SMT POWER INDUCTORS

Power Beads - PA4060.XXXHL

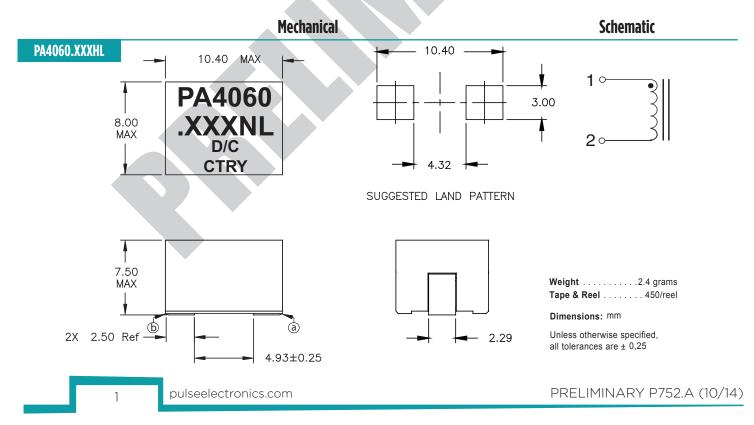

- Current Rating: Over 90Apk
- Inductance Range: 115nH to 300nH
- Height: 7.5mm Max
- Footprint: 10.4mm x 8.0mm Max
- Halogen Free

NOTES:

- 1. Inductance measured at 100kHz, 100mVrms.
- 2. The rated current as listed is either the saturation current at 100°C or the heating current depending on which value is lower.
- 3. The nominal DCR is measured from point (a) to point (b), as shown below on the mechanical drawing.
- 4. The saturation current is the typical current which causes the inductance to drop by 20% at the stated ambient temperatures (25°C, 100°C and 125°C). This current is determined by placing the component in the specified ambient environment and applying a short duration pulse current (to eliminate self-heating effects) to the component.
- 5. The heating current is the DC current which causes the part temperature to increase by approximately 40°C.
- 6. In high volt*time applications, additional heating in the component can occur due to core losses in the inductor which may neccessitate derating the current in order to limit the temperature rise of the component. To determine the approximate total losses (or temperature rise) for a given application, the coreloss and temperature rise curves can be used.
- Optional Tape & Reel packaging can be ordered by adding a "T" suffix to the part number (i.e. PA4060.151HL becomes PA4060.151HLT). Pulse complies to industry standard tape and reel specification EIA481. The tape and reel for this product has a width (W=24mm), pitch (Po=12.0mm) and depth (Ko=8.4mm).
- 8. The temperature of the component (ambient plus temperature rise) must be within the stated operating temperature range.
