

LM339B, LM2901B, LM339, LM239, LM139, LM2901 Quad Differential Comparators

1 Features

- NEW [LM339B](#) and [LM2901B](#)
- Improved specifications of B-version
 - Maximum rating: up to 38 V
 - ESD rating (HBM): 2k V
 - Low input offset: 0.37 mV
 - Low input bias current: 3.5 nA
 - Low supply-current: 200 μ A per comparator
 - Faster response time of 1 μ sec
 - Extended temperature range for LM339B
- B-version is drop-in replacement for LM239, LM339 and LM2901, A and V versions
- Common-mode input voltage range includes ground
- Differential input voltage range equal to maximum-rated supply voltage: \pm 38 V
- Low output saturation voltage
- Output compatible with TTL, MOS, and CMOS
- For single version, see the [TL331B](#)
- For dual version, see the [LM393B](#) or [LM2903B](#)

2 Applications

- [Vacuum robot](#)
- [Single phase UPS](#)
- [Server PSU](#)
- [Cordless power tool](#)
- [Wireless infrastructure](#)
- [Appliances](#)
- [Building automation](#)
- [Factory automation & control](#)
- [Motor drives](#)
- [Infotainment & cluster](#)

3 Description

The [LM339B](#) and [LM2901B](#) devices are the next generation versions of the industry-standard LM339 and LM2901 comparator family. These next generation B-version comparators feature lower offset voltage, higher supply voltage capability, lower supply current, lower input bias current, lower propagation delay, and improved 2 kV ESD performance and input ruggedness through dedicated ESD clamps. The LM339B and LM2901B can drop-in replace the LM239, LM339 and LM2901, for both "A" and "V" grades.

All devices consist of four independent voltage comparators that are designed to operate from a single power supply over a wide range of voltages.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision U (November 2018) to Revision V (December 2022) Page

- Updated the numbering format for tables, figures, and cross-references throughout the document. 1
- Added "B" version throughout. Added Device Family Table. 1

Changes from Revision T (June 2015) to Revision U (November 2018) Page

- Changed LM239x temperature range from 125°C to 85°C in *Description* section..... 1
- Changed data sheet title 1
- Changed LM293AD to LM239AD in *Device Comparison Table* 4
- Added Input Current and related footnote in *Absolute Maximum Ratings* 6
- Changed layout of *Recommended Operating Conditions* temperatures to separate rows..... 7
- Changed values in the Thermal Information table to align with JEDEC standards..... 8
- Added LM2901V and LMV2901AV to LM2901 Elect Char Table title to make more clear which devices are covered..... 12
- Changed "Dual" to "Quad" and removed "Absolute Maximum" wording and mention of Q100 in *Overview* section text..... 22
- Changed and corrected text in *Feature Description* section..... 22
- Changed Example Values in *Typical Application Design Parameters* table 23
- Added *Receiving Notification of Documentation Updates* section..... 27

Changes from Revision S (August 2012) to Revision T (June 2015) Page

- Deleted *Ordering Information* table. 1
- Added Military Disclaimer to *Features* list..... 1
- Added *Applications*, *Device Information* table, *Pin Configuration and Functions* section, *ESD Ratings* table, *Thermal Information* table, *Feature Description* section, *Device Functional Modes, Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section. No specification changes..... 1

(1) Some manufacturers transpose the names of channels 1 & 2. Electrically the pinouts are identical, just a difference in the channel naming convention.

7 Specifications

7.1 Absolute Maximum Ratings for LM339B and LM2901B

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

| | MIN | MAX | UNIT |
|---|------|-----------|------|
| Supply voltage: $V_S = (V+) - (V-)$ | -0.3 | 38 | V |
| Differential input voltage: V_{ID} ⁽²⁾ | | ±38 | V |
| Input pins (IN+, IN-) | -0.3 | 38 | V |
| Current into input pins (IN+, IN-) | | -50 | mA |
| Output pin (OUT) | -0.3 | 38 | V |
| Output sink current | | 25 | mA |
| Output short-circuit duration ⁽³⁾ | | Unlimited | s |
| Junction temperature, T_J | TBD | 150 | °C |
| Storage temperature, T_{stg} | -65 | 150 | °C |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Differential voltages are at IN+ with respect to IN-.
- (3) Short circuits from outputs to V+ can cause excessive heating and eventual destruction.

7.2 Absolute Maximum Ratings for Non-B Versions

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

| | MIN | MAX | UNIT | |
|---|------|------------|------|----|
| V_{CC} Supply voltage ⁽²⁾ | | 36 | V | |
| V_{ID} Differential input voltage ⁽³⁾ | | ±36 | V | |
| V_I Input voltage range (either input) | -0.3 | 36 | V | |
| I_K Input current ⁽⁵⁾ | | -50 | mA | |
| V_O Output voltage | | 36 | V | |
| I_O Output current | | 20 | mA | |
| Duration of output short circuit to ground ⁽⁴⁾ | | Unlimited | | |
| T_J Operating virtual-junction temperature | | 150 | °C | |
| Case temperature for 60 s | | FK package | 260 | °C |
| Lead temperature 1.6 mm (1/16 in) from case for 60 s | | J package | 300 | °C |
| T_{stg} Storage temperature | -65 | 150 | °C | |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential voltages, are with respect to network ground.
- (3) Differential voltages are at xIN+ with respect to xIN-.
- (4) Short circuits from outputs to V_{CC} can cause excessive heating and eventual destruction.
- (5) Input current flows through parasitic diode to ground and will turn on parasitic transistors that will increase I_{CC} and may cause output to be incorrect. Normal operation resumes when input is removed.

7.3 ESD Ratings for LM339B and LM2901B

| | | | VALUE | UNIT |
|--------------------|-------------------------|---|-------|------|
| V _(ESD) | Electrostatic discharge | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾ | ±2000 | V |
| | | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-002 ⁽²⁾ | ±1000 | |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process

7.4 ESD Ratings, Non-B Versions

| | | | VALUE | UNIT |
|--------------------|-------------------------|--|-------|------|
| V _(ESD) | Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾ | ±500 | V |
| | | Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾ | ±750 | |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.5 Recommended Operating Conditions for LM339B and LM2901B

over operating free-air temperature range (unless otherwise noted)

| | MIN | MAX | UNIT |
|---|------------|------------|------|
| Supply voltage: V _S = (V+) – (V–) | 2 | 36 | V |
| Ambient temperature, T _A , LM339B | –40 | 85 | °C |
| Ambient temperature, T _A , LM2901B | –40 | 125 | °C |
| Input Voltage Range, V _{IVR} | (V–) – 0.1 | (V+) – 2.0 | V |

7.6 Recommended Operating Conditions, Non-B Versions

over operating free-air temperature range (unless otherwise noted)

| | | | MIN | MAX | UNIT |
|-----------------|----------------------|---------------|-----|-----|------|
| V _{CC} | Supply voltage | Non-V devices | 2 | 30 | V |
| | | V devices | 2 | 32 | V |

7.9 Electrical Characteristics for LM339B

$V_S = 5\text{ V}$, $V_{CM} = (V-)$; $T_A = 25^\circ\text{C}$ (unless otherwise noted).

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|--------------|--|--|------|------------|------------|------|
| V_{IO} | Input offset voltage | $V_S = 5\text{ to }36\text{V}$ | -3.5 | ± 0.37 | 3.5 | mV |
| | | $V_S = 5\text{ to }36\text{V}$, $T_A = -40^\circ\text{C to }+85^\circ\text{C}$ | -5.5 | | 5.5 | |

| I_{OS} | Input offset current | | -25 | ± 0.5 | 25 | nA |
| | | $T_A = -40^\circ\text{C to }+85^\circ\text{C}$ | -50 | | 50 | nA |
| V_{CM} | Common mode range ⁽¹⁾ | $V_S = 3\text{ to }36\text{V}$ | (V-) | | (V+) - 1.5 | V |
| | | $V_S = 3\text{ to }36\text{V}$, $T_A = -40^\circ\text{C to }+85^\circ\text{C}$ | (V-) | | (V+) - 2.0 | V |
| A_{VD} | Large signal differential voltage amplification ⁽²⁾ | $V_S = 15\text{V}$, $V_O = 1.4\text{V to }11.4\text{V}$; $R_L \geq 15\text{k to } (V+)$ | 50 | 200 | | V/mV |
| V_{OL} | Low level output Voltage {swing from (V-)} | $I_{SINK} \leq 4\text{mA}$, $V_{ID} = -1\text{V}$ | | 110 | 400 | mV |
| | | $I_{SINK} \leq 4\text{mA}$, $V_{ID} = -1\text{V}$ $T_A = -40^\circ\text{C to }+85^\circ\text{C}$ | | | 550 | mV |
| I_{OH-LKG} | High-level output leakage current | (V+) = $V_O = 5\text{V}$; $V_{ID} = 1\text{V}$ | | 0.1 | 50 | nA |
| | | (V+) = $V_O = 36\text{V}$; $V_{ID} = 1\text{V}$ | | | 100 | nA |
| I_{OL} | Low level output current | $V_{OL} = 1.5\text{V}$; $V_{ID} = -1\text{V}$; $V_S = 5\text{V}$ | 6 | 21 | | mA |
| I_Q | Quiescent current (all comparators) | $V_S = 5\text{ V}$, no load | | 0.8 | 1.2 | mA |
| | | $V_S = 36\text{ V}$, no load, $T_A = -40^\circ\text{C to }+85^\circ\text{C}$ | | 1 | 1.6 | mA |

- (1) The voltage at either input should not be allowed to go negative by more than 0.3 V otherwise output may be incorrect and excessive input current can flow. The upper end of the common-mode voltage range is limited by $V_{CC} - 2\text{V}$. However only one input needs to be in the valid common mode range, the other input can go up the maximum V_{CC} level and the comparator provides a proper output state. Either or both inputs can go to maximum V_{CC} level without damage.
- (2) This parameter is ensured by design and/or characterization and is not tested in production.

7.10 Electrical Characteristics for LM2901B

- (1) The voltage at either input should not be allowed to go negative by more than 0.3 V otherwise output may be incorrect and excessive input current can flow. The upper end of the common-mode voltage range is limited by $V_{CC} - 2\text{V}$. However only one input needs to be in the valid common mode range, the other input can go up the maximum V_{CC} level and the comparator provides a proper output state. Either or both inputs can go to maximum V_{CC} level without damage.
- (2) This parameter is ensured by design and/or characterization and is not tested in production.

8 Detailed Description

8.1 Overview

The LMx39 and LM2901x are quad comparators with the ability to operate up to an absolute maximum of 36 V on the supply pin. This standard device has proven ubiquity and versatility across a wide range of applications. This is due to very wide supply voltages range (2 V up to 32 V), low I_q , and fast response of the device.

The open-drain output allows the user to configure the output logic low voltage (V_{OL}) and allows the comparator to be used in AND functionality.

8.2 Functional Block Diagram

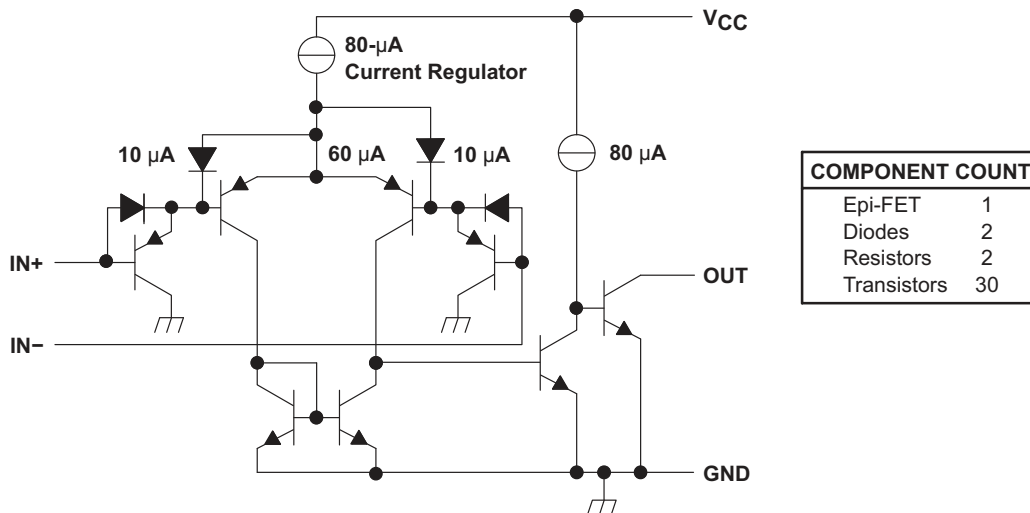

Figure 8-1. Schematic (Each Comparator)

8.3 Feature Description

The comparator consists of a PNP Darlington pair input, allowing the device to operate with very high gain and fast response with minimal input bias current. The input Darlington pair creates a limit on the input common-mode voltage capability, allowing the comparator to accurately function from ground to ($V_{CC} - 1.5$ V) differential input. Allow for ($V_{CC} - 2$ V) at cold temperature.

The output consists of an open-collector NPN (pulldown or low-side) transistor. The output NPN sinks current when the negative input voltage is higher than the positive input voltage and the offset voltage. The V_{OL} is resistive and scales with the output current. See the [Section 7](#) section for V_{OL} values with respect to the output current.

8.4 Device Functional Modes

8.4.1 Voltage Comparison

The comparator operates solely as a voltage comparator, comparing the differential voltage between the positive and negative pins and outputting a logic low or high impedance (logic high with pullup) based on the input differential polarity.

9 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

9.1 Application Information

Typically, a comparator compares either a single signal to a reference, or to two different signals. Many users take advantage of the open-drain output to drive the comparison logic output to a logic voltage level to an MCU or logic device. The wide supply range and high voltage capability makes LMx39 or LM2901x optimal for level shifting to a higher or lower voltage.

9.2 Typical Application

Figure 9-1. Single-ended and Differential Comparator Configurations

9.2.1 Design Requirements

For this design example, use the parameters listed in [Table 9-1](#) as the input parameters.

Table 9-1. Design Parameters

| DESIGN PARAMETER | EXAMPLE VALUE |
|---------------------------------|---------------------------|
| Input Voltage Range | 0 V to $V_{sup}-1.5$ V |
| Supply Voltage | 4.5 V to V_{CC} maximum |
| Logic Supply Voltage | 0 V to V_{CC} maximum |
| Output Current (R_{PULLUP}) | 1 μ A to 4 mA |
| Input Overdrive Voltage | 100 mV |
| Reference Voltage | 2.5 V |
| Load Capacitance (C_L) | 15 pF |

9.2.2 Detailed Design Procedure

When using the LMx39 in a general comparator application, determine the following:

- Input voltage range
- Minimum overdrive voltage
- Output and drive current
- Response time

9.2.2.1 Input Voltage Range

When choosing the input voltage range, the input common-mode voltage range (V_{ICR}) must be taken into account. If temperature operation is above or below 25°C the V_{ICR} can range from 0 V to $V_{CC}-2$ V. This limits the input voltage range to as high as $V_{CC}-2$ V and as low as 0 V. Operation outside of this range can yield incorrect comparisons.

The following list describes the outcomes of some input voltage situations.

- When both IN⁻ and IN⁺ are both within the common-mode range:
 - If IN⁻ is higher than IN⁺ and the offset voltage, the output is low and the output transistor is sinking current
 - If IN⁻ is lower than IN⁺ and the offset voltage, the output is high impedance and the output transistor is not conducting
- When IN⁻ is higher than common mode and IN⁺ is within common mode, the output is low and the output transistor is sinking current
- When IN⁺ is higher than common mode and IN⁻ is within common mode, the output is high impedance and the output transistor is not conducting
- When IN⁻ and IN⁺ are both higher than common mode, the output is low and the output transistor is sinking current

9.2.2.2 Minimum Overdrive Voltage

Overdrive voltage is the differential voltage produced between the positive and negative inputs of the comparator over the offset voltage (V_{IO}). To make an accurate comparison, the overdrive voltage (V_{OD}) must be higher than the input offset voltage (V_{IO}). Overdrive voltage can also determine the response time of the comparator, with the response time decreasing with increasing overdrive. [Figure 9-2](#) and [Figure 9-3](#) show positive and negative response times with respect to overdrive voltage.

9.2.2.3 Output and Drive Current

Output current is determined by the load and pullup resistance and logic and pullup voltage. The output current produces a low-level output voltage (V_{OL}) from the comparator, where V_{OL} is proportional to the output current.

The output current can also effect the transient response.

9.2.2.4 Response Time

Response time is a function of input over-drive. See the [Section 7.19](#) graphs for typical response times. The rise and fall times can be determined by the load capacitance (C_L), load/pull-up resistance (R_{PULLUP}) and equivalent collector-emitter resistance (R_{CE}).

- The rise time (T_R) is approximately $T_R \sim R_{PULLUP} \times C_L$
- The fall time (T_F) is approximately $T_F \sim R_{CE} \times C_L$
 - R_{CE} can be determined by taking the slope of [Figure 7-35](#) in its linear region at the desired temperature, or by dividing the V_{OL} by I_{OUT}

9.2.3 Application Curves

Figure 9-2 and Figure 9-3 were generated with scope probe parasitic capacitance of 50 pF.

10 Power Supply Recommendations

For fast response and comparison applications with noisy or AC inputs, use a bypass capacitor on the supply pin to reject any variation on the supply voltage. This variation can affect the common-mode range of the comparator input and create an inaccurate comparison.

11 Layout

11.1 Layout Guidelines

To create an accurate comparator application without hysteresis, maintain a stable power supply with minimized noise and glitches, which can affect the high level input common-mode voltage range. To achieve this accuracy, add a bypass capacitor between the supply voltage and ground. Place a bypass capacitor on the positive power supply and negative supply (if available).

Note

If a negative supply is not being used, do not place a capacitor between the GND pin of the device and system ground.

12.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

12.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

12.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

12.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser based versions of this data sheet, refer to the left hand navigation.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](https://www.ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
