- Boards Tested at  $T_s = 25\text{ }^\circ\text{C}$
- Forward voltage Tolerances:  $\pm 0.2\text{V}$
- Luminous Flux Tolerances:  $\pm 0.5\%$
- Color Rendering Index Tolerance (Ra):  $\pm 2$
- Color Rendering Index Tolerance (R9):  $\pm 4$
- Incorrect wiring may damage the LED module.
- All data is related to the entire module. Data reflects standard mean values.
- Actual data may differ depending on Variance in the LED and manufacturing process.
- Performance values were taken at steady state.
- Instant-ON measurement may be higher.
- Exceeding maximum rating may damage the LED Light engine and cause potential safety hazard.
- Elevated operating temperatures can damage the board, LEDs and life in terms of lumen output.
