10 Electrical interface

10.1 Transmission line and matching

The matching network has to be individually designed using one, two or three components.

The schematic picture describes the radio module and the matching network. The matching network shall be designed as a PI net. The antenna acts as an active part of the device, the number and value of matching components will be unique for your application.

10.2 Test board dimensions

The testboard is designed for evaluation purposes for the Picea 2.4 GHz. The card has the same size as a typical PCMCIA card. The board is fitted with an SMA connector.

10.3 Test board matching

The testboard is matched with above specified components.

Note! The component values will vary depending on size of PCB board, surrounding components etc.

11 Reliability

11.1 Temperature and Humidity

Item	Standard	Low	High	Duration
Operating temperature	EN/IEC 60068-2-2, Test Bd: Dry heat	-30 degC	+90 degC	-
Temperature cycling	EN/IEC 60068-2-14, Test Na: Change of temperature	-40 degC	+90 degC	500 cycles / 10 min
Storage life Humidity	EN/IEC 60068-2-1, Test Ca: Damp heat	+60 degC / 90% RH		500 h
Storage life Low temperature	EN/IEC 60068-2-1, Test Ad: Cold	-55 degC	-	500 h
Storage life High temperature	EN/IEC 60068-2-2, Test Bb: Dry heat	-	+125 degC	500 h

11.2 Judgement standard

The judgement of the above tests should be made as follows:

1. Visual inspection - Normal appearance with no obvious cracking, peeling-off.
2. Electrical inspection - The DUT satisfies the VSWR specification throughout the 2.4-2.5 GHz band.

12 Hazardous Material Regulation Conformance

Cadmium and cadmium compound.

Organic brominated compound (PBB, PBDE)

Polychlorinated biphenyl (PCB)

Polychlorinated naphthalene (PCN)

Organic tin compound

Asbestos

Azo compound

Lead and lead compound

Mercury and mercury compound

Sesivalent chrome compound

Chlorinated paraffin (CP)

Mirex

Formaldehyde

Tetra-bromo-bisphenol-A-bis (TBBP-A-bis)

13 Application example

Fig. 1

1. Placement of antenna

The antenna shall preferably be placed at the edge of the PCB oriented as above so that the antenna blade can be placed outside the application's casing. Other placements and orientations and size of groundplanes are possible, but this will affect the performance. Avoid active components near the antenna.

2. Placement of 2.4 GHz module

To avoid losses the module shall be placed as close to the antenna as possible.

3. Strip line

The strip line must be dimensioned according to your specific PCB. (see fig 1). No crossing strip lines are allowed between the strip line and its ground plane.

4. Via connections

To avoid spurious effects, via connections must be made to analogue ground.

5. Component matching

Component values are depending on antenna placement, PCB dimensions and location of other components.

6. DC Block

Might be needed depending on RF Module configuration.

7. Clearance area

Avoid components and parts close to the antenna.

**Note! Incorrect implementation of the antenna will affect the performance.
