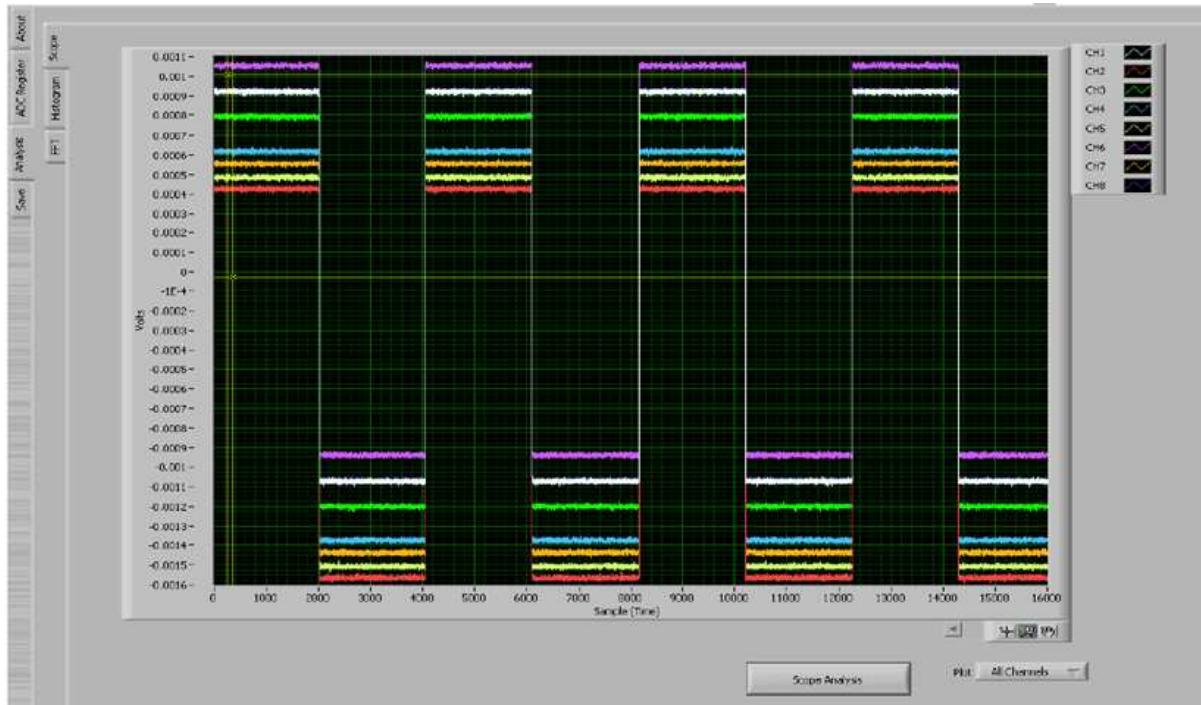

**Figure 14. Channel Control Register GUI Panel: Single Channel Enabled**

**Figure 15. Channel Control Registers GUI Panel: All Channels Enabled**

#### **4.4 Internal Test Signals Input and the Scope Display Tab**

Configuration Register 2 controls the signal amplitude and frequency of an internally-generated square wave test signal. The primary purpose of this test signal is to verify the functionality of the front-end mux, the programmable gain amplifier (PGA), and the ADC. The test signals may be viewed on the Analysis→Scope Display tab, as Figure 16 shows.

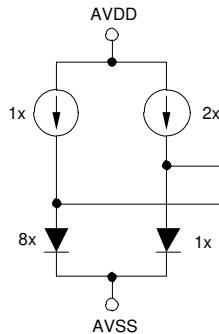

**Figure 16. Example of Internal Test Signals Viewed on the Scope Display Tab**

## 4.5 Temperature Sensor and the Scope Display Tab

The internal temperature sensor on the ADS131E08 is shown in Figure 22.

Temperature Sensor Monitor

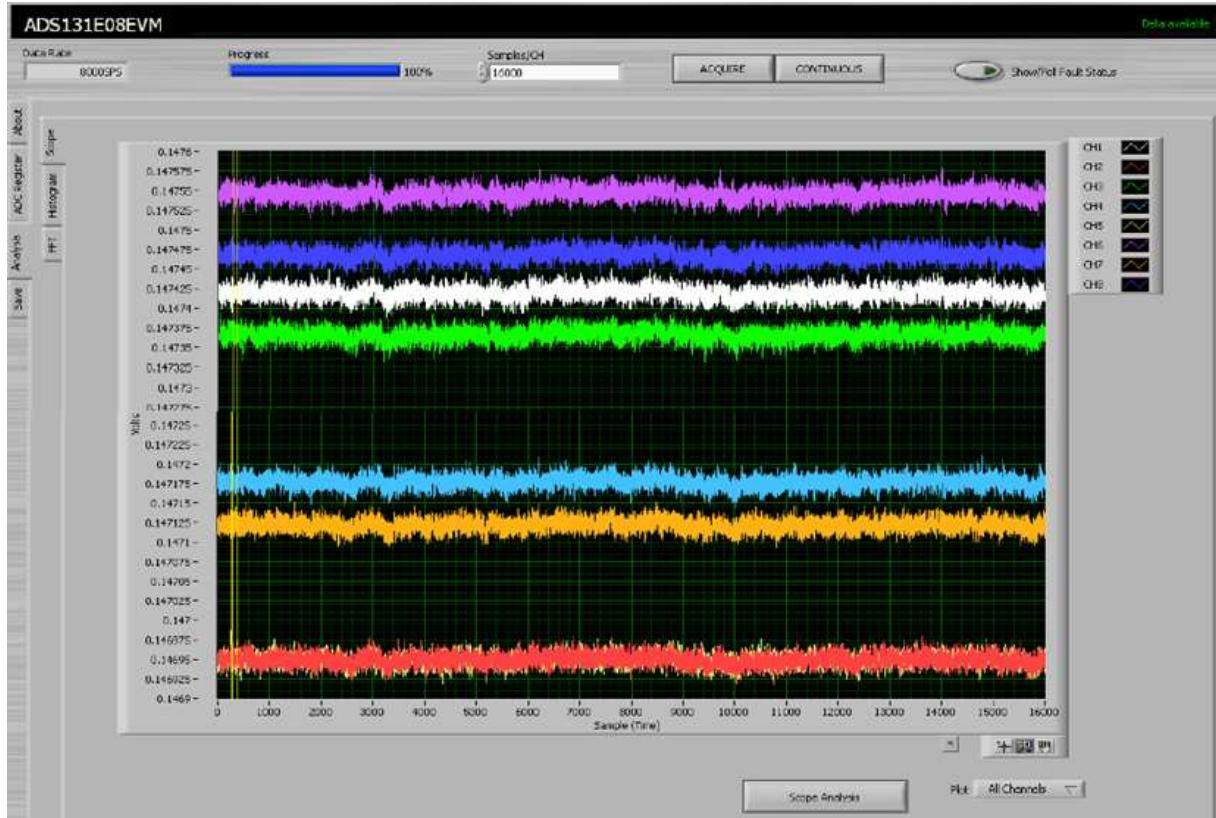

**Figure 17. Internal Temperature Sensor**

When the internal mux is routed to the temperature sensor input, the output voltage of the ADC may be converted to a temperature value using [Equation 1](#):

$$\text{Temperature } (\text{°C}) = \left[ \frac{\text{Temperature Readng } (\mu\text{V}) - 145,300 \mu\text{V}}{490 \mu\text{V/}^{\circ}\text{C}} \right] + 25^{\circ}\text{C} \quad (1)$$

The output voltage corresponding to a given temperature can be read by running a data acquisition after the *Temperature Sensor* mux option is selected, as shown in the [Channel Control Registers](#) section. [Figure 18](#) demonstrates an example of temperature sensor readings read back using the GUI.

**Figure 18. Eight-Channel Read of Internal Temperature Data**

The number 0.1447 V (on the y-axis) can be calculated as a temperature using [Equation 2](#):

$$\text{Temperature } (^{\circ}\text{C}) = \left( \frac{0.1447 - 0.145300}{0.00049} \right) + 25 = 23.78^{\circ}\text{C}$$
(2)

#### 4.5.1 MV<sub>DD</sub> Input and the Scope Tab

The MV<sub>DD</sub> input option allows the measurement of the supply voltage V<sub>S</sub> = (AVDD + AVSS) / 2 for channels 1, 2, 5, 6, 7, and 8; however, the supply voltage for channel 3 is DVDD / 2.

### 4.6 General-Purpose I/O Register (GPIO)

The GPIO registers control four general-purpose input and output (I/O) pins. [Table 10](#) shows the respective register to control these pins. [Figure 19](#) illustrates the GPIO Control Register GUI panel.

**Table 10. GPIO: General-Purpose I/O Register**

Address	Register	Reset Value	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
14h	GPIO	0Fh	GPIOD4	GPIOD3	GPIOD2	GPIOD1	GPIOC4	GPIOC3	GPIOC2	GPIOC1

**Figure 19. GPIO Control Register GUI Panel**

#### 4.7 Fault Status Registers (*FAULT\_STATP* and *FAULT\_STAIN*)

The Fault Status registers store the status of whether the positive and/or negative input on each channel has a fault. This is a convenient feature to help pinpoint if any of the inputs are out of range. The GUI for this feature is enabled by clicking in the upper right-hand corner of the EVM software on the *Show/Poll Fault Status* button, as shown in Figure 20.

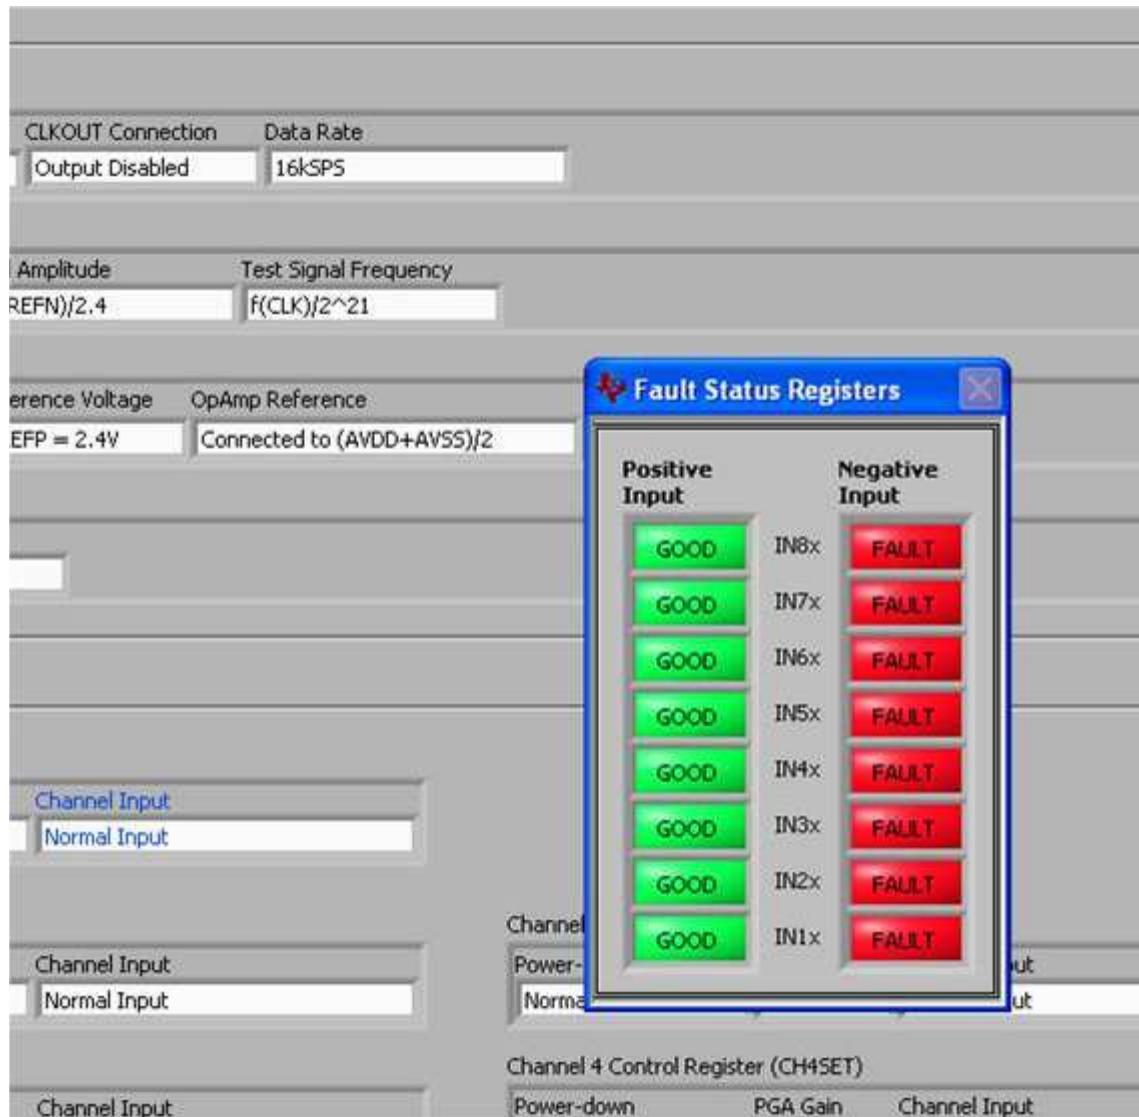

Figure 20. Fault Status Indicator

#### 4.8 Register Map

The *Register→Device Register* tab is a helpful debug feature that allows the user to view the state of all the internal registers. This tab is shown in [Figure 21](#).

Device Registers

Figure 21. Device Register Settings

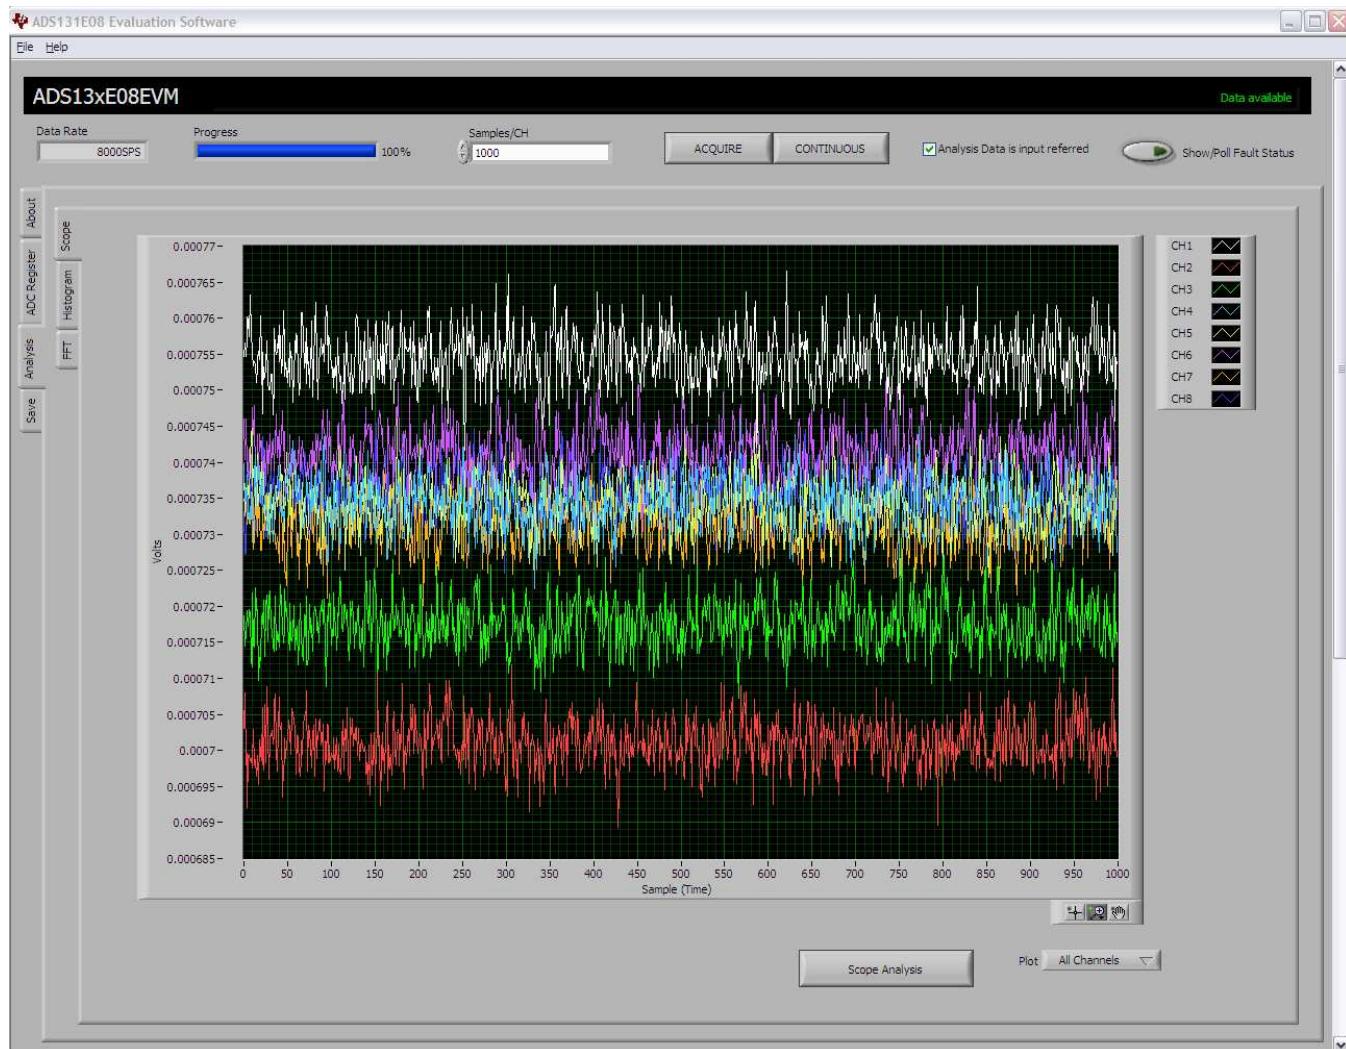

## 5 ADS131E08 Analysis Tools

Under the *Analysis* tab in the ADS131E08 GUI software, there are three different analysis tools available that enable a detailed examination of the signals selected by the front-end mux:

- Scope
- Histogram
- FFT

### 5.1 Scope Tool

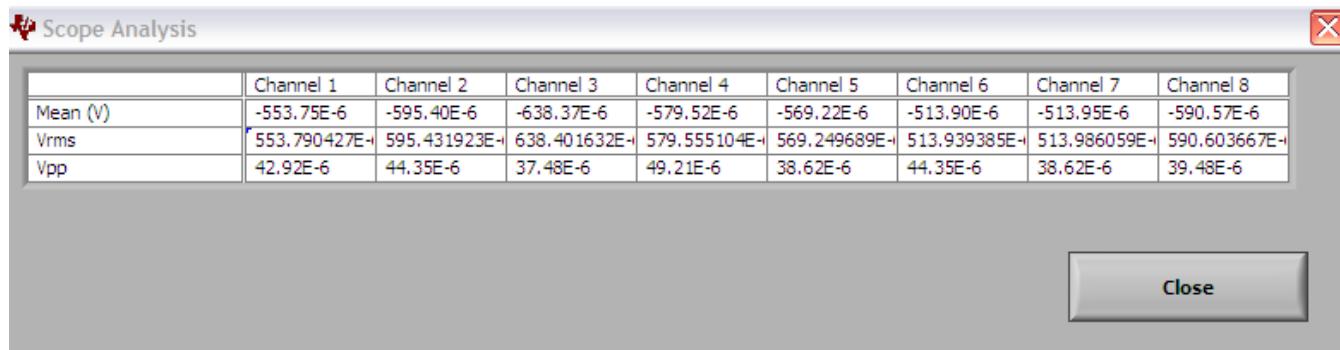

The *Scope* tool, available under the *Analysis* tab, is a very useful means of examining the data results in the time domain. Users can decide if they would like their data displayed as input-referred or not, as well as review the details of the converted data to ensure that the data meets expectations. [Figure 22](#) shows the scope tool features.

**Figure 22. Scope Tool Features**

### 5.1.1 Scope Analysis Button

The *Scope Analysis* button opens a pop-up window that displays the mean voltage, root mean square (RMS) voltage, and peak-to-peak voltage for noise analysis. [Figure 23](#) shows an example of this window.

The screenshot shows a table titled "Scope Analysis" with a header row for "Channel". Below the header are three rows of data: Mean (V), Vrms, and Vpp. The columns represent Channel 1 through Channel 8. The data values are as follows:

	Channel 1	Channel 2	Channel 3	Channel 4	Channel 5	Channel 6	Channel 7	Channel 8
Mean (V)	-553.75E-6	-595.40E-6	-638.37E-6	-579.52E-6	-569.22E-6	-513.90E-6	-513.95E-6	-590.57E-6
Vrms	553.790427E-6	595.431923E-6	638.401632E-6	579.555104E-6	569.249689E-6	513.939385E-6	513.986059E-6	590.603667E-6
Vpp	42.92E-6	44.35E-6	37.48E-6	49.21E-6	38.62E-6	44.35E-6	38.62E-6	39.48E-6

A "Close" button is located in the bottom right corner of the window.

**Figure 23. Scope Analysis Tab (Noise Levels for Each Channel Shown)**

### 5.1.2 Waveform Examination Tool

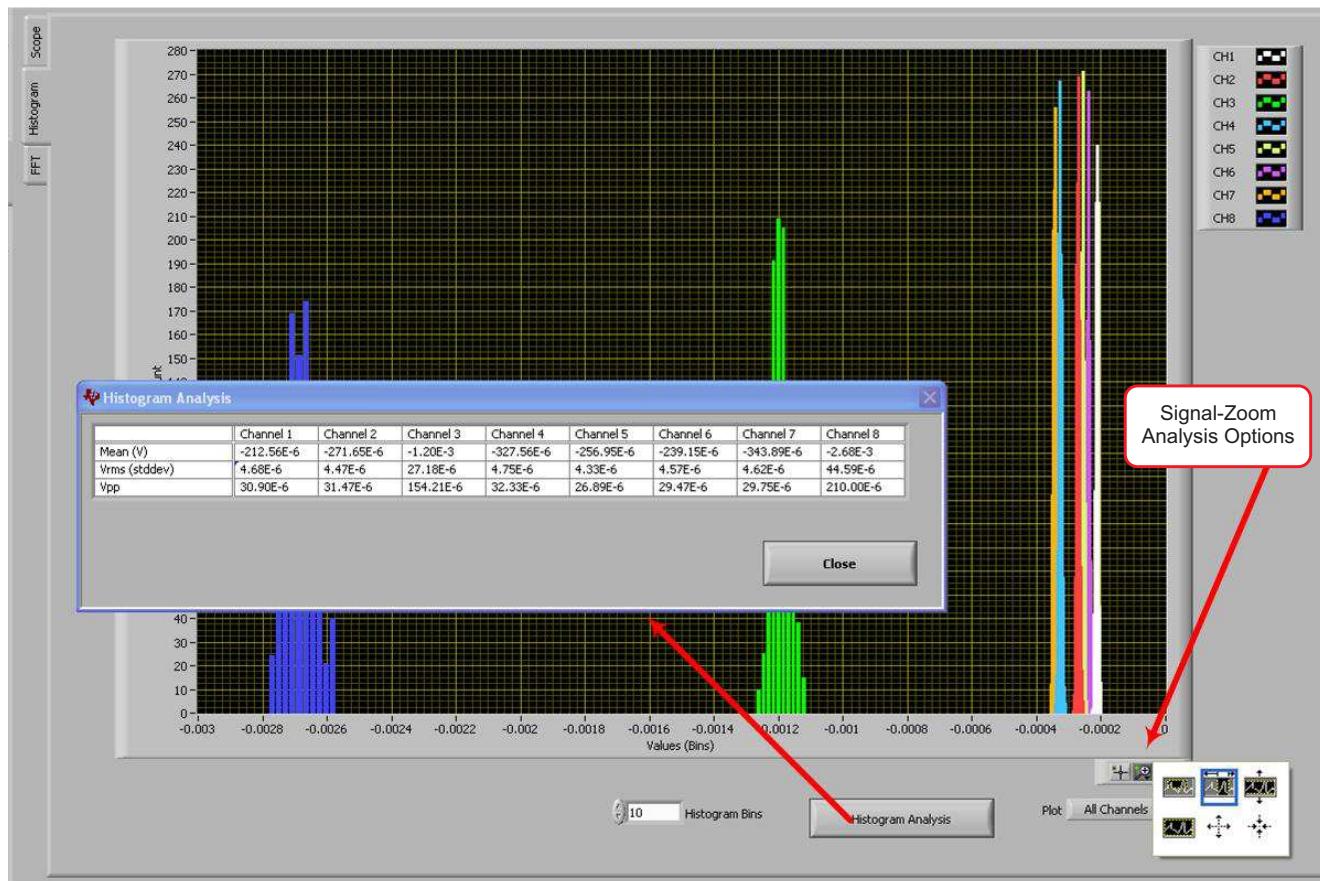

The waveform examination tool allows the user to either zoom in on all channels simultaneously, or on just a single channel. [Figure 24](#) shows an example of the waveform examination tool.

**Figure 24. Zoom Option on the Waveform Examination Tool**

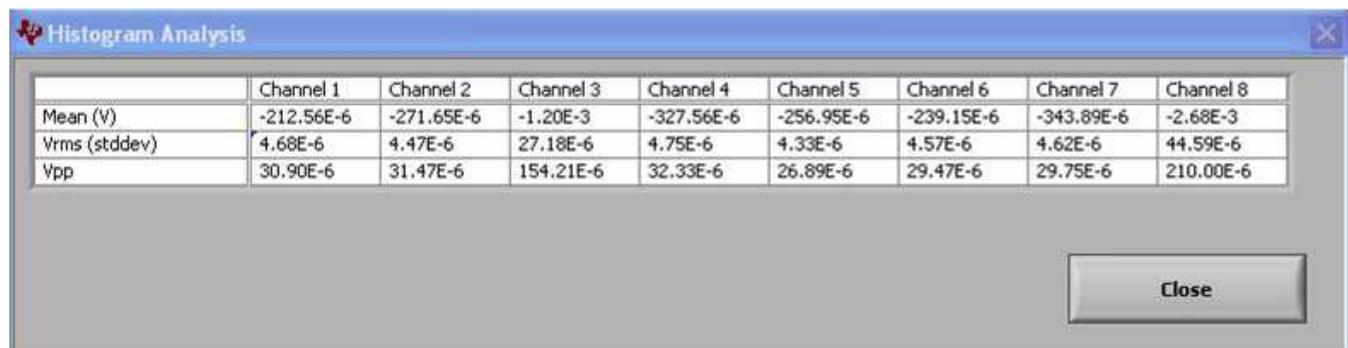

## 5.2 Histogram Tool

The *Histogram* subtab displays the data in a histogram format for the eight channels. The data set is arranged in the total number of histogram bins set within the tab following acquisition. The screen shot shown in [Figure 25](#) illustrates the histogram output for an input shorted signal. The same signal-zoom analysis shown in the previous section may be used on the histogram plots for a more detailed examination of the amplitude bins.

**Figure 25. Histogram Bins**

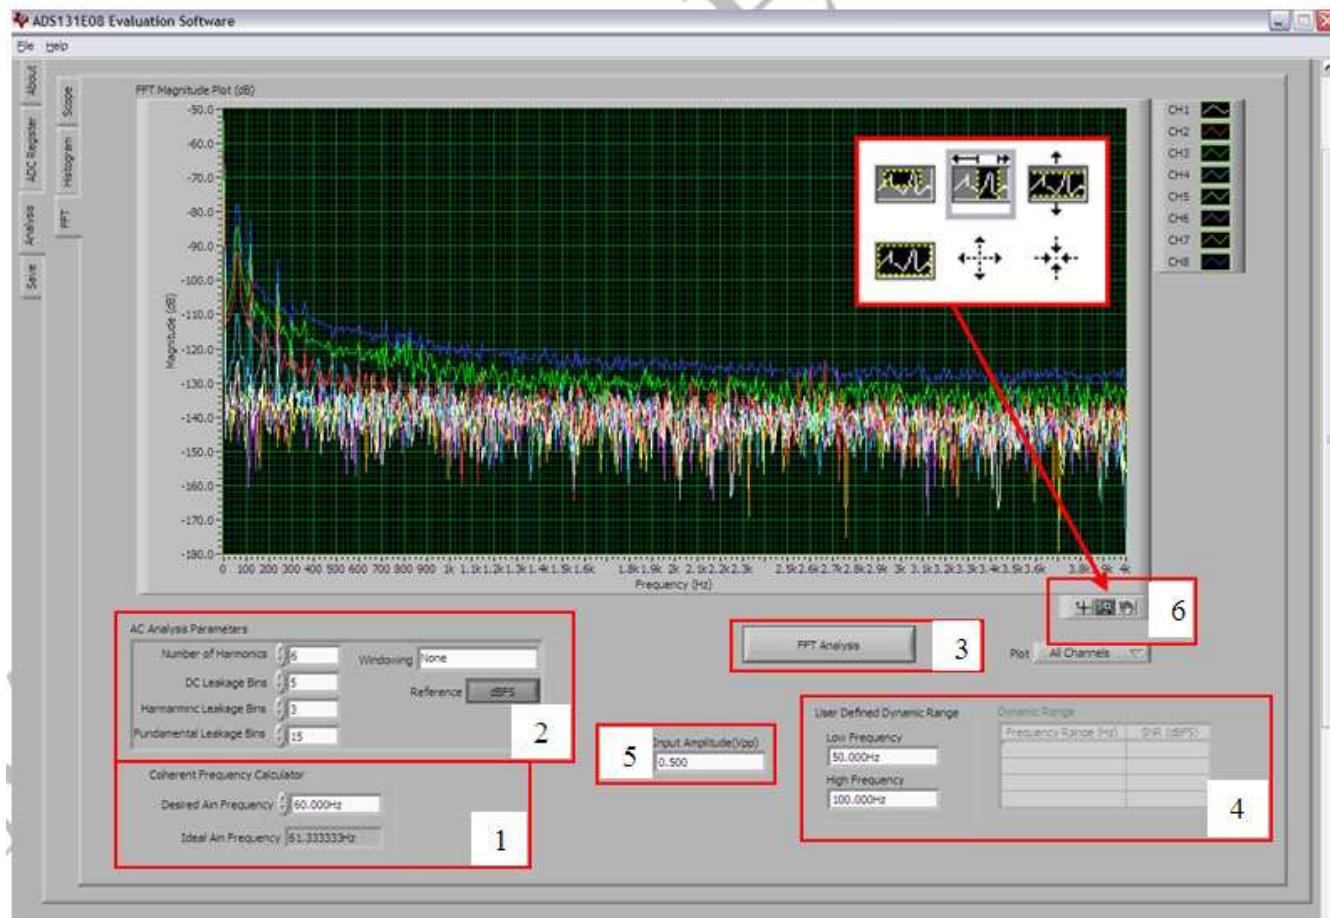

The *Histogram Analysis* button can be used to view the mean voltage, standard deviation used for the RMS voltage, and peak-to-peak voltage for analysis, as shown in [Figure 26](#).

**Figure 26. Statistics for the Signal Amplitude of Eight Channels**

### 5.3 FFT Tool

The *FFT* subtab displays the data in the frequency domain by performing an FFT on the eight channels. Details of the FFT, including SNR, THD, and more, can be viewed using the *FFT Analysis* button located at the bottom of the display. [Figure 27](#) shows the FFT display.

**Figure 27. Analysis→FFT Graph of Normal Electrode Configuration**

#### 5.3.1 Coherent Frequency Calculator

The red box labeled 1 in [Figure 27](#) shows the Coherent Frequency Calculator. Coherent sampling in an FFT is defined in [Equation 3](#):

$$\frac{f_{AIN}}{f_{SAMPLE}} = \frac{N_{WINDOW}}{N_{TOTAL}}$$

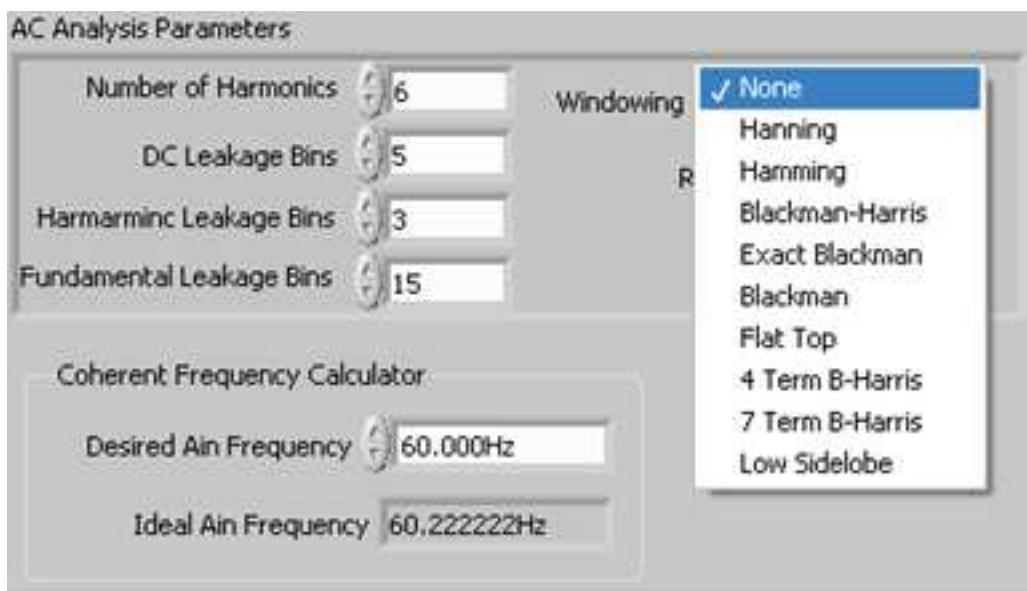

where:

- $f_{AIN}$  = input frequency
- $f_{SAMPLE}$  = ADS131E08 sampling frequency
- $N_{WINDOW}$  = number of odd integer cycles during a given sampling period
- $N_{TOTAL}$  = number of data points (in power of 2) that is used to create the FFT. (3)

If the conditions for coherent sampling can be met, the FFT results for a periodic signal are optimized. The ideal  $A_{IN}$  frequency is a value that is calculated based on the sampling rate so that the coherent sampling criteria can be met.

### 5.3.2 AC Analysis Parameters

The *AC Analysis Parameters* portion of the FFT tool (red box 2 in [Figure 27](#)) is used to dictate the number of harmonics, dc leakage bins, harmonic leakage bins, and fundamental leakage bins that are used in the creation of various histograms. Press the *Windowing* button, shown in [Figure 28](#), to evaluate the FFT graph under a variety of different windowing options. Pressing the *Reference* button toggles between dBFS (decibels, full-scale) and dBc (decibels to carrier).

**Figure 28. Analysis→FFT→AC Analysis Parameters: Windowing Options**

### 5.3.3 FFT Analysis

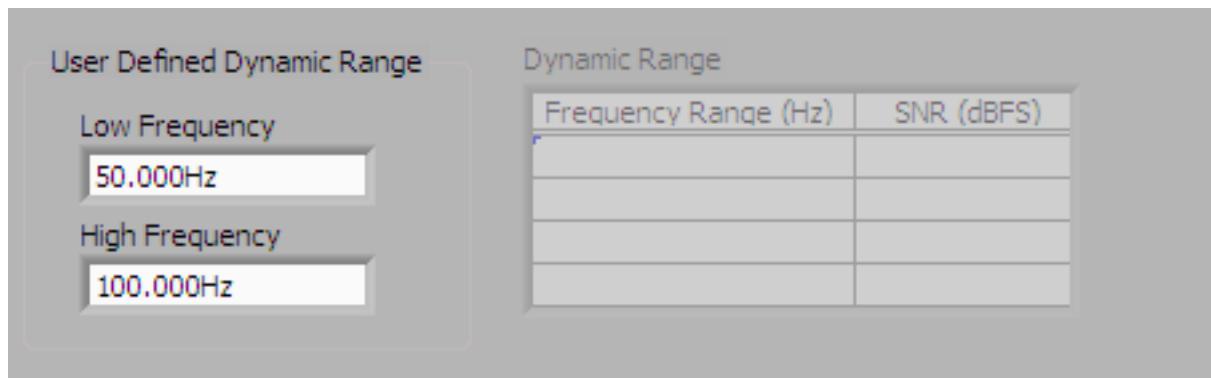

The *FFT Analysis* button (red box 3, [Figure 27](#)) pulls up the window shown in [Figure 29](#). This window displays the ac details of the data set after it is viewed in the frequency domain. The SNR, THD, and harmonic information is listed in a table format.

	Channel 1	Channel 2	Channel 3	Channel 4	Channel 5	Channel 6	Channel 7	Channel 8
SNR (dBFS)	-12.34	-15.84	-13.95	-10.60	-10.77	-10.56	-12.10	-13.52
SNR(dB)	-12.64	-16.22	-14.39	-11.30	-11.07	-10.86	-12.44	-13.06
THD (dBc)	0.45	-3.71	-2.30	0.74	2.96	3.37	0.76	-1.50
SFDR (dBc)	5.72	2.26	4.51	6.75	8.43	8.69	6.02	3.25
ENOB	-2.39	-2.99	-2.68	-2.17	-2.13	-2.10	-2.36	-2.60
enob	-2.34	-2.92	-2.61	-2.09	-2.06	-2.05	-2.30	-2.54
# of Harmonics (SNR)	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Worst Spur (dB)	17.11	14.01	10.90	0.97	10.15	0.17	16.76	6.92
2nd HD (dBc)	7.62	2.26	5.01	10.77	13.41	9.53	8.51	3.25
3rd HD (dBc)	5.72	3.88	4.51	6.75	9.03	18.37	9.14	6.22
4th HD (dBc)	8.68	3.37	6.87	7.63	10.15	10.50	6.02	10.24
5th HD (dBc)	8.01	4.70	6.96	8.58	10.74	12.12	8.60	9.03
Fundamental (dB)	-100.74	-101.21	-101.21	-101.39	-101.21	-100.47	-100.97	-101.76
PGA Setting	12	12	12	12	12	12	12	12
CMRR	165.70	161.95	161.37	150.92	159.06	149.57	164.26	155.70

**Figure 29. Analysis→FFT→FFT Analysis: Input Short Condition**

### 5.3.4 User-Defined Dynamic Range

This portion of the FFT tool (red box 4, [Figure 27](#)) is used to examine the SNR of a specific channel within a given frequency band defined by the *Low Frequency* and *High Frequency* fields. The SNR displayed in this window also appears under the *Dynamic Range* heading, as shown in [Figure 30](#).

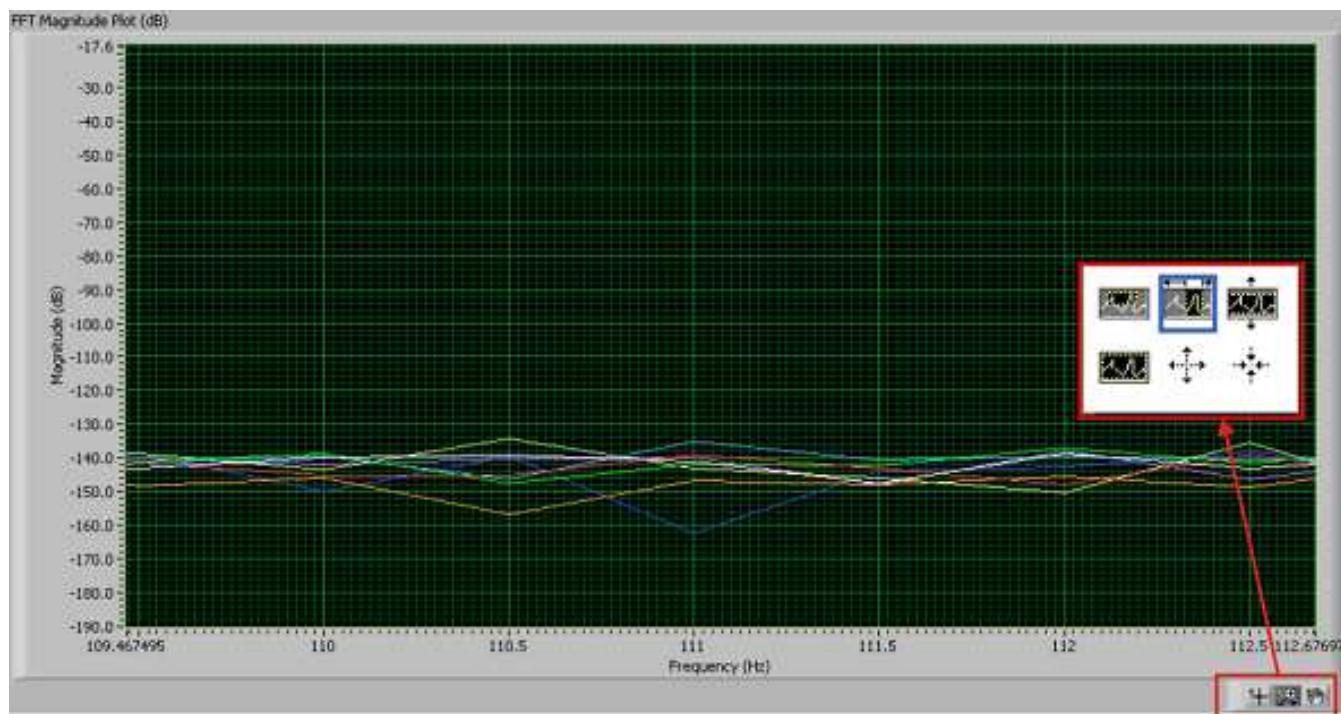

**Figure 30. Changing the User-Defined Dynamic Range for Channel 1**

### 5.3.5 Input Amplitude ( $V_{PP}$ )

The *Input Amplitude* field (red box 5, [Figure 27](#)) is a user input that is important for accurately calculating the CMRR of each channel.

### 5.3.6 Waveform Zoom

This zoom function allows a closer examination of the FFT at frequencies of interest, as shown in [Figure 31](#).

**Figure 31. FFT Plot Using Waveform Zoom Function**

## 6 Bill of Materials (BOM), Layout, and Schematic

This section contains the complete BOM, printed circuit board (PCB) layouts, and schematic diagrams for the ADS131E08.

---

**NOTE:** Board layouts are not to scale. These figures are intended to show how the board is laid out; they are not intended to be used for manufacturing ADS131E08 PCBs.

---

### 6.1 Bill of Materials

Table 11 lists the bill of materials for the ADS131E08.

**Table 11. ADS131E08 Bill of Materials**

## 6.2 PCB Layout

The ADS131E08 PCB layout is appended to this document.

## 6.3 Front-End Board Schematic

The ADS131E08 schematic is appended to this document.

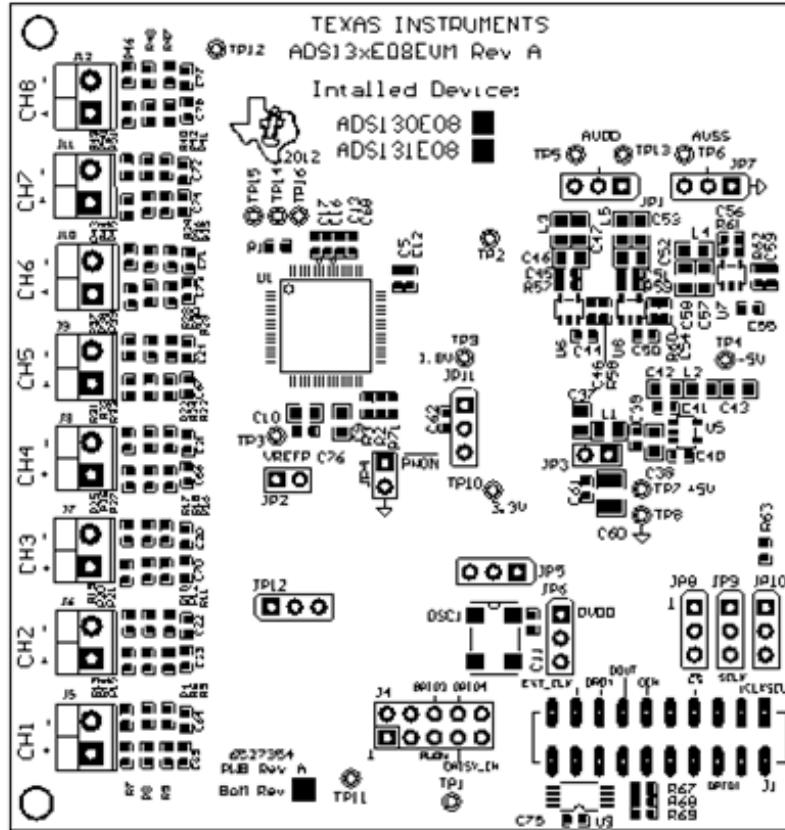

### Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

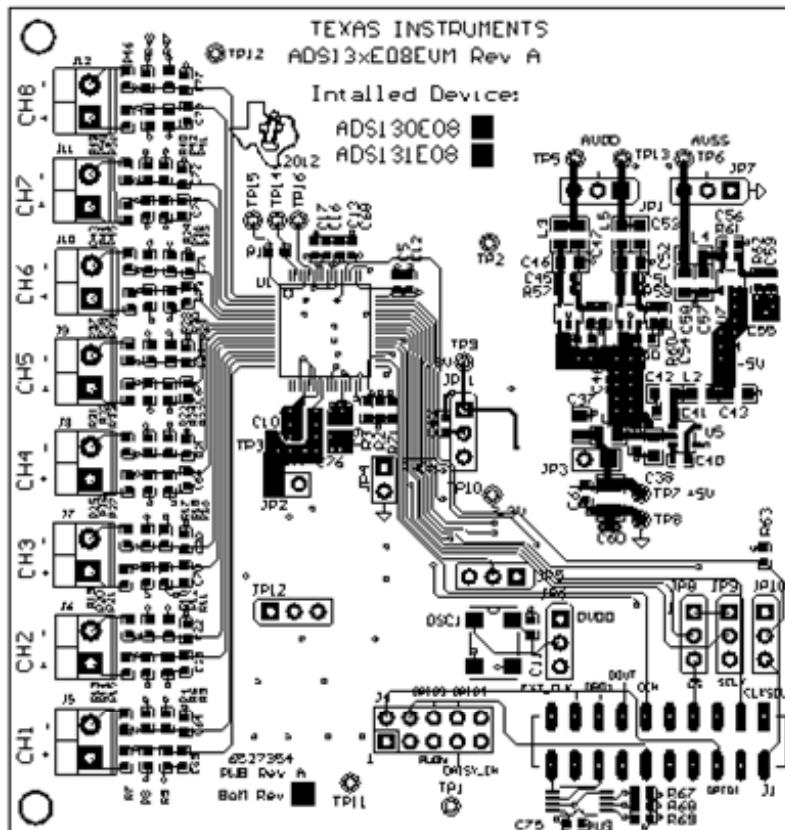

Changes from B Revision (February 2016) to C Revision	Page
• Corrected <a href="#">Table 4</a> .	11

Changes from A Revision (February 2016) to B Revision	Page
• Removed <i>supplied wall-mount power supply</i> from the <i>Installing the First USB Driver</i> section.	7

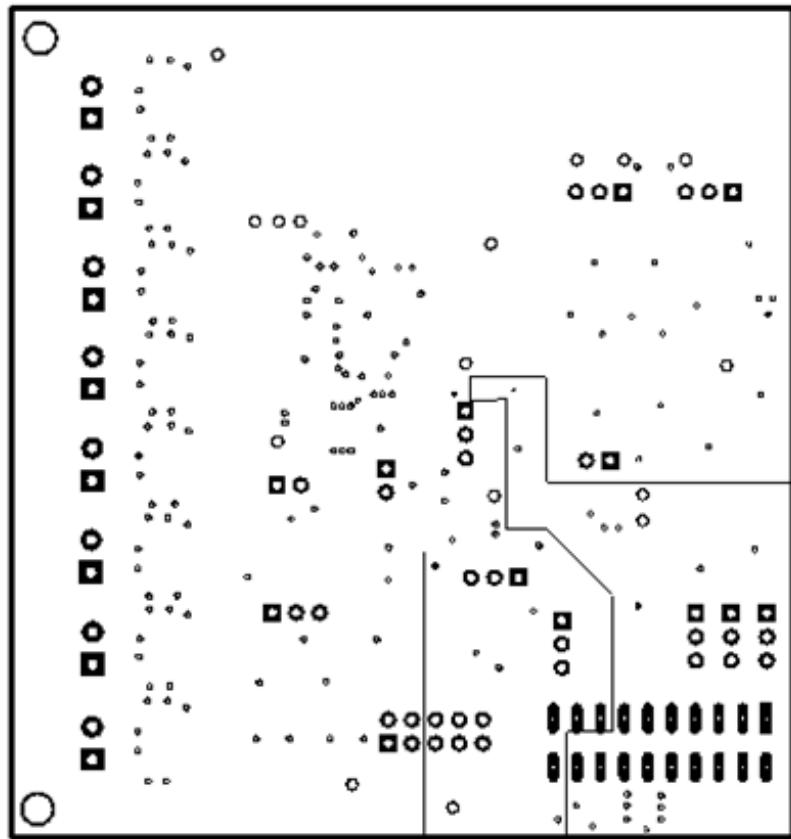

Changes from Original (June 2012) to A Revision	Page
• Removed support for <i>included</i> power adapter for this EVM.	4
