Break the 1 Gigabit logjam that's bogging down your network. Today it's fast, easy, and inexpensive to upgrade your network with New 2.5Gb network adapters for your desktop, server, and laptop.

The N-660 utilizes the new Ethernet standard (IEEE 802.3bz) based on the same technology as 10Gb Ethernet with a transfer rate to 2.5Gbits/sec. This data rate is 2.5 times faster than 1Gb networks allowing you to move files faster yet runs on the same Cat5e cable.

Increase your network speed and efficiency while avoiding the high cost of upgrading to a 10Gb network. Four independent Multi-Gigabit RJ45 ports allow connectivity to multiple networks for high-bandwidth workstations and servers.

Having more than one Ethernet Port / Multiple NICS can enable teaming, increasing Network Bandwidth through a supported switch. Enable your PC to act like a Router or a Firewall, having more than one Ethernet port allows you to have peer connections to other devices. Don't be IO-Bound, each port can be on a separate network. You can even run a home media server to multiple devices across the house.
