

Panasonic ideas for life

Your Simple, Accurate and Economical Temperature Controller Compact temperature controller (DIN 48×24) that can support pattern control Additions to KT2 series

KT Temperature Controller

Broad lineup of temperature controllers allow you to satisfy application and space requirements.

Compliance with RoHS Directive

FEATURES

1. Multi-input

Versatile thermocouple, RTD, DC voltage and DC current input for temperature detecting sensors

2. Simple operation enables highly accurate temperature control

All required operations can be enabled by the front keys and highly accurate PID control mode ensures an input span of $\pm 0.2\%$.

3. DIN Rail mounting types are aligned taking global market demand into consideration

The KT7 series is equipped with DIN rail mounting complying to DIN standards. Furthermore, because its control panel is compact, the KT7 saves space.

4. Nine step pattern control possible.

For KT2 series, despite DIN 48 × 24 size, selection is possible of control with fixed set point and nine step pattern control.

5. Meets market demands for costeffectiveness

The KT series offers both economy and high performance.

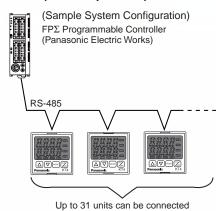

6. The KT series complies with UL, CSA standards and CE marking.

7. Improved visibility and ease of operation

More compact than before

The KT4H/KT4B series features the largest PV digit size in the industry. Visibility is improved with an 11-segment display. Connectable to a PC, it offers a full range of control and communication functions.

8. Communication specification uses RS485 (Modbus protocol)

*In the configuration above, the FP Σ requires a

communication cassette (FPG-COM3).
*Modbus is a communication protocol developed for

PLCs by Modicon Inc.

PRODUCT TYPES

1. KT2 Series

Base model	Power supply	Sensor input	Control output	Alarm output	Heating/ cooling control	Heater burnout alarm	Commu- nication function	Description	
AKT2								48 × 24 × 98.5mm	
	1							100 to 240V AC	Must be
	2							24V AC/DC	specified
		1						Multi-input (Thermocouple, RTD, DC current and DC voltage	e)
			1					Relay contact output 1a 3A 250V AC	N4
			2					Non-contact voltage output (for SSR drive)	Must be specified
			3					Current output	Specified
		·		2	0	0	Blank	When both heating/cooling and communication functions at Relay contact output (alarm 1): Can be used Open collector output (alarm 2): Can be used	re not added:
				1	1	0	Blank	When only heating/cooling function is added: Relay contact output (alarm 1): Cannot be used Open collector output (alarm 2): Can be used	
				1	0	0	1	When only communication function is added: Relay contact output (alarm 1): Can be used Open collector output (alarm 2): Cannot be used	
				0	1	0	1	When both heating/cooling and communication functions at Relay contact output (alarm 1): Cannot be used Open collector output (alarm 2): Cannot be used	e added:

^{*}When heating/cooling is selected, alarm output 1 cannot be used.
When the communication function is selected, alarm output 2 cannot be used.

Part No

(Ex) Part No. when the optional functions (of Heating/Cooling control: relay contact output + Communications function) is added on to the basic model are as follows; Part No.: AKT21110101

Options

Product name	Part No.
Shunt resistor (for Current input)	AKT4810
Terminal cover	AKT2801

Note: When Current input is specified, a shunt resistor (sold separately) is required.

2. KT4 Series

Base model	Power supply	Sensor input	Control output	Alarm output	Heating/ cooling control	Heater burnout alarm	Commu- nications function	Description
AKT4								48 × 48 × 95mm
-	1							100 to 240V AC
	2							24V AC/DC
		1						Multi-input (Thermocouple, RTD, DC Voltage and DC Current)
			1					Relay contact output 1a 3A 250V AC
			2					Non-contact voltage output (for SSR drive)
			3					Current output
				1				Relay contact output 1a (Alarm output 1)
				2				Relay contact output 1a (Alarm output 2)
					0			Not available
					4			SSR output 0.3A 250V AC (Heating/Cooling control not supported when 2 alarm output points are selected)
						0		Not available
						1		5A (Heater burn-out alarm not supported when control output is current output type/not supported when heating and cooling control is selected)
						2		10A (Heater burn-out alarm not supported when control output is current output type/not supported when heating and cooling control is selected)
						3		20A (Heater burn-out alarm not supported when control output is current output type/not supported when heating and cooling control is selected)
						4		50A (Heater burn-out alarm not supported when control output is current output type/not supported when heating and cooling control is selected)
								Not available
							1	Available

Notes: 1. CT1 or CT2 for current detection is provided as an accessory when heater burn-out alarm function is added.

2. Event output will be shared if you choose alarm output 2 and the heater burnout alarm.

• Part No.

(Ex) Part No. when the optional functions (of Heating/Cooling control: SSR output + Communications function) is added on to the basic model are as follows; Part No.: AKT41111401

Options

Product name	Part No.			
Shunt resistor (for Current input)	AKT4810			
Terminal cover	AKT4801			

Note: When Current input is specified, a shunt resistor (sold separately) is required.

3. KT8 Series

Base model	Power supply	Sensor input	Control output	Alarm output	Heating/cool- ing control	Heater burn- out alarm	Communica-	Description
AKT8		Мран		оспрои				48 × 96 × 98.5mm
	1							100 to 240V AC
	2							24V AC/DC
		1						Multi-input (Thermocouple, RTD, DC Voltage and DC Current)
			1					Relay contact output 1a1b 3A 250V AC
			2					Non-contact voltage output (for SSR drive)
			3					Current output
				1				Relay contact output 1a (Alarm output 1)
				2				Relay contact output 1a (Alarm output 2)
					0			Not available
					1			Relay contact output 1a
					2			Non-contact voltage output (for SSR drive)
					3			Current output
						0		Not available
						1		5A (Heater burn-out alarm not supported when control output is current output type/not supported when heating and cooling control is selected)
						2		10A (Heater burn-out alarm not supported when control output is current output type/not supported when heating and cooling control is selected)
						3		20A (Heater burn-out alarm not supported when control output is current output type/not supported when heating and cooling control is selected)
						4		50A (Heater burn-out alarm not supported when control output is current output type/not supported when heating and cooling control is selected)
								Not available
							1	Available

Notes: 1. CT1 or CT2 for current detection is provided as an accessory when heater burn-out alarm function is added.

Part No.

(Ex) Part No. when the optional functions (of Alarm output; Alarm output 2 + Heating/Cooling control: Current output) are added on to the basic model are as follows; Part No.: AKT8111230

Options

Product name	Part No.
Shunt resistor (for Current input)	AKT4810
Terminal cover	AKT8801

Note: When Current input is specified, a shunt resistor (sold separately) is required.

4. KT9 Series

Base model	Power supply	Sensor input	Control output	Alarm output	Heating/cool- ing control	Heater burn- out alarm	Communica- tions function	Description
AKT9								96 × 96 × 98.5mm
	1							100 to 240V AC
	2							24V AC/DC
		1						Multi-input (Thermocouple, RTD, DC Voltage and DC Current)
			1					Relay contact output 1a1b 3A 250V AC
			2					Non-contact voltage output (for SSR drive)
			3					Current output
				1				Relay contact output 1a (Alarm output 1)
				2				Relay contact output 1a (Alarm output 2)
					0			Not available
					1			Relay contact output 1a
					2			Non-contact voltage output (for SSR drive)
					3			Current output
						0		Not available
						1		5A (Heater burn-out alarm not supported when control output is current output type/not supported when heating and cooling control is selected)
						2		10A (Heater burn-out alarm not supported when control output is current output type/not supported when heating and cooling control is selected)
						3		20A (Heater burn-out alarm not supported when control output is current output type/not supported when heating and cooling control is selected)
						4		50A (Heater burn-out alarm not supported when control output is current output type/not supported when heating and cooling control is selected)
								Not available
							1	Available

Notes: 1. CT1 or CT2 for current detection is provided as an accessory when heater burn-out alarm function is added. 2. If a communication function is added, second main setup is not possible

• Part No.

(Ex) Part No. when the optional functions (of Alarm output; Alarm output 2 + Heating/Cooling control: Non-contact voltage output) are added on to the basic model are as follows; Part No.: AKT9111220

Options

Product name	Part No.
Shunt resistor (for Current input)	AKT4810
Terminal cover	AKT9801

Note: When Current input is specified, a shunt resistor (sold separately) is required.

^{2.} If a communication function is added, second main setup is not possible

KT (AKT2,4,7,8,9,4H,4B)

5. KT7 Series

Base model	Power supply	Sensor input	Control output	Alarm output	Heating/ cooling control	Heater burnout alarm	Commu- nications function	Description
AKT7								22.5 × 75 × 100mm
	1							100 to 240V AC
	2							24V AC/DC
		1						Multi-input (Thermocouple, RTD, DC Voltage and DC Current)
			1					Relay contact output 1a 3A 250V AC
			2					Non-contact voltage output (for SSR drive)
			3					Current output
		· '		1				Open collector output (Alarm output 1)
					0			Not available (without Heating/Cooling function)
						0		Not available
						1		5A (not available for the Current output type) Open collector output
						2		10A (not available for the Current output type) Open collector output
						3		20A (not available for the Current output type) Open collector output
						4		50A (not available for the Current output type) Open collector output
								Not available
							1	Available

Note: CT1 or CT2 for current detection is provided as an accessory when heater burn-out alarm function is added.

• Part No.

(Ex) Part No. when the optional function (of Heater burnout alarm: 10A) is added on to the base model are as follows; Part No.: AKT7111102

Options

Product name	Part No.
Shunt resistor (for Current input)	AKT4811

Note: When Current input is specified, a shunt resistor (sold separately) is required.

6. KT4H Series

Base	Power	Sensor	Control	Alarm	Heating/	Heater	Commu-	D
model	supply	input	output	output	cooling control	burnout alarm	nications function	Description
AKT4H								
	1							100 to 240V AC
	2							24V AC/DC
		1						Multi-input (Thermocouple, RTD, DC Voltage and DC Current)
			1					Relay contact
			2					Non-contact voltage (for SSR drive)
			3			0		DC current Heater burn-out alarm not possible.
				1				1 point (1a)
				2	0			2 points (1a + 1a) Heating/cooling control output not possible.
					0			Not available
					1	0		Relay contact Heater burn-out alarm not possible.
					2	0		Non-contact voltage (for SSR drive) Heater burn-out alarm not possible.
						0		Not available
			1 or 2		0	3		Single phase 20A (Heater burn-out alarm not supported when control output is DC output type/not supported when heating and cooling control is selected)
			1 or 2		0	4		Single phase 50A (Heater burn-out alarm not supported when control output is DC output type/not supported when heating and cooling control is selected)
			1 or 2		0	5		Three phase 20A (Heater burn-out alarm not supported when control output is DC output type/not supported when heating and cooling control is selected)
			1 or 2		0	6		Three phase 50A (Heater burn-out alarm not supported when control output is DC output type/not supported when heating and cooling control is selected)
							Blank	Not available
							1	Serial communication RS-485
							2	Contact input

Notes: 1. CT1 or CT2 for current transformer is provided as an accessory when heater burn-out alarm function is added.

2. Under some conditions, option functions (shaded items) may not be available; please check the "Descriptions" of the above table for non-functioning circumstances.

• Part No.

(Ex) Part No. when the optional functions (Heating/Cooling control + communication function) are added on to the basic model are as follows; Part No.: AKT4H1111101

COMMUNICATION FUNCTION OVERVIEW

Item	Specification						
liem	KT2, 4, 8, 9, 7	KT4H/4B					
Communication type	Half-duplex						
Communication speed	Select 2400, 4800, 9600, or 19200 bps using key operation.						
Synchronization type	Asynchronous						
Protocol	Modbus	Modbus RTU, Modbus ASCII, MEWTOCOL (Slave)					
Coding	ASCII Binary/ASCII						
Error correcting	Command re-send						
Error detection	Parity check, check sum						
Data structure	Start bit: 1, Data bit: 7, Parity: Even parity, Stop bit: 1						
Interface	EIA RS485 compliant						
No. of nodes	31	31					
Maximum cable length	1,000 m (cable resistance must be within 50Ω)						

Note: That main setting No. 2 will not be possible on the KT8 and KT9 when the communications functions is added.

PARTS AND FUNCTIONS

1. KT2 series

(1) PV/SV display (red): Indicates the input value and setting value. During setting mode, characters

and setting value of the setting item are indicated in turn.

2 MEMO/STEP display (green): Indicates memory number during fixed value control. Indicates step number

during program control.

3 PV indicator (red): Lights up when the input value (PV) is indicated. 4 SV indicator (green): Lights up when main setting value (SV) is indicated.

(5) AT indicator (yellow): Flashes during AT (auto-tuning).

(6) T/R indicator (yellow): Flashes during serial communication (Lit while sending data, Unlit while

receiving data)

Lights up when control output or OUT1 (Heating side, option Heating/Cooling 7 OUT indicator (green):

control) is ON. (For DC current output type, it flashes corresponding to the manipulated variable in a $0.25~{\rm second}$ cycle)

8 EV1 indicator (red): Lights up when Event output 1 or OUT2 (Cooling side, option Heating/Cooling

control) is ON.

9 EV2 indicator (red): Lights up when Event output 2 is ON.

10 Increase key (\triangle): Increases the numeric value. 1 Decrease key (∇): Decreases the numeric value.

Selects the setting mode or registers the setting value. 12 Mode key (MODE): (By pressing the Mode key, the setting value or selected value can be

③ OUT/OFF key (): The control output OUT/OFF or program control RUN/STOP can be switched.

2. KT4 series

3. KT8 series

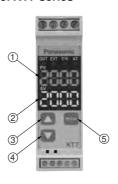

- 1) PV display Indicates PV (process variable).
- 2 SV display Indicates SV (setting value).
- ③ Increase key Increases numerical value.
- 4 Decrease key Decreases numerical value.
- Mode key Switches the setting mode.
- 6 OUT/OFF key Control output is turned on or off when control output is ON.

4. KT9 series

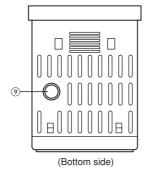

Note: Color selection is the same for each size.

5. KT7 series

6. KT4H/4B series

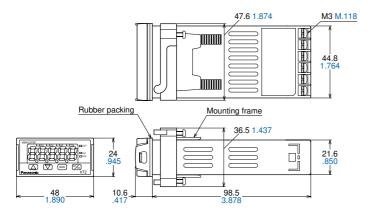

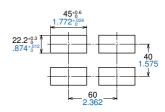

- 1) Action indicators (backlight: orange)
 - °F °C Lights respectively when temperature unit °F/°C is selected. T/R Lights during Serial communication (option) TX output.
 - AT Flashes during auto-tuning or auto-reset
 - OUT1 Lights when control output is ON or Heating output (option) is
 - ON.
 - For DC current output type, it flashes corresponding to the
 - manipulated variable in 0.25 second cycles.
 - OUT2 Lights when Cooling output (option) is ON. EVT1 Lights when Alarm 1 output is ON.
 - EVT2Lights when Alarm 2 output (option) is ON or Heater burnout
 - alarm (option) is ON.
- LOCK Lights when Lock 1, Lock 2 or Lock 3 is selected. ② MEMO display Indicates the set value memory number (backlight: green).
- ③ PV display Indicates the PV (process variable) (backlight: red/orange/green).
- ④ SV display Indicates the SV (set value) (backlight: green).
- ⑤ Mode key Selects the setting mode, and registers the set value. 6 OUT/OFF key The control output ON/OFF or Auto/Manual control can be
- switched.
- 7 Increase key Increases the numeric value.
- ® Decrease key Decreases the numeric value.
- Tool connector By connecting the tool cable, the following operations can be conducted from the external computer using the exclusive tool
 - Reading and setting of SV, PID and various set values from external computer
 - Reading of PV and action status
 - Function change

DIMENSIONS (unit: mm inch) Tolerance: ±1 ±.039

- 1. KT2 series
- External dimension

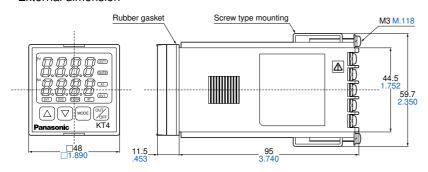

· Panel cutout

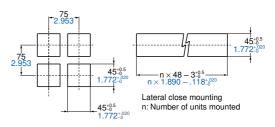

Note: The communications terminal is the screw terminal on the back of the unit.

2. KT4 series

External dimension

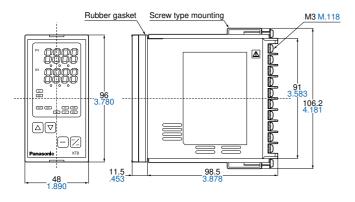

Panel cutout

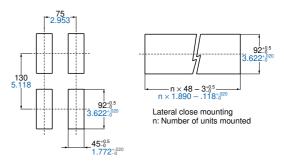

Note: The communications terminal is the screw terminal on the back of the unit.

3. KT8 series

External dimension

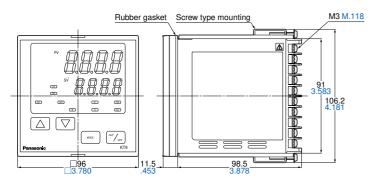

Panel cutout

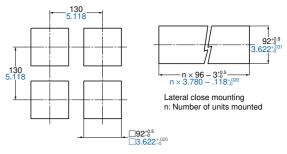

Note: The communications terminal is the screw terminal on the back of the unit.

4. KT9 series

External dimension

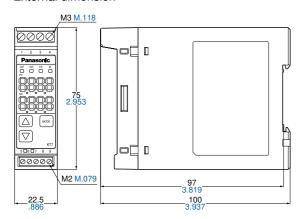

Panel cutout

Note: The communications terminal is the screw terminal on the back of the unit.

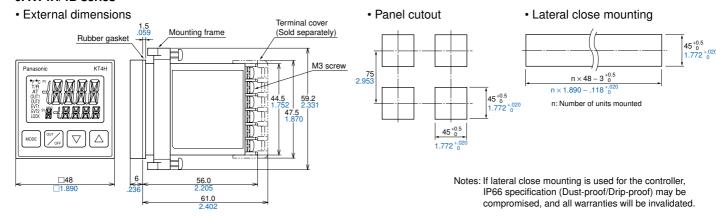

5. KT7 series

• External dimension

Note: The communications terminal is the modular jack on the bottom of the unit.

6. KT4H/4B series

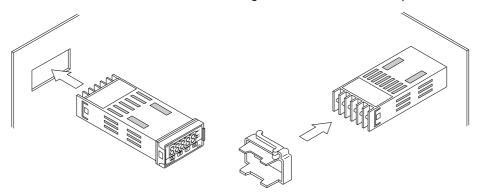

INSTALLATION

1. KT2 series

Please install vertically in order to satisfy the IP66 specification for dust and splash proofing.

The possible control panel plate thickness for installation is between 1 to 10 mm.

- (1) Insert the unit from the front of the control panel.
- (2) Insert the mounting frame until that the edges (2) make contact with the panel.
- (3) Tighten the clamp screw and then turn it 3/4 of a turn after the edge of the screw reaches the panel.

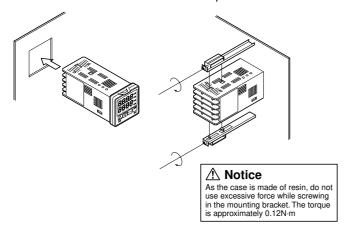

2. KT4, 7, 8, 9 series

· Panel Mounting

Mountable panel thickness: Within 1 to 15mm .039 to .591inch Insert a controller from the front side of the panel.

Attach the mounting brackets by the holes at the top and bottom of the case and secure the controller in place with the screws.

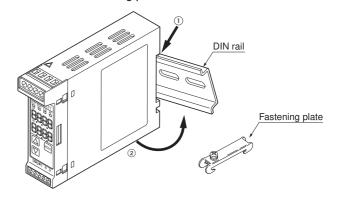

• DIN rail mounting (KT7)

- 1) Hook ① of the KT7 on the upper side of the DIN rail.
- 2) Making the 1 part of the KT7 as a support, fit the lower part of the KT7 to the DIN rail.

KT7 will be completely fixed to the DIN rail with a "Click" sound. Recommended DIN rail: Part No. ATA48011

Recommended fastening plate: Part No. ATA4806

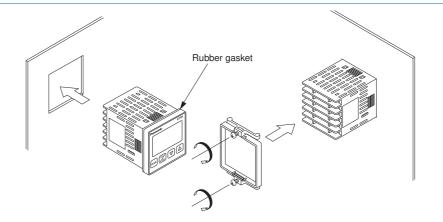

3. KT4H/4B series

Please install vertically in order to satisfy the IP66 specification for dust and splash proofing.

The possible control panel plate thickness for installation is between 1 to 5

- 1) Insert the unit from the front of the control panel.
- 2) Push the installation frame fully into contact with the panel and tighten the screws (screw torque from 0.05 N·m to 0.06N·m).

OPTION

1. Shunt resistor

AKT4810 (for KT2, 4, 8, 9, 4H and 4B)

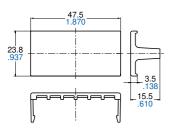

AKT4811 (for KT7)

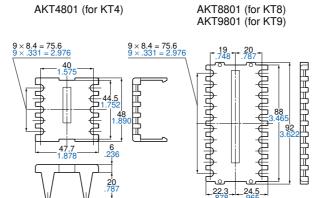

2. Terminal cover

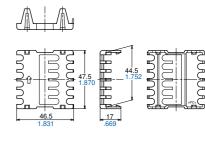

AKT2801 (for KT2)

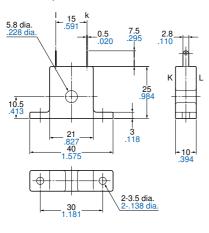

AKT4H801 (for KT4H/4B)

Note: 2pcs of terminal cover of AKT8801 can be used as an AKT9801 cover.

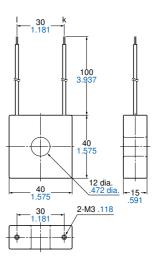

3. Current transformer (CT)

- External dimension
- 1) CT1 (for 5,10 and 20A)

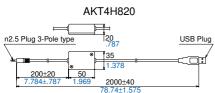

Note: CT1 or CT2 for current detection is provided as an accessory when heater burn-out alarm function is added.

2) CT2 (for 50A)

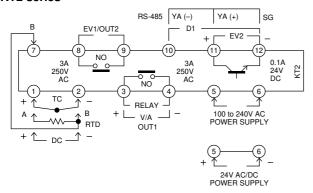

4. Tool cable

EXTERNAL CONNECTION DIAGRAM

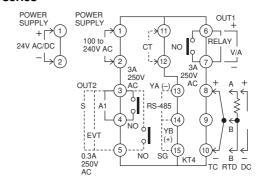

1. KT2 series

- TC: Input terminal for thermo couple.
- RTD: Input terminal for the resistance temperature sensor
 DC: Input terminal for DC current or DC voltage.
- For DC current input, connect a separately sold receipt resistor (50Ω) between the input terminals.
- OUT1: Output terminal for the control output or heating output [option: heating/cooling control].
 POWER SUPPLY: Power supply terminal.
- EV1/OUT2: Output terminal for event output 1 or cooling output [option: heating/cooling control].
 EV2: Output terminal for event output 2.
- DI: Input terminal for DI input. (There are three types of D1 input, the SV1/SV2 external switching function, the OUT/OFF (RUN/STOP) output switching function, and timer function.)

 RS-485: Communication terminal for serial communication. (EV1, 2 is alarm output)

2. KT4 series

- POWER SUPPLY: Power supply
- OUT1: Control output 1 (heat output)
- OUT2: Control output 2 (cooling output)
- · RELAY: Relay contact output
- V/A: DC voltage output/direct current output
 V: Contactless relay output
- · A1: Alarm 1 output
- EVT: Event output (A2 output and heater cutoff alarm output)
- CT: CT input TC: Thermocouple
- RTD: Resistance temperature detection
- DC: Direct current or DC voltage
- RS-485: Serial communications

3. KT8 and KT9 series

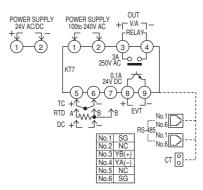

- POWER SUPPLY: Power supply
 • OUT1: Control output 1
- OUT2: Control output 2 (cooling output)
- RELAY: Relay contact output
 V/A: DC voltage output/direct
- current output

 A1: Alarm 1 output
- A2: Alarm 2 output
 HB: Heater cutoff alarm
- output
 SV2: Second main setup
- CT: CT input TC: Thermocouple
- RTD: Resistance temperature detection
- DC: Direct current or DC voltage
- RS-485: Serial
- communications

Note: That main setting No. 2 will not be possible on the KT8 and KT9 when the communications functions is added.

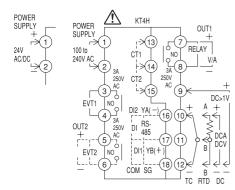

4. KT7 series

- POWER SUPPLY: Power supply
- OUT: Control output
- · RELAY: Relay contact output
- V/A: DC voltage output/direct current output
- EVT: Event output
- [Alarm, loop fault alarm or heater cutoff alarm (optional)]
- TC: Thermocouple
- RTD: Resistance temperature detection
- DC: Direct current or DC voltage
- RS-485: Serial communications
 CT: CT input

POWER SUPPLY Power supply

5. KT4H/4B series

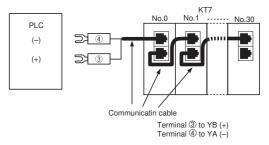

EVT1	Alarm 1 output
EVT2	Alarm 2 output (option) or heater burn-out
	Alarm output (option)
OUT1	Control output or heating output (option)
OUT2	Cooling output (option)
TC	Thermocouple input
RTD	Resistance temperature detection input
DC	Direct current input (DCA) or DC voltage input (DCV)
	(For DC voltage input, + side terminal number differs depending on the voltage.
	Also, DC current input, connect s shunt resistor between No. 10 and 12 terminal.)
CT1	Current transformer input 1 (option: Single, three phase)
CT2	Current transformer input 2 (option: Three-phase)
DI	Contact input (option)
RS-485	Serial communication RS-485 (option)

Communication Function Connection Diagram (PLC Connection Diagram)

2. KT7 series

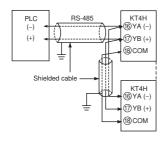

Notes: 1. Terminating Resistors (Terminators)

The KT series has a built-in pull-up resistor or pull-down resistor, which serves as the terminating resistor. For this reason, do not connect the terminating resistor on the communication line.

Please use a RJ-116 polarized type modular connector.Please use a cable that is suitable for a modular connector.

3. KT4H/4B series

Notes:

- 1. To prevent current flow along shield sections, ground one end of the shield line. (If both ends of the shield section are grounded, a closed circuit with the earth will form and electricity flowing through the shield line will cause increased susceptibility to noise.)
- Terminating Resistors (Terminators)
 The KT4H series has a built-in pull-up resistor or pull-down resistor. For this reason, do not connect the terminating resistor on the communication line.

NOTICE ON OPERATION

1. NOTICE ON SITE SELECTION

This instrument is intended to be used in the following environment (IEC61010-1) Overvoltage category II, Pollution degree 2

Mount the controller in a place with:

- 1) A minimum of dust, and an absence of corrosive gases
- 2) No flammable, explosive gases
- 3) Few mechanical vibrations or shocks
- 4) No exposure to direct sunlight, an ambient temperature of 0 to 50°C (32 to 122°F) that does not change rapidly (When installing inside a panel, make particular allowance for heat dissipation. Avoid installation in situations such as above equipment that generates heat.) 5) Locations in which temperature rapidly changes may cause condensation.
- 6) Locations or atmospheres in which gasoline, thinners, alcohol, or other organic solvents are present, or in which ammonia, sodium hydroxide, or other strong alkaline substances may adhere.
- 7) Locations susceptible to direct impact or the transmission of vibrations, or where splashing with water is possible.

 8) In the proximity of equipment in which
- 8) In the proximity of equipment in whic large switching surges occur or near high-voltage cables, high-voltage equipment, power lines, power equipment, ham radio transmitters, or equipment containing these or similar devices.

- 9) An ambient non-condensing humidity of 35 to 85%RH
- 10) No large capacity electromagnetic switches or cables through which large current is flowing
- 11) No water, oil or chemicals or where the vapors of these substances can come into direct contact with the controller

2. NOTICE ON THE WIRING

1) The terminal block of KT4, 8, 9, 4H, 4B series are designed to be wired from the left side (KT2 series are designed to be wired from the upper and lower direction). The lead wire must be inserted from the left side of the terminal, and fastened by the terminal screw. Use a solderless terminal with insulation sleeve that fits to the M3 screw.

	Wire- pressed terminal	Company name	Part number	Fastening torque
	Early type	NICHIFU Co., Ltd.	1.25Y-3	
Ro	Fork type	J.S.T. Mfg. Co., Ltd.	VD1.25-B3A	0.6 N·m, Max.
	Round	NICHIFU Co., Ltd.	1.25-3	1.0 N·m.
	type	J.S.T. Mfg. Co., Ltd.	V1.25-3	

2) Terminal fastening torque is approximately 0.6N·m to 1.0N·m (KT4, 8, 9, 4H and 4B).

For KT7 series by M3.0 screw is less than 0.5N·m and by M2.0 screw 0.25N·m respectively.

- 3) Use a thermocouple and compensating lead wire according to the input specification of the controller.
- 4) Use a 3-wire system of RTD according to the input specification of the controller.
- 5) This controller has no built-in power switch, circuit breaker or fuse. Therefore, it is necessary to install them in the circuit near the external controller.

(Recommended fuse: Time-lag fuse, rated voltage 250V AC, rated current 2A) 6) In the case of 24V AC/DC power supply, do not confuse the polarity when it is DC

- 7) With the relay contact output type, use an auxiliary electromagnetic switch externally according to the capacity of the load to protect the built-in relay contact.
- 8) When wiring, keep input wire (thermocouple, RTD, etc.) away from AC source and load wire to avoid external interference.
- 9) Turn the power supply to the instrument off before wiring or checking. Working or touching the terminal with the power switched on may result in Electric Shock which could cause severe injury or death.

KT (AKT2,4,7,8,9,4H,4B)

- 10) Do not drop wire chips into the holes of vent when wiring, because they could cause fire, malfunction or trouble with the device.
- 11) To prevent the unit from harmful effects of unexpected high level noise, it is recommended that a surge absorber be installed between the electromagnetic switch coils.

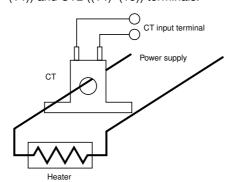

3. NOTICE ON THE MOUNTING

- 1) Do not use excessive force while screwing in the mounting bracket of KT4, 8, 9, 4H and 4B series. For KT4, 8 and 9 series, recommended torque is approximately 0.12N·m. For KT4H and 4B, recommended torque is approximately 0.05 to 0.06 N·m.
- 2) When mounting the KT7 series to the DIN rail, mount it in a lateral direction. Make sure a click is audible when fixed into place.

4. OPTIONAL HEATER BURN-OUT ALARM OUTPUT (KT4, 7, 8, 9, 4H and 4B series)

1) This alarm is not available for detecting current under phase control.

- 2) Use the current transformer (CT) provided, and pass one lead wire of the heater circuit into the hole of CT.
- 3) When wiring, keep CT wire away from AC source and load wire to avoid external interference.
- 4) In three phase installations, ensure that R, S, and T are each connected to a 2-line CT that connects with CT1 ((13)–(14)) and CT2 ((14)–(15)) terminals.

5. Please use rod terminals for the terminal portion of the KT7 series.

We recommend terminals made by Phoenix Contact.

- (1) to (4) are Al0.25–8YE, Al0.34–8TQ, Al0.5–8WH, Al0.75–8GY, Al1.0–8RD, and Al1.5–8BK.
- (5) to (9) are Al0.25–8YE, Al0.34–8TQ, and Al0.5–8WH.

The screw tightening torque for (1) to (4) should be no more than $0.5 \text{ N} \cdot \text{m}$ and for (5) to (9) it should be no more than $0.25 \text{ N} \cdot \text{m}$. Make sure no screw is loose.

KT Monitor

Available for download free of charge. Use it to acquire data from the KT series temperature controller.

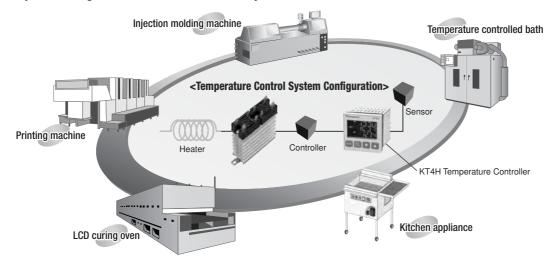

FEATURES

- 1. Parameters can be set from a computer.
- 2. Measurement data can be monitored from a computer.
- 3. Measurement data can be logged to a computer.

Download from http://www.panasonic-electric-works.net/ac

Applications

Contributing to space savings of various heater control systems
