

CTVS - Ceramic transient voltage suppressors

Multilayer varistors (MLVs), G series, open mode design

Series/Type: CT1210S14BAUTOGOM_G
Ordering code: B72530G1140S862
Date: 2020-04-08
Version: 1

Description

The G series multilayer ceramic varistors has been developed to protect automotive electronic circuits against transient overvoltages, such as electrostatic discharges and surge currents. The open mode design excludes an overlap of the inner active area with the termination band width. Thus the likelihood that a potential bending crack of the MLV will link opposite electrodes causing a short is minimized.

Features

- Open mode design
- Fulfill failsafe requirements acc. VW 80808-1: 2020-03
- Qualified based on AEC-Q200 and VW 80808-2: 2020-03
- Reliable ESD protection up to 30 kV acc. to IEC 61000-4-2
- Protection against electrical transients acc. to ISO 7637-2
- High energy absorption capability
- Low leakage current
- No temperature derating up to 150 °C
- High life time robustness
- Stable protection level
- RoHS-compatible, lead-free

Designation system

CT	C hip with t hree-layer-termination (Ag/Ni/Sn)
1210	Dimensions of the device 12 x 10 (length x width in 1/100 inch)
S...B	S pecial tolerance B of the varistor voltage
14	Maximum RMS operating voltage
AUTO	Suited for AUTO motive application
G	Taped version, blister tape, 7" reel (3000 pcs./ reel)
OM	O pen M ode design
_G	Identifier for MLV automotive G series

Electrical data

Maximum operating voltage

RMS voltage	V_{RMS}	= 14 V
DC voltage	V_{DC}	= 16 V

Varistor voltage (@ 1 mA, 25 °C)

$$V_V = 22.0 \dots 27.0 \text{ V}$$

Maximum clamping voltage (@ 2.5 A)

$$V_{clamp,max} = 40 \text{ V}$$

Maximum leakage current (@ 16 V, 25 °C)

$$I_{leak,max} = 5 \mu\text{A}$$

Typical leakage current (@ 14 V, 25 °C)

$$I_{leak} = <2.5 \mu\text{A}$$

Maximum average power dissipation

$$P_{diss,max} = 10 \text{ mW}$$

Maximum surge current (8/20 μs)

$$I_{surge,max} = 1 \times 400 \text{ A}$$

Maximum energy absorption (2 ms)

$$W_{max} = 1600 \text{ mJ}$$

Load dump

$$W_{LD} = 10 \times 3 \text{ J}$$

Jump-start

$$V_{jump} = 24.5 \text{ V, 5 min.}$$

Capacitance (@ 1 kHz, 1 V, 25 °C)

$$C_{max} = 3.6 \text{ nF}$$

Response time

$$t_{resp} = <0.5 \text{ ns}$$

Operating temperature

$$T_{op} = -55 \dots +150 \text{ }^\circ\text{C}$$

Storage temperature (mounted parts)

$$T_{stg} = -55 \dots +150 \text{ }^\circ\text{C}$$

V/I characteristics

Derating curves

Temperature derating

The specified ratings for I_{max} , $I_{surge,max}$ and $P_{diss,max}$ are valid up to 150 °C. For operation above 150 °C we recommend the below derating.

Dimensional drawing

Dimensions in mm

Case size	l	w	h	k
1210	3.2 ±0.3	2.5 ±0.25	1.7 max	0.20 ... 0.50

Recommended solder pad layout

Dimensions in mm

Case size	A	B	C
1210	2.80	1.20	2.10

Recommended soldering profiles

Reflow soldering

Temperature ranges for reflow soldering acc. To IEC 60068-2-58 recommendations.

Profile feature		Sn-Pb eutectic assembly	Pb-free assembly
Preheat and soak			
- Temperature min	T_{smin}	100 °C	150 °C
- Temperature max	T_{smax}	150 °C	200 °C
- Time	t_{smin} to t_{smax}	60 ... 120 s	60 ... 120 s
Average ramp-up rate	T_{smax} to T_p	3 °C/s max.	3 °C/s max.
Liquidous temperature	T_L	183 °C	217 °C
Time at liquidous	t_L	40 ... 150 s	40 ... 150 s
Peak package body temperature	T_p ¹⁾	215 °C ... 260 °C	235 °C ... 260 °C
Time (t_p) above ($T_p - 5$ °C)	t_p	10..40 s	10..40 s
Average ramp-down rate	T_p to T_{smax}	6 °C/s max.	6 °C/s max.
Time 25 °C to peak temperature		maximum 8 min	maximum 8 min

1) Depending on package thickness.

Note: All temperatures refer to topside of the package, measured on the package body surface.

Number of reflow cycles: 3

Iron soldering should be avoided, hot air methods are recommended for repair purposes.

Wave soldering temperature profile

Temperature characteristic at component terminal with dual-wave soldering

Recommended solder

The use of no-clean solder products is recommended. In any case mild, non-activated fluxes should be used. Flux residues after soldering should be minimized.

Storage conditions

In order to maintain solderability the components must be stored in a non-corrosive atmosphere. Humidity, temperature and container materials are critical factors.

Do not store the components where they are exposed to heat or direct sunlight. Otherwise the packing material may be deformed or the components may stick together, causing problems during mounting. After opening the factory seals, such as polyvinyl-sealed packages, use the components as soon as possible.

The components should be left in the original packing. Touching the metallization of unsoldered components may change their soldering properties.

Storage temperature: -25 ... +45 °C

Relative humidity: <75% annual average, <95% on max. 30 days in a year, dew precipitation and wetness are inadmissible.

Solder the components listed in this data sheet after shipment from TDK within 12 months.

Taping and packaging

Tape and reel packing according to IEC 60286-3

Tape material: Blister

Dimensions and tolerances

Definition	Symbol	Dimension [mm]	Tolerance [mm]
Tape width	W	8.00	±0.30

Package: 8-mm tape

Packing

Packing material: Plastic

Reel dimensions

Definition	Symbol	Dimension [mm]	Tolerance [mm]
Reel diameter	A	180	+0/-3
Reel width (inside)	W ₁	8.4	+1.5/-0
Reel width (outside)	W ₂	14.4	max.

Packing unit: 3000 pcs./ reel

Cautions and warnings

General

Some parts of this publication contain statements about the suitability of our ceramic transient voltage suppressor (CTVS) components (multilayer varistors (MLVs)), CeraDiodes, ESD/EMI filters, leaded transient voltage/ RFI suppressors (SHCV types)) for certain areas of application, including recommendations about incorporation/design-in of these products into customer applications. The statements are based on our knowledge of typical requirements often made of our CTVS devices in the particular areas. We nevertheless expressly point out that such statements cannot be regarded as binding statements about the suitability of our CTVS components for a particular customer application. As a rule, TDK Electronics is either unfamiliar with individual customer applications or less familiar with them than the customers themselves. For these reasons, it is always incumbent on the customer to check and decide whether the CTVS devices with the properties described in the product specification are suitable for use in a particular customer application.

- Do not use TDK Electronics CTVS components for purposes not identified in our specifications, application notes and data books.
- Ensure the suitability of a CTVS in particular by testing it for reliability during design-in. Always evaluate a CTVS component under worst-case conditions.
- Pay special attention to the reliability of CTVS devices intended for use in safety-critical applications (e.g. medical equipment, automotive, spacecraft, nuclear power plant).

Design notes

- Always connect a CTVS in parallel with the electronic circuit to be protected.
- Consider maximum rated power dissipation if a CTVS has insufficient time to cool down between a number of pulses occurring within a specified isolated time period. Ensure that electrical characteristics do not degrade.
- Consider derating at higher operating temperatures. Choose the highest voltage class compatible with derating at higher temperatures.
- Surge currents beyond specified values will puncture a CTVS. In extreme cases a CTVS will burst.
- If steep surge current edges are to be expected, make sure your design is as low-inductance as possible.
- In some cases the malfunctioning of passive electronic components or failure before the end of their service life cannot be completely ruled out in the current state of the art, even if they are operated as specified. In applications requiring a very high level of operational safety and especially when the malfunction or failure of a passive electronic component could endanger human life or health (e.g. in accident prevention, life-saving systems, or automotive battery line applications such as clamp 30), ensure by suitable design of the application or other measures (e.g. installation of protective circuitry or redundancy) that no injury or damage is sustained by third parties in the event of such a malfunction or failure. Only use CTVS components from the automotive series in safety-relevant applications.
- Specified values only apply to CTVS components that have not been subject to prior electrical, mechanical or thermal damage. The use of CTVS devices in line-to-ground applications is therefore not advisable, and it is only allowed together with safety countermeasures like thermal fuses.

Storage

- Only store CTVS in their original packaging. Do not open the package before storage.
- Storage conditions in original packaging: temperature -25 to $+45^{\circ}\text{C}$, relative humidity $\leq 75\%$ annual average, maximum 95% , dew precipitation is inadmissible.
- Do not store CTVS devices where they are exposed to heat or direct sunlight. Otherwise the packaging material may be deformed or CTVS may stick together, causing problems during mounting.
- Avoid contamination of the CTVS surface during storage, handling and processing.
- Avoid storing CTVS devices in harmful environments where they are exposed to corrosive gases for example (SO_x , Cl).
- Use CTVS as soon as possible after opening factory seals such as polyvinyl-sealed packages.
- Solder CTVS components after shipment from TDK Electronics within the time specified:
 - CTVS with Ni barrier termination, 12 months
 - CTVS with AgPt termination, 6 months
 - SHCV 24 months

Handling

- Do not drop CTVS components and allow them to be chipped.
- Do not touch CTVS with your bare hands - gloves are recommended.
- Avoid contamination of the CTVS surface during handling.
- Washing processes may damage the product due to the possible static or cyclic mechanical loads (e.g. ultrasonic cleaning). They may cause cracks to develop on the product and its parts, which might lead to reduced reliability or lifetime.

Mounting

- When CTVS devices are encapsulated with sealing material or overmolded with plastic material, electrical characteristics might be degraded and the life time reduced.
- Make sure an electrode is not scratched before, during or after the mounting process.
- Make sure contacts and housings used for assembly with CTVS components are clean before mounting.
- The surface temperature of an operating CTVS can be higher. Ensure that adjacent components are placed at a sufficient distance from a CTVS to allow proper cooling.
- Avoid contamination of the CTVS surface during processing.

Soldering

- Complete removal of flux is recommended to avoid surface contamination that can result in an instable and/or high leakage current.
- Use resin-type or non-activated flux.
- Bear in mind that insufficient preheating may cause ceramic cracks.
- Rapid cooling by dipping in solvent is not recommended, otherwise a component may crack.

Operation

- Use CTVS only within the specified operating temperature range.
- Use CTVS only within specified voltage and current ranges.
- Environmental conditions must not harm a CTVS. Only use them in normal atmospheric conditions. Reducing the atmosphere (e.g. hydrogen or nitrogen atmosphere) is prohibited.
- Prevent a CTVS from contacting liquids and solvents. Make sure that no water enters a CTVS (e.g. through plug terminals).
- Avoid dewing and condensation.
- TDK Electronics CTVS components are mainly designed for encased applications. Under all circumstances avoid exposure to:
 - direct sunlight
 - rain or condensation
 - steam, saline spray
 - corrosive gases
 - atmosphere with reduced oxygen content
- TDK Electronics CTVS devices are not suitable for switching applications or voltage stabilization where static power dissipation is required.

This listing does not claim to be complete, but merely reflects the experience of TDK Electronics AG.

Display of ordering codes for TDK Electronics products

The ordering code for one and the same product can be represented differently in data sheets, data books, other publications, on the company website, or in order-related documents such as shipping notes, order confirmations and product labels. **The varying representations of the ordering codes are due to different processes employed and do not affect the specifications of the respective products.** Detailed information can be found on the Internet under www.tdk-electronics.tdk.com/orderingcodes.

Important notes

The following applies to all products named in this publication:

1. Some parts of this publication contain **statements about the suitability of our products for certain areas of application**. These statements are based on our knowledge of typical requirements that are often placed on our products in the areas of application concerned. We nevertheless expressly point out **that such statements cannot be regarded as binding statements about the suitability of our products for a particular customer application**. As a rule, we are either unfamiliar with individual customer applications or less familiar with them than the customers themselves. For these reasons, it is always ultimately incumbent on the customer to check and decide whether a product with the properties described in the product specification is suitable for use in a particular customer application.
2. We also point out that **in individual cases, a malfunction of electronic components or failure before the end of their usual service life cannot be completely ruled out in the current state of the art, even if they are operated as specified**. In customer applications requiring a very high level of operational safety and especially in customer applications in which the malfunction or failure of an electronic component could endanger human life or health (e.g. in accident prevention or life-saving systems), it must therefore be ensured by means of suitable design of the customer application or other action taken by the customer (e.g. installation of protective circuitry or redundancy) that no injury or damage is sustained by third parties in the event of malfunction or failure of an electronic component.
3. **The warnings, cautions and product-specific notes must be observed.**
4. In order to satisfy certain technical requirements, **some of the products described in this publication may contain substances subject to restrictions in certain jurisdictions (e.g. because they are classed as hazardous)**. Useful information on this will be found in our Material Data Sheets on the Internet (www.tdk-electronics.tdk.com/material). Should you have any more detailed questions, please contact our sales offices.
5. We constantly strive to improve our products. Consequently, **the products described in this publication may change from time to time**. The same is true of the corresponding product specifications. Please check therefore to what extent product descriptions and specifications contained in this publication are still applicable before or when you place an order.

We also **reserve the right to discontinue production and delivery of products**. Consequently, we cannot guarantee that all products named in this publication will always be available. The aforementioned does not apply in the case of individual agreements deviating from the foregoing for customer-specific products.

6. Unless otherwise agreed in individual contracts, **all orders are subject to our General Terms and Conditions of Supply**.
7. **Our manufacturing sites serving the automotive business apply the IATF 16949 standard**. The IATF certifications confirm our compliance with requirements regarding the quality management system in the automotive industry. Referring to customer requirements and customer specific requirements ("CSR") TDK always has and will continue to have the policy of respecting individual agreements. Even if IATF 16949 may appear to support the acceptance of unilateral requirements, we hereby like to emphasize that **only requirements mutually agreed upon can and will be implemented in our Quality Management System**. For clarification purposes we like to point out that obligations from IATF 16949 shall only become legally binding if individually agreed upon.

Important notes

8. The trade names EPCOS, CeraCharge, CeraDiode, CeraLink, CeraPad, CeraPlas, CSMP, CTVS, DeltaCap, DigiSiMic, ExoCore, FilterCap, FormFit, LeaXield, MiniBlue, MiniCell, MKD, MKK, MotorCap, PCC, PhaseCap, PhaseCube, PhaseMod, PhiCap, PowerHap, PQSine, PQvar, SIFERRIT, SIFI, SIKOREL, SilverCap, SIMDAD, SiMic, SIMID, SineFormer, SIOV, ThermoFuse, WindCap are **trademarks registered or pending** in Europe and in other countries. Further information will be found on the Internet at www.tdk-electronics.tdk.com/trademarks.
