### Notes

1. Test environment of all data is referenced to 25°C ambient.
2. Test conditions: 1MHz, 1Vrms.
3. Isat : DC current (A) that will cause L to drop approximately 30%.
4. Irms : DC current (A) that will cause an approximate  $\Delta T$  of 40°C (reference ambient temperature is 25°C).
5. Operating temperature range – 40°C to +125°C.
6. The part temperature (ambient + temp rise) should not exceed 125°C under worst case operating conditions. PCB land pattern, trace size - thick, circuit design and proximity to other components are all the factors will affect the temperature performance of the device. Therefore should be approved in application conditions and end product.
7. Rdc Measured with DC resistance meters RM3543(HIOKI) or equivalent.
