

32 Gbps LIMITING AMPLIFIER

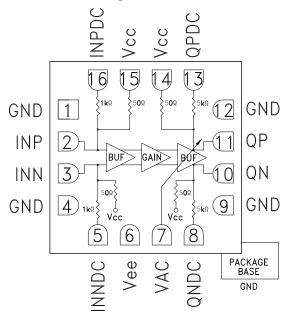

HMC866LC3

Typical Applications

The HMC866LC3 is ideal for:

- 100 Gbps Ethernet
- 100 Gbps Long Haul
- 40 Gbps (D)QPSK Receivers
- Broadband Gain Block for Test & Measurement Equipment

Functional Diagram

3-dB Bandwidth: 26.5 GHz

Adjustable Output Voltage

Supports Data Rates up to 43 Gbps.

Differential Small Signal Gain: 29 dB

Input Sensitivity: 20 mVp-p Differential

Swing up to 800 mVp-p Differential 16 Lead 3x3mm SMT package: 9mm²

Low Power Dissipation: 280 mW @ Vcc = +3.3V

Features

General Description

The HMC866LC3 is a Limiting Amplifier packaged in a leadless 3x3 mm ceramic surface mount package. The amplifier supports up to 43 Gbps operation and provides 29 dB of differential gain. The output voltage swing is adjustable up to 800 mVp-p differential by using the VAC analog control input and the additive RMS jitter is less than 300 fs for 32 Gbps operation. The amplifier allows external offset correction function to both inputs and outputs.

All input/output RF signals of the HMC866LC3 are terminated with 50 Ohms to +3.3V internally and may be either AC or DC coupled. The outputs of the device can be operated either differentially or singleended. Outputs can be connected directly to 50 Ohm terminated system referenced to 3.3V, while DC blocking capacitors may be used if the terminating system is 50 Ohms to a non 3.3V level.

Electrical Specifications, $T_A = +25^{\circ}$ C, Vcc = +3.3V, Vee = 0V, Icc = 85mA

[1] Reference this number when ordering complete evaluation PCB

[2] Circuit Board Material: Arlon 25FR or Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.

32 Gbps LIMITING AMPLIFIER

Application Information

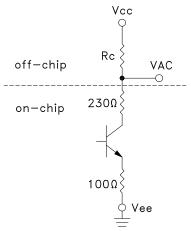

Setting the output swing using external resistor Rc

The HMC866LC3 features output swing level adjustment by using VAC pin. Output swing can be adjusted to the desired level by applying a DC voltage to VAC pin. Differential output swing vs. control voltage relationship is given in the plot below.

Differential Output vs. Control Voltage

In order to adjust the DC voltage on VAC pin a resistor, Rc, should be connected between VAC pin and VCC as shown in the figure below.

The value of the resistor can be chosen using the following equation as a function of VAC. VAC DC voltage value can be chosen by using the plot given above.

$$Rc = \frac{330(Vcc-VAC)}{VAC-0.86}$$
