

For Liquid & Gas

Head-separated Dual Display Digital Pressure Sensor

DPC-L100 SERIES DPH-L100 SERIES

DPC-L100 SERIES DPH-L100 SERIES

High-precision detection of fluid and air pressure

Allows high-precision fluid pressure management

The analog voltage output of the sensor head can achieve a high-precision sensing of $\pm 1\%$ F.S. (at a normal temperature of 23 °C 73.4 °F).

Oil-less single-layer diaphragm

Oil is not encapsulated in the diaphragm of the pressure sensing portion. No need to worry that oil will leak into the medium when the sensor head is damaged.

Compact stainless body

Compact size of HEX. 22 × 59 mm 0.866 × 2.323 in (excluding the screws). The body is also stainless so it can be used in various environments.

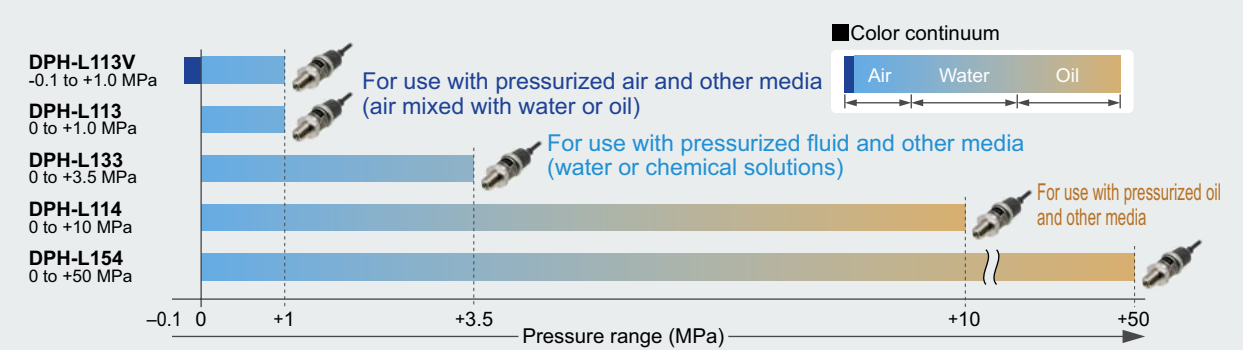

Strong against pressure surges from throttle loading

Controls pressure surges and reduces sensor failure.

Product line

APPLICATIONS

Transport of glass sheets after washing
(Air pressure with waterdrops)

Management of plastic filling
machine pressure
(Fluid pressure)

Management of press pressure
(Oil pressure)

The dual display means that the “current value” and the “threshold value”,
it makes direct setting of threshold value

Equipped with a 30 mm 1.181 in square compact-sized dual display. Because the current value and the threshold value can be checked at the same time, the threshold value can be set and checked smoothly without having to switch screen modes. ON/OFF operations are still carried out while the threshold values are being set, so setting to the same sensitivity as dial control-type sensors is possible. And naturally a key lock function is also equipped.

3-color display (Red, Green, Orange)

The main display changes color in line with changes in the status of output ON/OFF operation, and it also changes color while setting is in progress. The sensor status can therefore be understood easily, and operating errors can be reduced.

Equipped with new functions optimal for fluid pressure

Equipped with functions optimal for fluid pressure management while inheriting the operability of the **DP-100** series.

- Peak / Bottom hold (output-linked)

When output turns on (or off), the controller's digital display (current value) is reset and peak / bottom hold operation starts. For example, this functionality could be used to verify the peak pressure for an industrial press each time a workpiece is loaded.

- Current value hold

The controller's digital display (current value) is held while external input is on. By activating external input the moment you wish to capture the pressure value, you can pause and verify the display.

MOUNTING

Tight installation to panels is possible

An exclusive mounting bracket **MS-DP1-2** that is suitable for 1 to 6 mm 0.039 to 0.236 in panel thickness is available.

PRECAUTIONS FOR PROPER USE

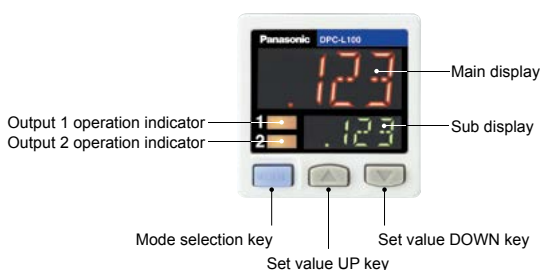

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.
- The **DPH-L100** series is designed for use with air and non-corrosive gas. It cannot be used with liquid or corrosive and inflammable gases.

Others

- Never remove the throttle.
- Use within the rated pressure range.
- Do not apply pressure exceeding the pressure withstandability value. The diaphragm will get damaged and correct operation shall not be maintained.
- Do not use during the initial transient time (controller: 0.5 sec. approx, sensor head: 50 ms approx.) after the power supply is switched on.
- Avoid dust, dirt, and steam.
- Take care that the sensor does not come in direct contact with water, oil, grease, or organic solvents, such as, thinner, etc.
- Do not insert wires, etc., into the pressure port. The diaphragm will get damaged and correct operation shall not be maintained.
- Do not operate the keys with pointed or sharp objects.

Part description

Wiring

- Make sure that the power supply is off while wiring.
- Verify that the supply voltage variation is within the rating.
- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- In case noise generating equipment (switching regulator, inverter motor, etc.) is used in the vicinity of this sensor, connect the frame ground (F.G.) terminal of the equipment to an actual ground.
- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.
- Incorrect wiring will cause problems with operation.
