Is Now Part of

ON Semiconductor®

To learn more about ON Semiconductor, please visit our website at
www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

FXL4245
Low-Voltage, Dual-Supply, 8-Bit, Signal Translator with Configurable Voltage Supplies, Signal Levels, and 3-State Outputs

Features

- Bi-Directional Interface between Two Levels from 1.1 V to 3.6 V
- Fully Configurable, Inputs Track V_{CC} Level
- Non-Preferential Power-up; Either V_{CC} May Be Powered-up First
- Outputs Remain in 3-State until Active V_{CC} Level is Reached
- Outputs Switch to 3-State if Either V_{CC} is at GND
- Power-Off Protection
- Control Inputs (T/$\overline{R}$, $\overline{OE}$) Levels are Referenced To V_{CCA} Voltage
- Packaged in 24-Pin MLP
- ESD Protection Exceeds:
  - 4 kV Human Body Model (per JESD22-A114 & Mil Std 883e 3015.7)
  - 8 kV Human Body Model I/O to GND (per JESD22-A114 & Mil Std 883e 3015.7)
  - 1 kV Charge Device Model (per ESD STM 5.3)
  - 200 V Machine Model (per JESD22-A115 & ESD STM5.2)

Description

The FXL4245 is a configurable dual-voltage-supply translator designed for bi-directional voltage translation of signals between two voltage levels. The device allows translation between voltages as high as 3.6 V to as low as 1.1 V. The A port tracks the V_{CCA} level and the B port tracks the V_{CCB} level. Both ports are designed to accept supply voltage levels from 1.1 V to 3.6 V. This allows for bi-directional voltage translation over a variety of voltage levels: 1.2 V, 1.5 V, 1.8 V, 2.5 V, and 3.3 V.

The device remains in 3-state until both V_{CC}s reach active levels, allowing either V_{CC} to be powered-up first. The device also contains power-down control circuits that place the device in 3-state if either V_{CC} is removed.

The Transmit/Receive (T/$\overline{R}$) input determines the direction of data flow through the device. The $\overline{OE}$ input, when HIGH, disables both the A and B ports by placing them in a 3-state condition. The FXL4245 is designed with the control pins (T/$\overline{R}$ and $\overline{OE}$) supplied by V_{CCA}.

Ordering Information

Part Number	Package	Packing Method
FXL4245MPX	24-Pin Molded Leadless Package (MLP), JEDEC MO-220, 3.5 x 4.5 mm	Tape and Reel

Pin Configuration

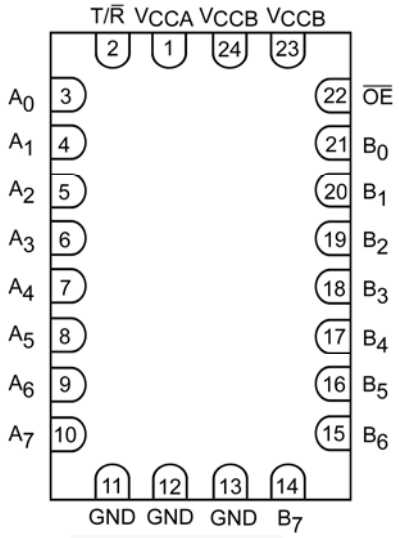

Figure 1. Pin Configuration (Top Through View)

Pin Definitions

Pin #	Name	Description
1	V_{CCA}	Side-A Power Supply
2	$T/\overline{R}$	Transmit / Receive Input
3, 4, 5, 6, 7, 8, 9, 10	A_0, A_1, A_2, A_3, A_4, A_5, A_6, A_7	Side-A Inputs or 3-State Outputs
11, 12, 13	GND	Ground
14, 15, 16, 17, 18, 19, 20, 21	B_7, B_6, B_5, B_4, B_3, B_2, B_1, B_0	Side-B Inputs or 3-State Outputs
22	$\overline{OE}$	Output Enable Input
23, 24	V_{CCB}	Side-B Power Supply
DAP	No Connect	No Connect

Truth Table

Inputs		Description
$\overline{OE}$	$T/\overline{R}$	
LOW Voltage Level	LOW Voltage Level	Bus B Data to Bus A
LOW Voltage Level	HIGH Voltage Level	Bus A Data to Bus B
HIGH Voltage Level	Don't Care	3-State

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Conditions		Min.	Max.	Unit
V_{CCA}	Supply Voltage			-0.5	4.6	V
V_{CCB}				-0.5	4.6	
V_I	DC Input Voltage	I/O Port A		-0.5	4.6	V
		I/O Port B		-0.5	4.6	
		Control Inputs ($T/\overline{R}$, $\overline{OE}$)		-0.5	4.6

I_{OK}	DC Output Diode Current	V_O < 0 V			-50	mA
		V_O > V_{CC}			50	
I_{OH}/I_{OL}	DC Output Source/Sink Current				±50	mA
I_{CC}	DC V_{CC} or Ground Current per Supply Pin				±100	mA
T_{STG}	Storage Temperature Range			-65	+150	°C
ESD	Electrostatic Discharge Capability	Human Body Model, JESD22-A114, Mil Std 883e 3015.7			4	kV
			I/O to GND		8	
		Charged Device Model, JESD22-C101,STM 5.3			1	
		Machine Model, JESD22-A115,STM 5.2			200	V

Note:
1. I/O absolute maximum ratings must be observed.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Conditions		Min.	Max.	Unit
V_{CC}	Power Supply	Operating V_{CCA} or V_{CCB}		1.1	3.6	V
V_I	Input Voltage	Port A		0	3.6	V
		Port B		0	3.6	
		Control Inputs ($T/\overline{R}$, $\overline{OE}$)		0	V_{CCA}	
I_{OH}/I_{OL}	Output Current	V_{CC0}	3.0 V to 3.6 V		±24	mA
			2.3 V to 2.7 V		±18	
			1.65 V to 1.95 V		±6	
			1.40 V to 1.65 V		±2	
			1.1 V to 1.4 V		±0.5	
T_A	Operating Temperature, Free Air			-40	+85	°C
$\Delta V/\Delta t$	Minimum Input Edge Rate	$V_{CCA/B}$ =1.1 V to 3.6 V			10	ns/V

Note:
2. All unused inputs must be held at V_{CCI} or GND.

Electrical Characteristics

Symbol	Parameter	Conditions	V_{CCI} (V)	V_{CCO} (V)	Min.	Max.	Units

Functional Description

Power-Up/Power-Down Sequencing

FXL translators offer an advantage in that either V_{CC} may be powered up first. This benefit derives from the chip design. When either V_{CC} is at 0 V, outputs are in a High-impedance state. The control inputs (T/$\overline{R}$ and $\overline{OE}$) are designed to track the V_{CCA} supply. A pull-up resistor tying $\overline{OE}$ to V_{CCA} should be used to ensure that bus contention, excessive currents, or oscillations do not occur during power-up/power-down. The size of the pull-up resistor is based upon the current-sinking capability of the OE driver.

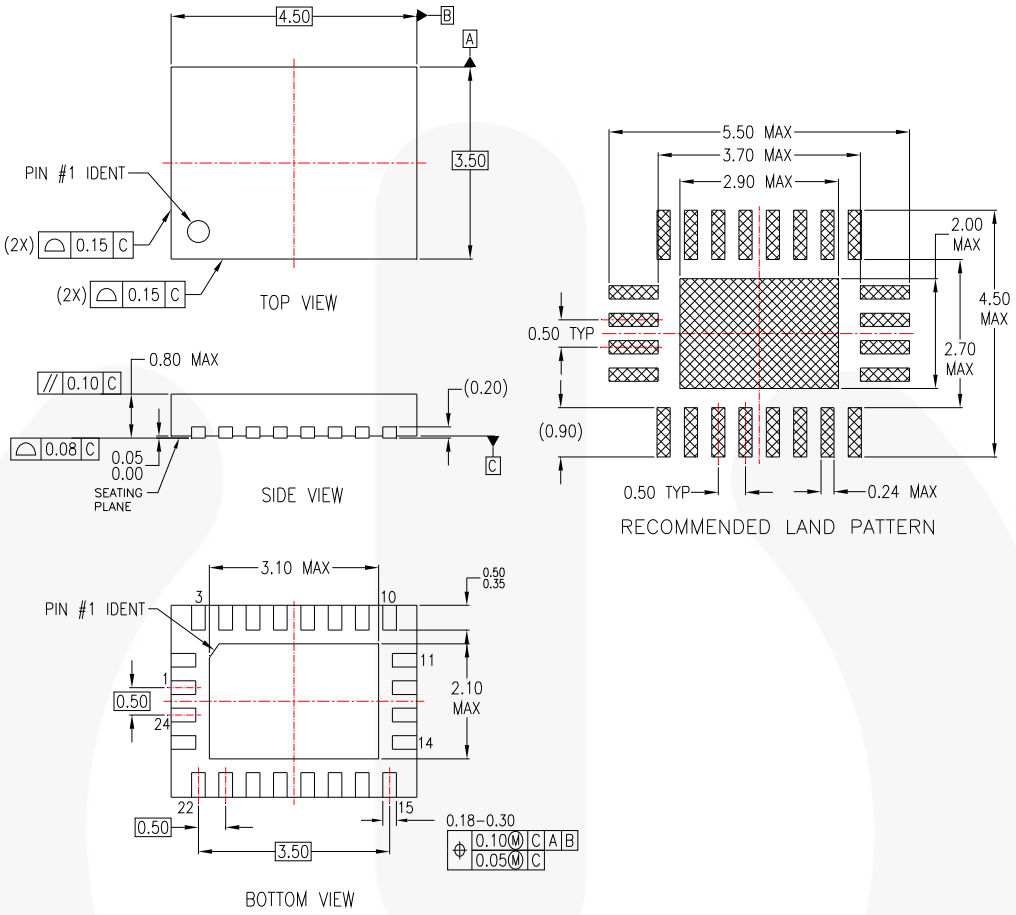
The recommended power-up sequence is:

1. Apply power to either V_{CC}.
2. Apply power to the T/$\overline{R}$ input (logic HIGH for A-to-B operation; logic LOW for B-to-A operation) and to the respective data inputs (A port or B port). This may occur at the same time as step 1.
3. Apply power to the other V_{CC}.
4. Drive the $\overline{OE}$ input LOW to enable the device.

The recommended power-down sequence is:

1. Drive $\overline{OE}$ input HIGH to disable the device.
2. Remove power from either V_{CC}.
3. Remove power from the other V_{CC}.

Physical Dimensions



NOTES:

A. CONFORMS TO JEDEC REGISTRATION MO-220, VARIATION WFSD-2 FOR DIMENSIONS ONLY. PIN NUMBERING DOES NOT COMPLY.

B. DIMENSIONS ARE IN MILLIMETERS.

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS

Definition of Terms

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.

Rev. I68
