EPC2108 – Enhancement-Mode GaN Power Transistor Half-Bridge with Integrated Synchronous Bootstrap

V_{DS} , 60 V
$R_{DS(on)}$, 240 mΩ
I_D , 1.7 A

Gallium Nitride's exceptionally high electron mobility and low temperature coefficient allows very low $R_{DS(on)}$, while its lateral device structure and majority carrier diode provide exceptionally low Q_G and zero Q_{RR}. The end result is a device that can handle tasks where very high switching frequency, and low on-time are beneficial as well as those where on-state losses dominate.
