

Features

- USB 3.0 compatible
- Full compliancy to USB 3.0 Super Speed standard
- One 5.0Gbps differential signal pairs
- Adjustable Receiver Equalization
- 100Ω Differential CML I/O's
- Pin Configured Output Emphasis Control
- Input signal level detect and squelch function
- Automatic Receiver Detect
- Host Mode Capable
- Low Power : 165mW
- Auto "Slumber" mode for adaptive power management
- Single Supply Voltage: 3.3V
- Packaging: 8-Pin TDFN 2 x 2 mm

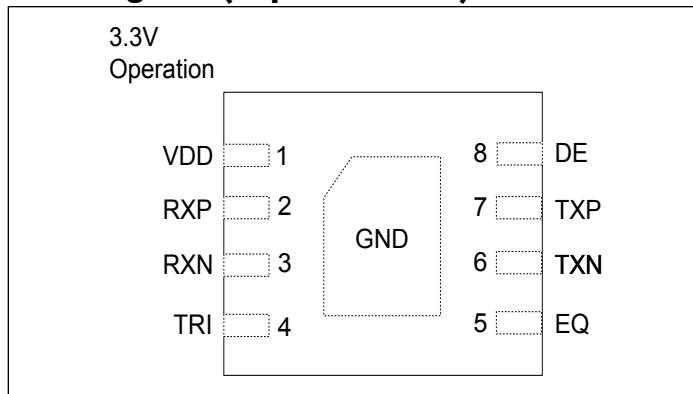

Description

Pericom Semiconductor's PI3EQX501B is a low power, high performance 5.0 Gbps signal ReDriver™ designed specifically for the USB 3.0 protocol. The device provides programmable equalization and De-Emphasis to optimize performance over a variety of physical mediums by reducing Inter-Symbol Interference.

PI3EQX501B supports one 100Ω Differential CML data I/O's between the Protocol ASIC to a switch fabric, over cable, or to extend the signals across other distant data pathways on the user's platform. The integrated equalization circuitry provides flexibility with signal integrity of the signal before the ReDriver. A low-level input signal detection and output squelch function is provided. The channels' input signal level determines whether the output is active.

The PI3EQX501B also includes a receiver detect function. The receiver detection loop will be active again if the corresponding channel's signal detector is idle for longer than 7.3mS. The channel will then move to Unplug Mode if load not detected, or it will return to Low Power Mode (Slumber Mode) due to inactivity.

Pin Description

Pin #	Pin Name	Type	Description
1	VDD	Power	3.3V power supply
2,3	RXP, RXN	Input	CML input channels. With Selectable input termination between 50Ω to internal Vbias or 60kΩ to ground.
4	TRI	Input	Set the state of chip; With internal 200kΩ pull-down resistor “High” means NO receiver termination detection and for debug mode. “Low” means normal operation mode with receiver termination detection.
5	EQ	Input	Set the equalization of the channels. Tri-level input pin. With internal 100kΩ pull-up resistor and 100kΩ pull-down resistor.
7, 6	TXP, TXN	Output	Selectable output termination between 50Ω to internal Vbias or 2kΩ to internal Vbias.
8	DE	Input	Set de-emphasis of output CML buffer. Tri-level input pin. With internal 100kΩ pull-up resistor and 100kΩ pull-down resistor.
Center Pad	GND	GND	Supply Ground.

Power Management

Notebooks, netbooks, tablets and other power sensitive consumer devices require judicious use of power in order to maximize battery life. In order to minimize the power consumption of our devices, Pericom has added an additional adaptive power management feature. When a signal detector is idle for longer than 1.3ms, the channel will move to low power mode.

In the low power mode, the signal detector will still be monitoring the input channel. If a channel is in low power mode and the input signal is detected, it will wake-up immediately. If a channel is in low power mode and the signal detector is idle longer than 6ms, the receiver detection loop will be active again. If load is not detected, then the Channel will move to Device Unplug Mode and monitor the load continuously. If load is detected, it will return to Low Power Mode and receiver detection will be active again per 6ms.

Configuration Table

Mode	Input R	Output R
Unplug mode	60kΩ to GND	2kΩ to V _{BIAS}
Slumber mode	50Ω to V _{BIAS}	2kΩ to V _{BIAS}
Active mode	50Ω to V _{BIAS}	50Ω to V _{BIAS}

Mode Adjustment

Equalization Setting:

EQ is the selection pin for the equalization.

Equalizer setting	
EQ	@ 2.5GHz
0	3 dB
open	6dB (Default)
1	9dB

De-emphasis Setting:

DE is the selection pin for the de-emphasis.

Output de-emphasis setting	
DE	De-emphasis
0	0 dB
open	-3.5 dB (default)
1	-6 dB

Maximum Ratings

(Above which useful life may be impaired. For user guidelines, not tested.)

Storage Temperature.....	-65°C to +150°C
Supply Voltage to Ground Potential.....	-0.5V to +4.6V
DC SIG Voltage.....	-0.5V to V _{DD} +0.5V
Current Output	-25mA to +25mA
Power Dissipation Continuous.....	1.0W
Operating Temperature.....	-40°C to +85°C
ESD, Human Body Model.....	-8kv to +8kV
ESD, Machine Model.....	-200V to +200V

Note:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
