

2D_024_010A 24V 10W DC-DC Converter

The Helix Semiconductors MuxCapacitor® 2D_024_010A is a member of the MxC® 200 family of monolithic configurable high voltage switch capacitor DC-DC converters targeted for use in both non-isolated and isolated, buck or boost converter applications. The 2D_024_010A supports a seamless interface to transformerless isolated (TL) low voltage PoL regulators to provide highly efficient DC-DC converter solutions with 10V to 28.5V input voltages for regulated or non-regulated PoL solutions. Consisting of two unique capacitive conversion stages, each capable of providing a separate output voltage, the 2D_024_010A can easily be configured to support TL systems with multiple voltage requirements. Intelligent timing & control optimize power delivery efficiency from no-load to maximum power.

Applications

- PoE: Wireless Access Points, Security Cameras, VoIP Phones
- IoT & IIoT Gateways
- Electric & Hybrid Automobiles
- Industrial Controllers, HVAC
- Telecom, Data Center Functions

Features

- 24V to 12V Input/Output Voltage
 - MuxCap™, G=1/2
 - Up to 28V Input Voltage
 - Up to 2 outputs
- 24V to 48V Input/Output Voltage
- Up to 10W Output
 - Pout = Pout2A + Pout2B
- Idle Operation: Active, No-Load
 - 1mW Non-Switching
 - 48mW Switching
- 24V to 12V peak efficiency of >96%
 - > 90% Efficiency @ 10W
- Maximizes PoL regulator efficiency
- Fault Detection
 - Output Over Current
 - Thermal Shutdown
- Evaluation Boards, Reference Designs
 - Transformerless Isolation - TL
 - Unregulated and Regulated
- Package Options
 - 32 pin QFN, 5mm x 5mm
 - Wire Bond Die

Table 1: 2D_024_010A Pin Assignments

Pin No.	Name	Description
1	VOUT1	MuxCapacitor 1: Output Pin Attach output capacitor from VOUT1 to PGND1.
3	EN	Device Enable: Input Pin, Internal 2MΩ Pull-Down, 60Vmax 0 = Disable, 1 = Enable
5	VDD	Pre-Regulator: Output supply voltage pin Attach 0.1μF capacitor from VDD pin to GND
6	GND	GND for internal reference and analog circuitry
7	VOUTLDO	LDO: 5V Analog Output pin Attach 4.7μF capacitor from VOUTLDO pin to GND
8	VINLDO	LDO: Input supply voltage pin Connect VINLDO pin to VOUT1
11	RT	Charge Pump Frequency: Input Pin Add external resistor from RT pin to GND.
12	EXTCLKSEL	External Clock Sync Enable: Input Pin, Internal 2MΩ Pull-Down, 30Vmax 0 = Internal Clock, 1 = External Clock

13	EXTCLK	External Clock Sync: Input pin, Internal 2M Ω Pull-Down
16	PGND2B	Power GND
17	CFLY2BB	MuxCapacitor 2B: Bottom of flying capacitor
18	VOUT2B	MuxCapacitor 2B: Output Pin Attach output capacitor from VOUT2B to PGND2B.
19	CFLY2BT	MuxCapacitor 2B: Top of flying capacitor
20	VIN2B	MuxCapacitor 2B: DC input voltage supply pin
24	PGND2A	Power GND
25	CFLY2AB	MuxCapacitor 2A: Bottom of flying capacitor
26	VOUTA2	MuxCapacitor 2A: Output Pin Attach output capacitor from VOUT2A to PGND2A.
27	CFLY2AT	MuxCapacitor 2A: Top of flying capacitor
28	VIN2A	MuxCapacitor 2A: DC input voltage supply pin
29	PGND1	Power GND
30	CFLY1B	MuxCapacitor 1: Bottom of flying capacitor
31	VIN1	MuxCapacitor 1: DC input voltage supply pin
32	CFLY1T	MuxCapacitor 1: Top of flying capacitor
2,4,9,10, 14,15,21, 22,23	NC	No Connect
	Thermal Pad	Power GND

2 Absolute Maximum Ratings

The 2D_024_010A can be exposed to the following extremes without permanent damage to device operation. Performance is not guaranteed at these extremes. Continuous operation at these extremes reduces long term reliability.

Table 2: 2D_024_010A Absolute Maximum Ratings

Pin	Min	Max	Unit
VIN1, EN	-0.3	62	V
VIN2, VIN3	-0.3	31	V
VINLDO	-0.3	15	V
EXTCLK	-0.3	30	V
VOUPLDO, VDD, EXTCLKSEL, RT	-0.3	6	V
GND to PGND	-0.3	0.3	V
ESD Voltage: Human Body Model		2	kV
ESD Voltage: Charge coupled Model		500	V
ESD Voltage: Machine Model		200	V
Storage temperature	-40	125	°C
Junction Temperature	-40	125	°C

3 Recommended Operating Conditions

The 2D_024_010A chip is designed to operate within the design limits specified in the Parametric Specifications when the conditions of the following table are not exceeded.

Table 3: 2D_024_010A Recommended Operating Conditions

Definition	Min	Max	Unit
Input Voltage	20	57	V
Output Power	0	15	W
EN	0	57	V
EXTCLK	0	29	V
EXTCLKSEL, RT	0	5.5	V
Junction Temperature	-40	125	°C

4 Electrical Specifications

The electrical characteristics of the Helix Semiconductors 2D_024_010A is tested according to the following criteria:

Unless otherwise stated, these specifications apply over:

10V < VIN1 < 28.5V, 10V < VIN2A & VIN2B < 28.5V,
4.5V < VOUTLDO < 5.5, Fsw=100kHz, -40°C < TJ < 85°C.

Notes:

1. Min and Max values are valid over Operating Conditions, unless otherwise stated.
2. Typ values are valid at typical Operating Conditions and typical process Parameters.
3. Guaranteed by Design.

Table 4: 2D_024_010A Electrical Characteristics

Symbol	Parameter	Condition	Min	Typ	Max	Unit
60V MuxCapacitor Voltage Divider: VIN1/VOUT1						
Vout	Output Voltage	VIN=4V, Po=0W, Note 3.		48		V
Iout	Output Current	Note 3.			0.3	A
Rsw	Switch Rds(on)			600		mΩ
30V MuxCapacitor Voltage Divider: VIN2A/VOUT2A and VIN2B/VOUT2B						
Vout	Output Voltage	VIN=24V, Po=0W, Note 3.		12		V
Iout	Output Current	Note 3.			1	A
Rsw	Switch Rds(on)			300		mΩ
VOUTLDO

5 Functional Description

The Helix Semiconductors 2D_024_010A DC-DC MuxCapacitor IC is an easy to use, highly efficient DC voltage divider. It combines three MuxCapacitor Voltage Dividers to reduce the input voltage allowing the use of lower voltage / lower cost PoL regulators.

Figure 5: 2D_024_010A Functional Block Diagram

Each MuxCapacitor stage has its own input and output pins allowing for multiple configurations. All three stages can be connected in series for access to intermediate voltage reduction outputs. Or, the MuxCapacitor stages can be wired in parallel for added output current capability and efficiency.

5.1 MuxCapacitor Voltage Divider

The 2D_024_010A Muxcapacitor Voltage Dividers (MCVD) divide the DC voltage present at the VIN2A&B pins to reduced voltages at the VOUT2A, and VOUT2B pins which provides the input voltage to an external POL regulator. Also, the input voltage present at VIN1 is doubled at the VOUT1 output.

The MCVD is comprised of two stages, each with a gain of $\frac{1}{2}$ and a third stage with a 2x gain.

Each MCVD uses an external flying capacitor, an internal switching circuit, and an external hold capacitor. The switching device is configured to operate the corresponding voltage reduction circuit at charging and discharging phases from a two-phase non-overlapping on-chip clock generator.

Each MuxCapacitor contains over-current protection. The over-current protection automatically resets once the over-current condition clears. This feature is active at startup enhancing the soft-start ramp-up at each VOUTx.

5.2 Low Drop-Out Voltage Regulator

An integrated 5V LDO provides the supply voltage for the analog circuits. The 5V LDO is powered from the VINLDO pin. The VINLDO supply voltage range is 7-15V.

The 5V LDO uses the bandgap output as the reference voltage to generate the desired output voltage.

5.3 Under-Voltage Lockout and POR

The integrated under-voltage lockout circuit monitors the voltages at the 5V LDO output, and the Enable pin. It ensures that the MuxCapacitor outputs remain in the off state whenever one of these signals drop below the set thresholds. Normal operation resumes once these signals rise above their thresholds. The Power-On Ready (POR) signal is generated when each signal reaches their valid logic level. When the POR is asserted the Soft-Start sequence starts. All the UVLO comparators except the enable circuit are disabled when enable is low to achieve the ultra-low power dissipation.

5.4 Clock Generator

The integrated clock generator's switching frequency is programmed with an external resistor (402K Ω typical) connected from the RT pin to GND. The MuxCapacitor switching frequency (Fsw) is calculated as:

$$F_{sw} \text{ (kHz)} = 38,190 / \text{External RT Resistor (Kohms)}$$

This clock signal can be synchronized to an external clock by using the EXTCLK pin. Switching activity at the EXTCLK pin enables the internal synchronizer. When the synchronizer is enabled (EXTCLKSEL = 1), the MuxCapacitor clock will track the EXTCLK pin switching rate. As the EXTCLK pin frequency slows down, the MuxCapacitor clock slows down. The EXTCLK signal is derived from the external POL's switch drive signal. This allows the MuxCapacitors to save power as the external switcher slows down due to reduced load demand. The MuxCapacitor switching frequency is $\frac{1}{4}$ the EXTCLK frequency.

5.5 Thermal Shutdown

Temperature sensing is included and provides the signal to an over temperature detector. The trip threshold is set to 145°C. When trip threshold is exceeded, thermal shutdown turns off the MuxCapacitor outputs and resets the internal soft start.

The restart is automatically initiated when the sensed temperature drops down within the normal operating range. A 20°C hysteresis is incorporated into the thermal shutdown threshold. The thermal shutdown circuit is disabled when enable is low to achieve the ultra-low power dissipation.

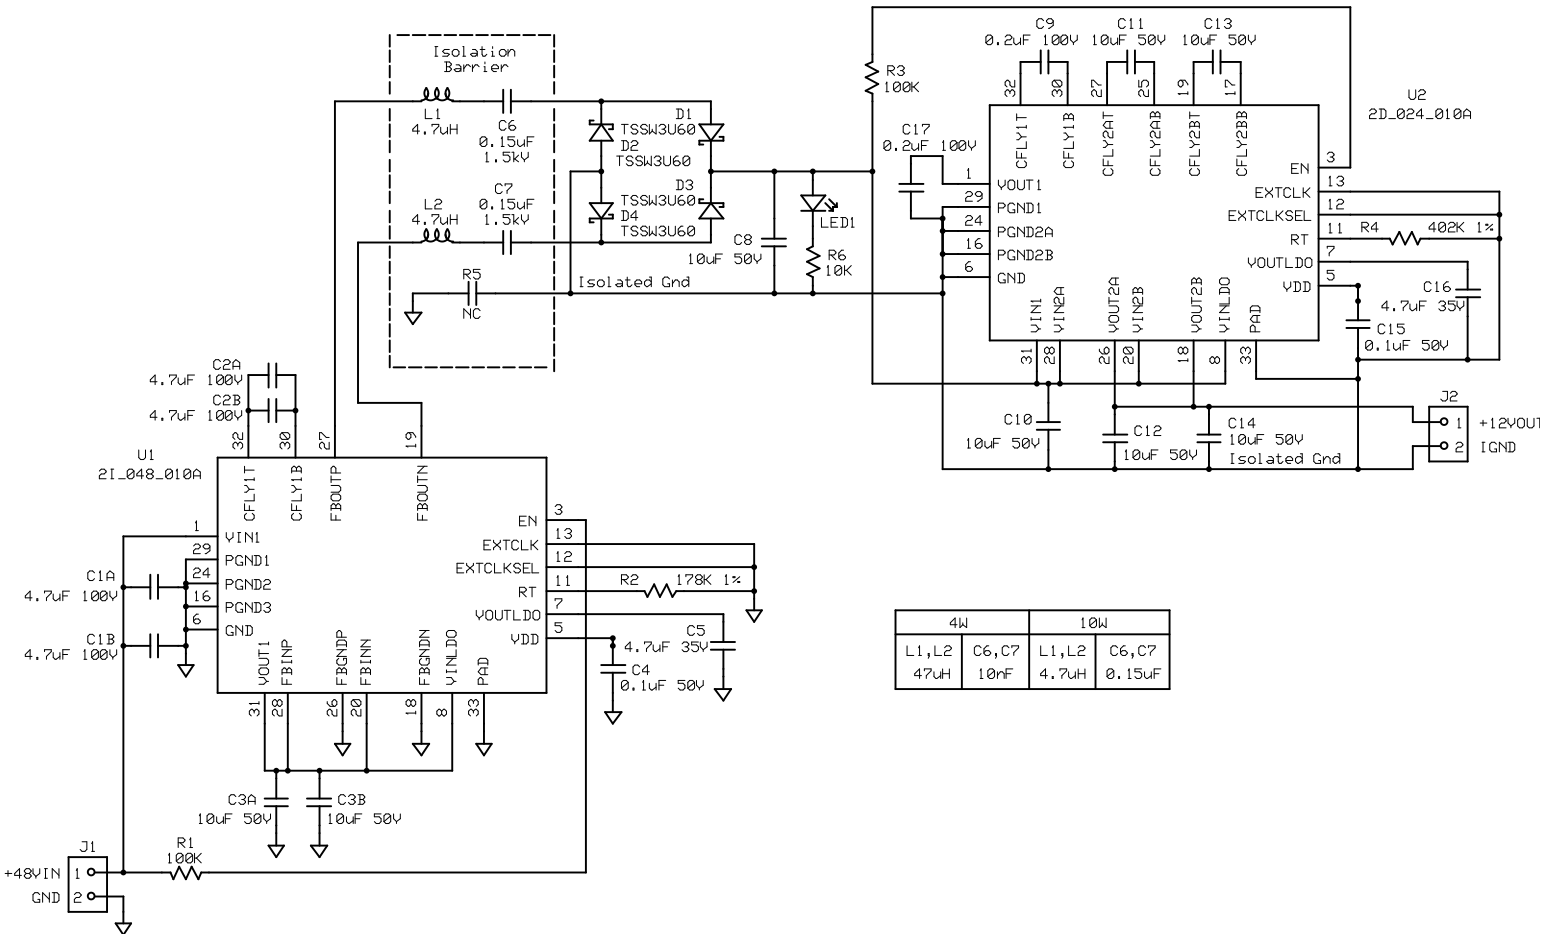

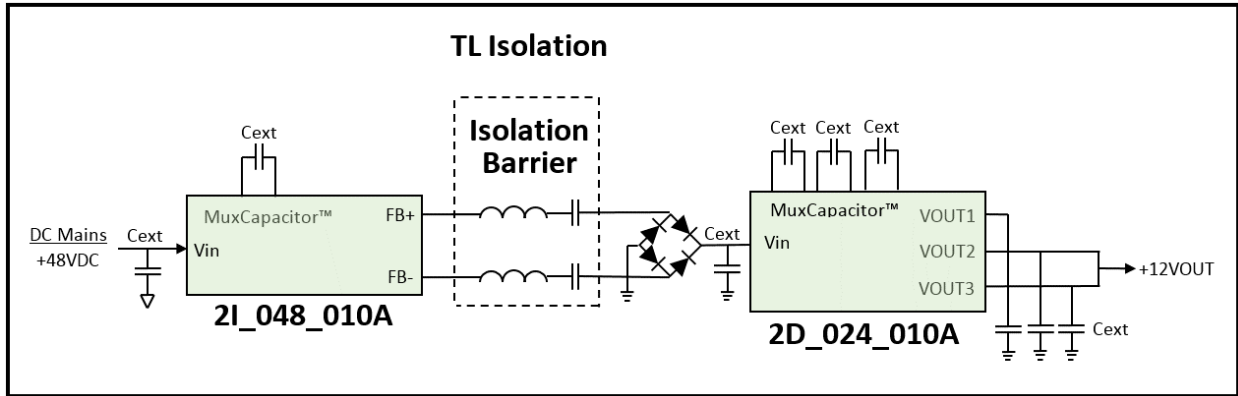

6 Reference System Application

The 2D_024_010A is typically paired with the 2I_048_10A to implement a transformerless isolated (TL) power supply. The following system diagrams provide 10W TL application schematics. The 2D_024_010A is shown as a simple DC-DC voltage reduction circuit on the secondary side of the safety barrier isolation interface. Two MuxCapacitor stages are wired in parallel to perform a $G=1/2$ voltage reduction and improved efficiency. The third MuxCapacitor boosts the input voltage for the internal high side gate drivers and can be tapped for 48V power. While the total power drawn from the 2D_024_010A cannot exceed 10W where $P_{out} = P_{out2A} + P_{out2B}$, each MuxCapacitor cell has a maximum output current. The I_{out_max} for VOUT1 cannot exceed 0.1A. The I_{out_max} for VOUT2A and VOUT2B cannot exceed 1A individually. The last two stages are 180° out of phase to reduce ripple.

The MuxCapacitor can be reconfigured as a push/pull driver. This configuration is utilized in the 2I_48_010A's full bridge driver. Additionally, the push/pull configuration is employed to generate a negative voltage as shown in the MxC 273 schematic.

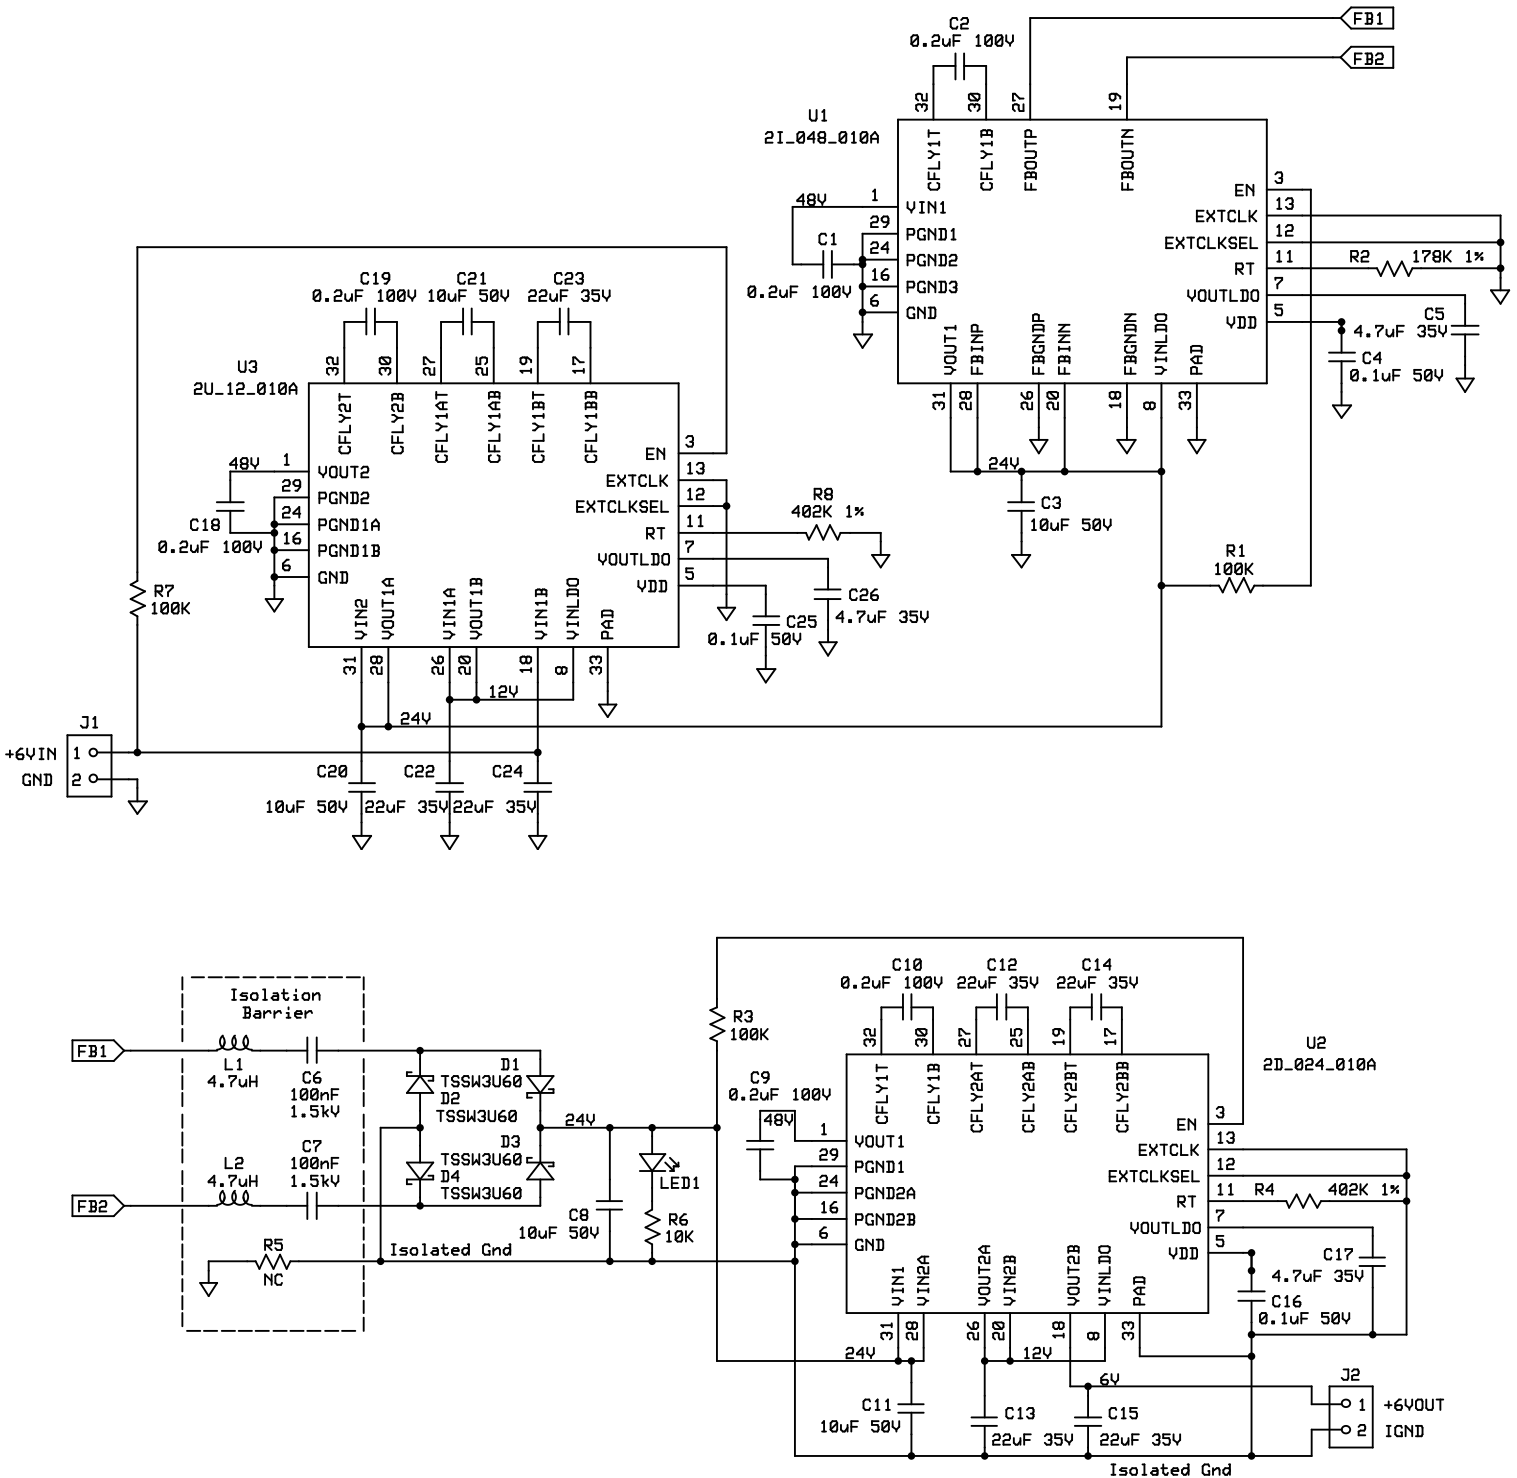

Efficiency and delivered power are dependent on application circuit implementation, capacitor components, RT frequency and thermal management. Consult the factory for additional design information.

7 Package Drawings

The available packages for the 2D_024_010A are shown in the following drawings.

7.1 QFN32 Package

The 2D_024_010A is packaged in a 32-pin 5mm x 5mm QFN package as shown below.

Figure 7: 2D_024_010A QFN32 Package Drawing

7.2 Wire-bond Die

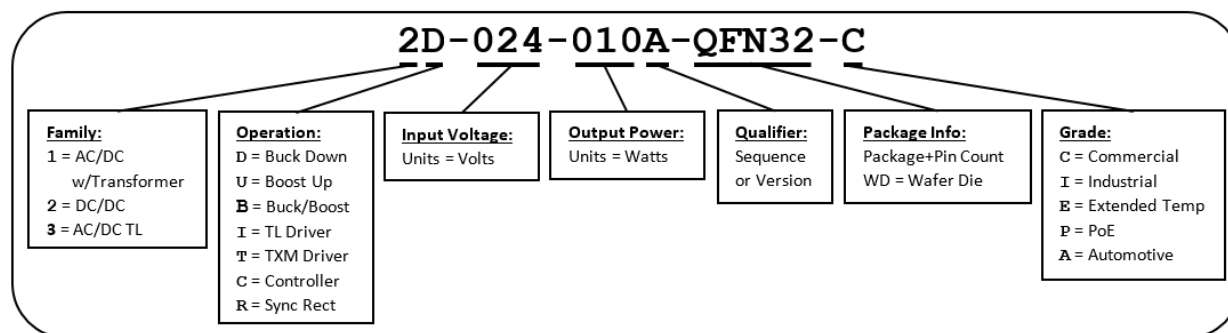

The 2D_024_010A is available in die form. Please contact factory for information regarding die sales.

8 Ordering Information

Refer to the following table for package option ordering information.

Table 5: 2D_024_010A Ordering Information

Part Number	Description	Package
2D-024-10A-QFN32-1	32 pin 5mm x 5mm QFN	QFN
2D-024-10A-WD-1	Wire Bond Die	Die
MxC 270-EB-1	48V to 12V Unregulated TL Evaluation Board	Eval Board
MxC 271-EB-1	6V to 6V Unregulated TL Evaluation Board	Eval Board
MxC 273-EB-1	48V to 5V Regulated TL Evaluation Board	Eval Board

This product is covered by one or more Helix Semiconductors patents.
