STRAIGHT PRESS MOUNT MALE RECEPTACLE FRONT MOUNT - WITH CYLINDRICAL CONTACT

The connecting range represents the maximum misalignment during connection.

Radiall 🚺

The swiveling angle is the maximum possible angle of the adapter in a snap receptacle.

A blind assembly is guaranteed if radial misalignment is smaller than connecting range. Otherwise a manual lead-in is necessary.

Electrical performance is achieved when radial and axial misalignments are within their working ranges. Radial working range = (length of the adapter) x Sinus(radial working angle).
